
**Volume 4:
Compounds of Group 15 (As, Sb, Bi)
and Silicon Compounds**

	Preface	V
	Table of Contents	IX
	Introduction	
	Ian Fleming	1
4.1	Product Class 1: Arsenic Compounds	
	M. D. Smith	13
4.2	Product Class 2: Antimony Compounds	
	J. W. Burton	53
4.3	Product Class 3: Bismuth Compounds	
	H. Suzuki and T. Ikegami	77
4.4	Product Class 4: Silicon Compounds	
4.4.1	Product Subclass 1: Disilenes	
	K. M. Baines and M. S. Samuel	117
4.4.2	Product Subclass 2: Silenes	
	K. M. Baines and M. S. Samuel	125
4.4.3	Product Subclass 3: Silylenes	
	P. P. Gaspar and D. Zhou	135
4.4.4	Product Subclass 4: Silyl Hydrides	
	J. Pietruszka	159
4.4.5	Product Subclass 5: Disilanes	
	J. R. Hwu and K. S. Ethiraj	187
4.4.6	Product Subclass 6: Silyltin Reagents	
	I. Hemeon and R. D. Singer	205
4.4.7	Product Subclass 7: Silylboron Reagents	
	I. Hemeon and R. D. Singer	211
4.4.8	Product Subclass 8: Silylaluminum Reagents	
	I. Hemeon and R. D. Singer	219

4.4.9	Product Subclass 9: Silylzinc Reagents	
	I. Hemeon and R. D. Singer	225
4.4.10	Product Subclass 10: Silylcopper Reagents	
	R. D. Singer	231
4.4.11	Product Subclass 11: Silyllithium Reagents	
	R. D. Singer	237
4.4.12	Product Subclass 12: Haloorganosilanes	
	M. Nilsson†	247
4.4.13	Product Subclass 13: Silyl Diethers	
	T. Skrydstrup	269
4.4.14	Product Subclass 14: Silyl Esters	
	M. Jaspars	293
4.4.15	Product Subclass 15: Silyl Imidic Esters (Silylimino Ethers)	
	E. Lukevics and O. Pudova	305
4.4.16	Product Subclass 16: Silyl Enol Ethers	
	S. Kobayashi, K. Manabe, H. Ishitani, and J.-I. Matsuo	317
4.4.17	Product Subclass 17: Silyl Ethers	
	J. D. White and R. G. Carter	371
4.4.18	Product Subclass 18: Silyl Peroxides	
	K. Tamao, J.-I. Yoshida and K. Itami	413
4.4.19	Product Subclass 19: Silyl Sulfides and Selenides	
	A. Ricci and M. Comes-Franchini	427
4.4.20	Product Subclass 20: Silyl Azides	
	C. Moberg and H. Adolfsson	435
4.4.21	Product Subclass 21: Silylamines	
	K. Tamao and A. Kawachi	451
4.4.22	Product Subclass 22: Silyl Phosphines	
	J. Pietruszka	473
4.4.23	Product Subclass 23: Silylmethyl Anions	
	D. Wang and T. H. Chan	481
4.4.24	Product Subclass 24: Silyl Cyanides	
	M. North	499

4.4.25	Product Subclass 25: Acylsilanes P. C. B. Page and M. J. McKenzie	513
4.4.26	Product Subclass 26: 1-Diazo-1-silylalkanes T. Aoyama and T. Shioiri	569
4.4.27	Product Subclass 27: α-Haloalkylsilanes N. J. Lawrence	579
4.4.28	Product Subclass 28: α-Silyl Alcohols, Ethers, and Amines J. M. Aizpuru and C. Palomo	595
4.4.29	Product Subclass 29: α,β-Epoxy silanes G. H. Whitham	633
4.4.30	Product Subclass 30: Alkynyl[Ethynyl]silanes T. Hiyama and A. Mori	647
4.4.31	Product Subclass 31: Silylketenes J.-M. Pons and P. J. Kocienski	657
4.4.32	Product Subclass 32: Allenylsilanes J. Pornet	669
4.4.33	Product Subclass 33: Arylsilanes B. A. Keay	685
4.4.34	Product Subclass 34: Vinylsilanes K. Oshima	713
4.4.35	Product Subclass 35: α-Silyl Carbonyl Compounds Y. Landais	757
4.4.36	Product Subclass 36: β-Silyl Alkyl Halides W. E. Billups and R. K. Saini	773
4.4.37	Product Subclass 37: β-Silyl Alcohols and the Peterson Reaction D. J. Ager	789
4.4.38	Product Subclass 38: Propargylsilanes J. Pornet	811
4.4.39	Product Subclass 39: Benzylsilanes B. Bennetau	825
4.4.40	Product Subclass 40: Allylsilanes T. K. Sarkar	837

4.4.41	Product Subclass 41: β-Silyl Carbonyl Compounds	
	Ian Fleming	927
4.4.42	Product Subclass 42: γ-Silyl Alkyl Halides, Alcohols, and Esters Thereof	
	J. P. Michael and C. B. de Koning	947
	Keyword Index	973
	Author Index	1003
	Abbreviations	1055

