

Free Radicals: Fundamentals and Applications in Organic Synthesis 2

	Preface	V
	Abstracts	XI
	Table of Contents	XXI
2.1	Organic Electron Donors in Electron-Transfer Reactions K. F. Clark, D. Dimitrova, and J. A. Murphy	1
2.2	Samarium-Mediated Reductions R. A. Flowers, II, T. V. Chciuk, and C. O. Bartulovich	83
2.3	Single-Electron-Transfer Oxidation and Reduction Involving Metal Complexes other than Samarium M. Cormier and J.-P. Goddard ^{ORCID}	119
2.4	Redox-Active Ligands in Catalysis for Single-Electron-Transfer Processes Y. Ren, A. Das, ^{ORCID} C. Hessin, and M. Desage-El Murr ^{ORCID}	181
2.5	Radical–Polar Crossover Reactions F. Chemla and A. Pérez-Luna ^{ORCID}	209
2.6	Generation of Carbon-Centered Radicals by Photochemical Methods M. Fagnoni, ^{ORCID} D. Ravelli, ^{ORCID} and S. Protti ^{ORCID}	339
2.7	Radical Cascade Reactions Z.-Q. Liu ^{ORCID}	359
2.8	Selective Radical Fluorinations T. G. Bolduc, B. Thomson, and G. M. Sammis	387
2.9	Electrochemical Organic Synthesis via Radical Species K. Mitsudo and S. Suga	433
2.10	Radical Chemistry in Flow S. Sumino, ^{ORCID} T. Fukuyama, ^{ORCID} and I. Ryu ^{ORCID}	459
2.11	Radical–Radical Cross-Coupling Reactions M. Zhou and T. Qin ^{ORCID}	483

2.12	Asymmetric Catalysis of Radical Reactions	
	H. Subramanian and M. P. Sibi	539
2.13	Recent Developments in Reversible Deactivation Radical Polymerization	
	S. Yamago and Y. Lu	575
	Keyword Index	607
	Author Index	641
	Abbreviations	667

Table of Contents

2.1	Organic Electron Donors in Electron-Transfer Reactions K. F. Clark, D. Dimitrova, and J. A. Murphy	
<hr/>		
2.1	Organic Electron Donors in Electron-Transfer Reactions	1
2.1.1	Electron-Rich Neutral and Anionic Organic Electron Donors	2
2.1.2	Photoexcited Organic Dyes as Electron Donors	42
2.1.3	Electron Transfer with Weak Organic Electron Donors	69
2.1.4	Conclusion	78
2.2	Samarium-Mediated Reductions R. A. Flowers, II, T. V. Chciuk, and C. O. Bartulovich	
<hr/>		
2.2	Samarium-Mediated Reductions	83
2.2.1	Synthesis of Samarium(II) Reductants	83
2.2.1.1	Samarium(II) Iodide	84
2.2.1.1.1	Synthesis in Tetrahydrofuran from Samarium and 1,2-Diiodoethane	84
2.2.1.1.2	Synthesis in Tetrahydrofuran from Samarium and Iodine	85
2.2.1.2	Samarium(II) Bromide	85
2.2.1.2.1	Synthesis from Samarium(II) Iodide and Lithium Bromide/Tetrabutylammonium Bromide	86
2.2.1.2.2	Synthesis from Samarium and 1,1,2,2-Tetrabromoethane	87
2.2.1.3	Samarium(II) Chloride	87
2.2.1.3.1	Synthesis from Samarium(II) Iodide and Lithium Chloride/Tetrabutylammonium Chloride	87
2.2.1.3.2	Synthesis from Samarium(III) Chloride	88
2.2.2	Reductions	88
2.2.2.1	Reduction of Halides	88
2.2.2.2	Reduction of C=C and C≡C Bonds	90
2.2.2.3	Reduction of Carbon–Oxygen Bonds	93
2.2.2.4	Reduction of Nitriles	98
2.2.3	C–C Bond Forming Reactions	99
2.2.3.1	Barbier Couplings	99
2.2.3.2	Halide–Alkene Couplings	101
2.2.3.3	Pinacol Couplings	104
2.2.3.4	Reformatsky Reactions	105
2.2.3.5	Carbonyl–Alkene Coupling and Related Reactions	107

