Safety in the handling of burn victims

Wappler/Spilker (Eds): Verbrennungsmedizin

Burn Care Medicine – From the Site of Accident to Rehabilitation

Dec. 2008, 280 pp., 90 ill., € 69.95, TN 145011, K&P

In cases of severe burns, a life-threatening situation may occur as the entire metabolism is impaired. Rapid and correct action is essential in order to ensure the most favorable prognosis. Non-specialized casualty physicians and intensive therapists require fundamentals and specific instructions for the correct handling of burn victims.

Safety in the handling of burn victims

- **Extensive survey:** Burns from a multidisciplinary point of view
- **Accurate, concise, and clear:** For all non-specialized casualty physicians and intensive therapists performing primary care for burn victims
- **Acting competently and confidently:** Specific instructions, tips and advice on important sources for error, expert tips
- **Multidisciplinary:** Taking into consideration all medical aspects that need to be considered in relation to burns such as wound management, pain therapy, volume substitution, reconstructive surgery, infection prophylaxis, physiotherapy, care, and psychological counseling

User groups: Intensive therapists from all disciplines, casualty physicians, rehabilitation centers for burn victims, dermatologists

Series: Dentistry Checklists

Hülsmann: Endodontologie

Endodontics

Jul. 2008, 340 pp., 430 colored ill., € 69.95, TN 138251, K&P

The only possibility of conserving a tooth damaged but still worth saving is root canal treatment. Principally any tooth should be considered worth saving if its structure is largely intact and whose status is periodontally acceptable. Endodontic treatment, however, is difficult and protracted.

Abridged presentation of endodontic treatment

All essentials at a glance

- Everything dentists need to know about endodontics
- Concise and accurately written – pure endodontics
- More than 400 colored pictures and drawings illustrate how to proceed.
- No theoretical ballast – much rather **knowledge for practice**
- The plus: Tips and tricks from an **expert**

User groups: Dentists, dentistry students

IMAGING / RADIOLOGY

Expert knowledge for diagnostics and differential diagnostics

Uhl/Herget: Radiologische Diagnostik von Knochentumoren

Radiological Diagnostics of Bone Tumors

May 2008, 240 pp., 370 ill., € 99.95, TN 145661, K&P

The diagnostics of bone tumors is complex and requires extensive knowledge: In x-rays, tumors must be distinguished from non-cancerous bone diseases and the large variety of such lesions must be known. It is important to have experience in radiological morphology of bone tumors, knowledge of the typical localization of individual tumors, and the correct interpretation of emitted signals in MR tomograms.

Expert knowledge for diagnostics and differential diagnosis

- **Up-to-date state of knowledge:** Radiological diagnostics of bone tumors, tumor-like bone lesions, skeletal metastases, and their differential diagnoses
- **Correct and sure diagnoses, no oversights, exact medical findings:** Exemplary cases with impressive illustrations, epidemiology, localization, x-ray symptomatology, prognosis, differential diagnosis
- **The picture book of bone tumors:** Outstanding graphic material
- Main focus: **Diagnostic imaging procedures (CT/MRI)**, scintigraphy, and PET-CT
- Expert knowledge by renowned bone tumor specialists from the WHO reference center in Freiburg, Germany

User groups: Radiologists in clinic or practice, orthopedists, oncologists

INTERNAL MEDICINE / CARDIOLOGY

The perfect companion

Pocket Atlas Neurology

3rd updated ed. Nov. 2008, 560 pp., 190 four-colored ill. and tables, € 39.95, TN 124193, K&P

Physicians from various medical disciplines are confronted by neurologic questions. Hardly any other medical discipline distinguishes itself by such complexity and abstraction as does neurology. Knowledge of the structure and function of neurologic systems is essential for diagnosis and therapy.

Neurology made visible

Concise and illustrative presentation of complex matters

- Anatomic-physiological fundamentals
- Diagnostic methods and procedures
- Neurological clinical pictures: Causes, symptoms, findings, and therapeutic advice

Excellent didactic presentation – in the proven pocket atlas concept

- Double-page principle with side-by-side presentation of illustrations and corresponding texts
- Optimal orientation with the help of a color-coded guiding system
- Numerous, unique illustrations, elaborately drawn and with careful inscriptions

New features

- All chapters have been completely revised.
- Consistently structured presentation of neurologic functional disorders and clinical pictures, pathogenesis, findings, and differential diagnostic classifications, therapeutic advice
- Rapid orientation in the extensive index of tables

ORTHOPEDICS

Clear and concise guide

Bläsius et al.: Nachbehandlungsfibel Orthopädie und Unfallchirurgie

Aftercare Primer Orthopedics and Trauma Surgery

2nd revised and extended ed. Apr. 2008, 160 pp., € 19.95, TN 775002, K&P

Every operation requires aftercare. Both ward physicians and physicians carrying on treatment of discharged patients require information on follow-up procedures. Not every medical report is available in time and contains complete, interpretable and practical information on aftercare. Physicians concerned with aftercare are frequently on their own.

- **Clear and concise guide** on the most frequent interventions – quickly available information directly at the sickbed
- Quick help for questions concerning aftercare, including those asked by patients
- Help in cases of unintelligible and/or incomplete medical reports
- Revision of one's level of knowledge and simplification of selecting correct procedures

New features

- **Including trauma surgery**
- Including ICS-10 codes
- Rapid correlation of correct diagnostic codes

From the contents:

- About **150 therapeutic regimes** on all important interventions
- Consistently structured information on diagnosis, operation as well as the pre- and postoperative, in- and outpatient phases
- Closing of the gap between surgeon and aftercare physicians

User groups: Orthopedists, trauma surgeons, or general surgeons in training, clinic or practice
