

Publication Ethics and Publication Malpractice Statement

The ethics statements for Organic Materials are based on the Committee of Publication Ethics (COPE) Best Practice Guidelines for Journal Editors (<https://publicationethics.org/>).

Authorship and Authors' Responsibilities

Each author should have made the following contributions towards the completion of the manuscript: 1. Substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data 2. Drafting the article or revising it critically for important intellectual content 3. Final approval of the version to be published. With the submission of the manuscript the corresponding author declares that all named co-authors contributed to the work and have agreed to its publication.

Any conflict of interest must be declared at the time of submitting the manuscript. Economic or personal ties between authors and organizations can lead to a conflict of interest. The disclosure of such ties serves to objectify the process of the publication of articles. A conflict of interest exists if the author(s) have links to a company (e.g. consultancy work or acting in an advisory capacity, holding shares in the company, etc.) whose product is named in the article or to a company which sells a rival product. The topic must be presented without bias and descriptions given in the manuscript must be neutral and not favor or disparage any product.

With the submission of a manuscript the authors agree to the guidelines outlined in the journal's Instructions for Authors. With the acceptance of the manuscript the copyright remains with the author for open-access publications. The author declares that he/she agrees to the editorial revision of the manuscript (including all images, illustrations, etc.). The editors retain the right to make any necessary changes to the manuscript after consultation with the author(s).

If any case of misconduct will be detected, this will lead to an immediate retraction of the article or in minor cases to a correction in one of the following issues according to the publisher's guidelines.

If the work involves unusually hazardous chemicals, materials, procedures or equipment, the author must clearly identify these in the manuscript. If animal subjects have been used in the course of the author's work, the manuscript should contain a statement that all work was carried out in compliance with relevant laws and institutional guidelines.

Editors' Responsibilities

It is in the responsibility of the editors of the journal to decide, in accordance to the journal's and the editorial board's policies, which of the submitted articles should be published. The editors may consult each other and use the help of reviewers in making their decision.

Statement on Liability

The legislation on product liability makes increased demands on the duty of care to be exercised by authors of scientific research and publications. We therefore request the author to examine with particular care, also in his own interest, the factual correctness of the contents of his manuscript once it has been returned in the form of galley proofs. The responsibility for the correctness of data and statements made in the manuscript rests entirely with the author.

Copyright Statement

Submitted manuscripts must represent original research not previously published, nor being considered for publication elsewhere. The editors and the publisher combat plagiarism, double publication, and scientific misconduct. The manuscript may be subject to an investigation and retraction if plagiarism is suspected. If you plan to reproduce text, tables, or figures from a published source, you must first obtain written permission from the copyright holder (usually the publisher). For material never published before and given to you by another person, you must obtain permission from that person. Upon publication of an open-access article, all rights are held by the authors. Depending on the Creative Commons license under which the open-access article is published, the rights to reproduce all or part of any publication without prior consent from the authors is prohibited.