2.2.4	Catalytic Reactions	111
2.2.4.1	Approaches Employing Terminal Reductants	111
2.2.4.2	Radical Relay Reactions	114
2.3	Single-Electron-Transfer Oxidation and Reduction Involving Metal Complexes other than Samarium	
	M. Cormier and J.-P. Goddard 	
2.3	Single-Electron-Transfer Oxidation and Reduction Involving Metal Complexes other than Samarium	119
2.3.1	Single-Electron-Transfer Oxidation Involving Metal Complexes	119
2.3.1.1	Activation of Enols and Enolates	120
2.3.1.1.1	Oxidation of 1,3-Dicarbonyl Derivatives	120
2.3.1.1.2	Oxidation of Enolates	123
2.3.1.1.3	Oxidation of Silyl Enol Ethers	126
2.3.1.1.4	Oxidation of α -Sulfinyl Carbanions	128
2.3.1.2	Hydrofunctionalization of Alkenes	130
2.3.1.2.1	Formation of C—O Bonds	131
2.3.1.2.2	Formation of C—N Bonds	132
2.3.1.2.3	Formation of C—C Bonds	134
2.3.1.3	C—H Activation	137
2.3.1.4	Activation of Aromatics: Arylation	141
2.3.1.5	Oxidation of Nitrogen-Containing Molecules	143
2.3.1.5.1	Oxidation of Amines	144
2.3.1.5.2	Oxidation of Hydrazines and Derivatives	145
2.3.1.6	Phosphorylation	146
2.3.1.6.1	Phosphorylation of Alkenes	146
2.3.1.6.2	Phosphorylation of Arenes	147
2.3.1.7	Activation of Alcohols	148
2.3.1.7.1	Alcohol Activation with Ring Opening	148
2.3.1.7.2	Activation of Acyclic Alcohols	150
2.3.2	Single-Electron-Transfer Reduction Involving Metal Complexes	151
2.3.2.1	Single-Electron-Transfer Reduction of Organohalides and Analogues	151
2.3.2.1.1	Single-Electron-Transfer Reduction of Alkyl Halides	151
2.3.2.1.2	Single-Electron-Transfer Reduction of Fluoro and Perfluoroalkyl Halides	157
2.3.2.1.3	Single-Electron-Transfer Reduction of Aryl Halides and Analogues	159
2.3.2.2	Single-Electron-Transfer Reduction of Epoxides	161
2.3.2.3	Single-Electron-Transfer Reduction of Carbonyl Derivatives and Analogues	163

2.3.3	Asymmetric Reactions Involving Single-Electron Transfer with Metal Complexes	163
2.3.3.1	Chiral Auxiliaries in Reactions Involving Single-Electron Transfer	163
2.3.3.2	Chiral Catalysts in Reactions Involving Single-Electron Transfer	166
2.3.3.2.1	Organocatalysts in Asymmetric Reactions Involving Single-Electron Transfer	166
2.3.3.2.1.1	Enamine Oxidations	167
2.3.3.2.1.2	Brønsted Acid Catalysts	169
2.3.3.2.2	Organometallic Catalysts in Asymmetric Reactions Involving Single-Electron Transfer	171
2.3.3.2.2.1	Copper-Catalyzed Asymmetric Radical Additions	171
2.3.3.2.2.2	Enantioselective Cobalt(II)-Based Metalloradical Catalysis	172
2.3.3.2.2.3	Enantioselective Titanium(III)-Catalyzed Reductive Cyclization	173
2.3.3.2.2.4	Enantioselective BINOL Synthesis	175
2.4	Redox-Active Ligands in Catalysis for Single-Electron-Transfer Processes Y. Ren, A. Das, ^{1b} C. Hessin, and M. Desage-El Murr ^{1b}	
2.4	Redox-Active Ligands in Catalysis for Single-Electron-Transfer Processes	181
2.4.1	Nitrene Radicals and Redox-Active Ligands	181
2.4.1.1	Aziridination via Nitrene Radicals Involving Redox-Active Ligands	182
2.4.1.2	C–H Amination via Nitrene Radicals Involving Redox-Active Ligands	195
2.4.2	Carbene Radicals and Redox-Active Ligands	197
2.4.2.1	Cyclopropanation Using Cobalt Catalysts	198
2.4.2.2	Cyclopropanation Using Copper Catalysts	201
2.4.3	Trifluoromethyl Radicals and Redox-Active Ligands	202
2.4.4	Conclusion	205
2.5	Radical–Polar Crossover Reactions F. Chemla and A. Pérez-Luna ^{1b}	
2.5	Radical–Polar Crossover Reactions	209
2.5.1	Tandem Transformations Relying on Oxidative Radical-to-Cation Crossover Reactions	211
2.5.1.1	Radical-to-Cation Oxidation by Organic Oxidants	212
2.5.1.1.1	Tetrathiafulvalene-Mediated Reactions	212
2.5.1.1.2	Iodine(III)-Mediated Reactions	217
2.5.1.1.3	Radical Oxidation by Dimethyl Sulfoxide	219
2.5.1.1.4	Radical-to-Cation Oxidation in Reactions of “Ate” Complexes of Vinylboronic Esters	220

