
Release: SOS 4.15, September 2019

Software

The start/query page has been redesigned to show users that Science of Synthesis is **much more than just a database.**

The text-search bar remains central to the page, but the drawing tool has been minimized, and is accessed by simply clicking on "Draw". A broader window within the drawing tool gives users more space and freedom to draw their molecules and reactions. All search functionalities remain unaffected.

Below the search bar, the full scope of SOS is presented, with clickable links to the relevant content. Current hot topics covered in the Science of Synthesis Reference Library are presented in the "Trends and Innovation" tile, while the unique organizational structure at the core of SOS, with synthetic methodology reviews being grouped by molecule type or functional group are presented in the Organometallics, Hetarenes, Functional Groups, and Hydrocarbons tiles. Mouseover graphics with representative structures provide an instant visual overview of the content covered within each area of Science of Synthesis.

The news panel at the bottom of the page keeps the user up to date with what is going on at Science of Synthesis.