2.5.1.1.5	Radical Oxidation by Organic Photoredox Catalysts	224
2.5.1.2	Radical-to-Cation Oxidation by Organometallic Oxidants	229
2.5.1.2.1	Reactions Involving Enolizable Carbonyl Compounds as Radical Precursors	229
2.5.1.2.2	Reactions Involving α -Halo Ketones, Esters, and Related Compounds as Radical Precursors	239
2.5.1.2.3	Reactions Involving Organometallic Species as Radical Precursors	242
2.5.1.2.4	Reactions Initiated by Fragmentation of Peroxides with Metal Oxidants	250
2.5.1.2.5	Reactions with Azidotrimethylsilane as Radical Precursor	253
2.5.1.2.6	Radical-to-Cation Crossover Reactions in Photocatalytic Processes with Organometallic Catalysts	254
2.5.1.3	Electrochemical Oxidation	267
2.5.2	Tandem Transformations Relying on Reductive Radical-to-Anion Crossover Reactions	267
2.5.2.1	Radical-to-Anion Reduction by Zerovalent Metals	268
2.5.2.1.1	Reduction by Zinc Metal	269
2.5.2.1.2	Reduction by Manganese Metal	272
2.5.2.2	Radical-to-Anion Reduction upon Addition to Metal Centers	274
2.5.2.2.1	Addition to Chromium Complexes	275
2.5.2.2.2	Addition to Samarium(II) Iodide	277
2.5.2.2.2.1	Organic Halide/Alkene Cyclizations	277
2.5.2.2.2.2	Carbonyl/Alkene Cyclizations	281
2.5.2.2.3	Addition to Nickel or Palladium Complexes	289
2.5.2.2.4	Addition to Manganese Complexes	291
2.5.2.2.5	Addition to Iron Complexes	292
2.5.2.3	Radical-to-Anion Reduction upon Homolytic Substitution at Metal Centers	294
2.5.2.3.1	Homolytic Substitution at Boron	295
2.5.2.3.1.1	Radical–Polar Crossover Reactions Leading to Boron Enolates	295
2.5.2.3.1.2	Radical–Polar Crossover Reactions Leading to Boron Amides	297
2.5.2.3.2	Homolytic Substitution at Zinc	299
2.5.2.3.2.1	Radical–Polar Crossover Reactions Leading to Zinc Enolates	299
2.5.2.3.2.2	Radical–Polar Crossover Reactions Leading to Alkylzinc Species	304
2.5.2.3.2.3	Radical–Polar Crossover Reactions Leading to Alkenylzinc Species	306
2.5.2.4	Radical-to-Anion Reduction by Photoredox Catalysts	313
2.5.2.4.1	Synthesis of Cycloalkanes by Tandem Radical Addition/Intramolecular Alkylation of Alkenes	314
2.5.2.4.2	Synthesis of Geminal Difluoroalkenes by Tandem Radical Addition/ β -Fluoride Elimination of (Trifluoromethyl)alkenes	319
2.5.2.4.3	Synthesis of Carboxylic Acids by Tandem Radical Reaction/Polar Carboxylation	320

2.5.2.4.4	Synthesis of Saturated Nitrogen Heterocycles by Tandem Radical Addition/ Intramolecular N-Alkylation	321
2.5.3	Tandem Transformations Relying on Oxidative Anion-to-Radical Crossover Reactions	322
2.5.3.1	Anion Oxidation by Ferrocenium Cation	323
2.6	Generation of Carbon-Centered Radicals by Photochemical Methods M. Fagnoni, D. Ravelli, and S. Protti	
2.6	Generation of Carbon-Centered Radicals by Photochemical Methods	339
2.6.1	Alkynyl Radicals	342
2.6.2	Aryl Radicals	343
2.6.3	Vinyl Radicals	344
2.6.4	Acyl Radicals	344
2.6.5	Carbamoyl Radicals	345
2.6.6	Benzyl Radicals	347
2.6.7	Allyl Radicals	348
2.6.8	Propargyl Radicals	348
2.6.9	Alkyl Radicals	350
2.6.10	α -Amino Radicals	351
2.6.11	α -Oxy Radicals	352
2.6.12	Trifluoromethyl Radicals	353
2.6.13	α -Keto Radicals	354
2.6.14	Conclusion	355
2.7	Radical Cascade Reactions Z.-Q. Liu	
2.7	Radical Cascade Reactions	359
2.7.1	Intramolecular Radical Cascade Reactions	361
2.7.1.1	Relay by Cyclization	361
2.7.1.2	Relay by Hydrogen-Atom Transfer	363
2.7.1.3	Relay by 1,n-Migration	364
2.7.1.4	Relay by Ring Opening	368
2.7.1.5	Relay by β -Scission	369
2.7.1.6	Relay by Spin-Center Shift	373
2.7.2	Intermolecular Radical Cascade Reactions	374
2.7.2.1	Relay by an Alkene	374
2.7.2.2	Relay by an Alkyne	375

2.7.2.3	Relay by an Isocyanide	376
2.7.2.4	Relay by Carbon Monoxide	378
2.7.2.5	Relay by Sulfur Dioxide	379
2.7.2.6	Relay by Oxygen	381
2.7.3	Radical Cascade Reactions Involving Mixed Events	382
2.8	Selective Radical Fluorinations	
	T. G. Bolduc, B. Thomson, and G. M. Sammis	
2.8	Selective Radical Fluorinations	387
2.8.1	Sources of Atomic Fluorine	387
2.8.1.1	Fluorine Gas	387
2.8.1.2	Fluoroxy Reagents and Hypofluorites	388
2.8.1.3	Xenon Difluoride	388
2.8.1.4	N–F Reagents	388
2.8.1.5	Metal Fluoride Reagents	388
2.8.2	Methods of Radical Fluorination	390
2.8.2.1	Fluorodecarboxylations	390
2.8.2.2	Fluorination of Alkenes	394
2.8.2.2.1	Hydrofluorinations of Alkenes	394
2.8.2.2.2	Aminofluorinations of Alkenes	399
2.8.2.2.3	Carbofluorinations of Alkenes	404
2.8.2.3	Fluorination of Boron Derivatives	406
2.8.2.4	C(sp ³)–H Activations	410
2.8.2.4.1	Radical Fluorinations of Aliphatic C(sp ³) Centers	410
2.8.2.4.2	Radical Fluorinations of Benzylic C(sp ³) Centers	416
2.8.2.5	C(sp ³)–C(sp ³) Activations	419
2.8.2.6	Deoxyfluorinations	422
2.8.2.7	Other Fluorination Processes	426
2.8.3	Conclusion	427
2.9	Electrochemical Organic Synthesis via Radical Species	
	K. Mitsudo and S. Suga	
2.9	Electrochemical Organic Synthesis via Radical Species	433
2.9.1	Electrochemical Oxidations	434
2.9.1.1	Transformations via Nitrogen-Centered Radicals	434
2.9.1.2	Transformations via Sulfur-Centered Radicals	442

2.9.1.3	Transformations via Carbon-Centered Radicals	448
2.9.1.4	Other Transformations	449
2.9.2	Electrochemical Reductions	450
2.9.2.1	Transformations via Reduction of a C–X Bond	450
2.9.2.2	Transformations via Reduction of a C=X Bond	454
2.9.2.3	Transformations Using Transition Metals	455
2.9.2.4	Other Transformations	456
2.9.3	Conclusion	457
2.10	Radical Chemistry in Flow S. Sumino, T. Fukuyama, and I. Ryu	
2.10	Radical Chemistry in Flow	459
2.10.1	Flow Radical Reductions	460
2.10.2	Flow Radical Cyclizations	463
2.10.3	Flow Radical Carbonylations	465
2.10.4	Flow Radical Additions onto Unsaturated C–C Bonds	467
2.10.5	Flow Radical Halogenations	469
2.10.6	Flow Radical C–H Functionalizations	473
2.10.7	Flow Photoredox Reactions	477
2.10.8	Conclusion	480
2.11	Radical–Radical Cross-Coupling Reactions M. Zhou and T. Qin	
2.11	Radical–Radical Cross-Coupling Reactions	483
2.11.1	The Persistent-Radical Effect	484
2.11.1.1	Early Examples of the Persistent-Radical Effect	484
2.11.1.2	Tuning Radical Reactivity	486
2.11.2	Thermally Induced Radical–Radical Cross Couplings	487
2.11.3	Lewis Acid Promoted Radical–Radical Cross Couplings	503
2.11.4	Lewis Base Promoted Radical–Radical Cross Couplings	505
2.11.5	Electrolysis-Mediated Radical–Radical Cross Coupling	512
2.11.6	Photoinduced Radical–Radical Cross Coupling	517
2.11.7	Transition-Metal-Mediated Radical–Radical Cross Coupling	525
2.11.8	Conclusion	533

2.12	Asymmetric Catalysis of Radical Reactions H. Subramanian and M. P. Sibi	
<hr/>		
2.12	Asymmetric Catalysis of Radical Reactions	539
2.12.1	Asymmetric Lewis Acid Catalyzed Radical Reactions	539
2.12.2	Asymmetric Secondary Amine Catalyzed Radical Reactions (Iminium Catalysis)	545
2.12.3	Asymmetric Radical Reactions Catalyzed by Chiral Brønsted Acids	549
2.12.4	Asymmetric Transition-Metal-Catalyzed Radical Reactions	551
2.12.4.1	Nickel- and Cobalt-Catalyzed Asymmetric Radical Processes	551
2.12.4.2	Copper-Catalyzed Asymmetric Radical Reactions	556
2.12.4.3	Titanocene-Catalyzed Asymmetric Radical Reactions	560
2.12.5	Photoredox Catalysis in Asymmetric Radical Processes	564
2.12.5.1	Iridium- and Rhodium-Catalyzed Asymmetric Radical Processes	564
2.12.5.2	Organophotoredox Catalysis in Asymmetric Radical Processes	567
2.12.6	N-Heterocyclic Carbene Catalyzed Asymmetric Radical Processes	569
2.12.7	Conclusion	571
2.13	Recent Developments in Reversible Deactivation Radical Polymerization S. Yamago and Y. Lu	
<hr/>		
2.13	Recent Developments in Reversible Deactivation Radical Polymerization	575
2.13.1	Expansion of Synthetic Scope: Application to Unconjugated Monomers	576
2.13.1.1	Controlled Polymerization of Vinyl Acetate	577
2.13.1.2	Controlled Polymerization of Acyclic <i>N</i> -Vinylamides	579
2.13.1.3	Controlled Polymerization of Vinylidene Fluoride	581
2.13.1.4	Controlled Homo- and Copolymerization of Ethene	582
2.13.1.5	Controlled Polymerization of Vinyl Ethers	588
2.13.1.6	Controlled Polymerization of Vinylboronates	590
2.13.2	Synthesis of Structurally Controlled Highly Branched Polymers	591
2.13.3	Photoinduced Reversible Deactivation Radical Polymerization	594
2.13.3.1	Direct Photolysis of C–X Bonds	595
2.13.3.1.1	Photoreversible Addition–Fragmentation Chain-Transfer Radical Polymerization by Direct C–S Bond Photolysis	595
2.13.3.1.2	Photoinduced Organotellurium-Mediated Radical Polymerization and Radical Coupling Reactions	596

2.13.3.2	Photocatalysis	597
2.13.3.2.1	Atom-Transfer Radical Polymerization Catalyzed by a Photocatalyst	598
2.13.3.2.2	Reversible Addition–Fragmentation Chain-Transfer Radical Polymerization Catalyzed by a Photocatalyst	600
2.13.3.2.3	Iodine-Mediated Radical Polymerization Catalyzed by Photoinduced Energy Transfer	602
2.13.4	Conclusion	603