Table of Contents

Introduction		
Ian Fleming		
	Introduction	1
4.1	Product Class 1: Arsenic Compounds	
	M. D. Smith	
4.1	Product Class 1: Arsenic Compounds	13
4.1.1	Product Subclass 1: Triorganoarsenic(III) and Related Compounds	13
	Synthesis of Product Subclass 1	13
4.1.1.1	Method 1: Alkylation of Metallic Arsenides	13
4.1.1.2	Method 2: Transmetalation from Other Organometallic Reagents	14
4.1.1.2.1	Variation 1: From Grignard Reagents and Arsenic(III) Halides	14
4.1.1.2.2	Variation 2: From Organolithium Reagents and Arsenic(III) Halides	15
4.1.1.3	Method 3: Direct Synthesis from Metallic Arsenic	16
4.1.1.4	Method 4: Reduction of Arsenic(V) Oxides	16
4.1.1.5	Method 5: Addition of Arsines to Multiple Bonds	17
4.1.1.6	Method 6: Cleavage of Tetraorganoarsenic Derivatives	18
	Applications of Product Subclass 1 in Organic Synthesis	18
4.1.1.7	Method 7: Triorganoarsenic(III) Derivatives as Halogen Equivalents	18
4.1.1.7.1	Variation 1: Nucleophilic Halovinylolation	19
4.1.1.7.2	Variation 2: Carbonyl Haloalkenylation	19
4.1.2	Product Subclass 2: Diorganoarsenic(III) and Related Compounds	19
	Synthesis of Product Subclass 2	20
4.1.2.1	Method 1: Transmetalation from Other Organometallic Reagents	20
4.1.2.1.1	Variation 1: From Grignard Reagents and Arsenic(III) Halides	20
4.1.2.1.2	Variation 2: From Organolithium Reagents and Arsenic(III) Halides	20
4.1.2.2	Method 2: Synthesis from Elemental Arsenic	21
4.1.2.3	Method 3: Thermolysis of Arsenic(V) Derivatives	21
4.1.2.4	Method 4: Redistribution Reactions	22
4.1.3	Product Subclass 3: Monoorganoarsenic(III) and Related Compounds	22
	Synthesis of Product Subclass 3	23
4.1.3.1	Method 1: Transmetalation from Other Organometallic Reagents	23
4.1.3.1.1	Variation 1: From Grignard Reagents and Arsenic(III) Derivatives	23
4.1.3.1.2	Variation 2: From Organolithium Reagents and Arsenic(III) Derivatives	23
4.1.3.2	Method 2: Reduction of Arsonic Acids	24
4.1.3.3	Method 3: Redistribution Reactions	24

4.1.4	Product Subclass 4: Pentaorganoarsenic(V) and Related Compounds	25
	Synthesis of Product Subclass 4	25
4.1.4.1	Method 1: Transmetalation from Other Organometallic Reagents	25
4.1.4.2	Method 2: Reaction Of Arsinimines with Organolithium Reagents	26
4.1.5	Product Subclass 5: Arsonium Ylides and Related Compounds	26
	Synthesis of Product Subclass 5	26
4.1.5.1	Method 1: From Arsonium Salts by the “Salt Method”	27
4.1.5.2	Method 2: From Reaction with Arsenic(V) Dihalides	27
4.1.5.3	Method 3: From Arsine Oxides	28
4.1.5.4	Method 4: From Diazonium Salts	28
4.1.5.5	Method 5: From Other Ylides by “Transylidation”	29
	Applications of Product Subclass 5 in Organic Synthesis	30
4.1.5.6	Method 6: Reactions of Stabilized Arsonium Ylides with Nonconjugated Carbonyl Compounds	30
4.1.5.6.1	Variation 1: Reactions of Stabilized Arsonium Ylides with α,β -Unsaturated Carbonyl Compounds	32
4.1.5.7	Method 7: Reactions of Semistabilized Arsonium Ylides with Carbonyl Compounds	32
4.1.5.8	Method 8: Reactions of Reactive Arsonium Ylides with Carbonyl Compounds	36
4.1.6	Product Subclass 6: Tetraorganoarsenic(V) and Related Compounds	37
	Synthesis of Product Subclass 6	37
4.1.6.1	Method 1: By Alkylation of Organoarsenic(III) Derivatives	37
4.1.6.2	Method 2: Reaction of Arsine Oxides with Grignard Reagents	38
4.1.7	Product Subclass 7: Triorganoarsenic(V) and Related Compounds	38
	Synthesis of Product Subclass 7	38
4.1.7.1	Method 1: Oxidation of Triorganoarsenic(III) Compounds	38
4.1.7.1.1	Variation 1: Reaction With Halogens	39
4.1.7.1.2	Variation 2: Reaction with “Halogen Substitute” Compounds	39
4.1.7.1.3	Variation 3: Reaction with Active Oxygen Compounds	40
	Applications of Product Subclass 7 in Organic Synthesis	41
4.1.7.2	Method 2: Triorganoarsenic(V) Derivatives as Halogen Equivalents	41
4.1.8	Product Subclass 8: Diorganoarsenic(V) and Related Compounds	41
	Synthesis of Product Subclass 8	42
4.1.8.1	Method 1: From Diazonium Salts: The Bart Reaction	42
4.1.8.2	Method 2: From Alkaline Alkyl Arsonate Salts: The Meyer Reaction	42
4.1.9	Product Subclass 9: Monoorganoarsenic(V) and Related Compounds	43
	Synthesis of Product Subclass 9	43
4.1.9.1	Method 1: The Bart Reaction	43
4.1.9.1.1	Variation 1: The Scheller Modification of the Bart Reaction	44

4.1.9.2	Method 2:	The Béchamp Reaction	45
4.1.9.3	Method 3:	The Meyer Reaction	45
4.1.9.3.1	Variation 1:	The Rosenmund Reaction	46
4.1.9.4	Method 4:	Oxidative Hydrolysis	46
4.2	Product Class 2: Antimony Compounds		
	J. W. Burton		
4.2	Product Class 2: Antimony Compounds		53
4.2.1	Product Subclass 1: Tertiary Stibines		53
	Synthesis of Product Subclass 1		53
4.2.1.1	Method 1:	From Alkali Metal Antimonides	53
4.2.1.1.1	Variation 1:	Cleavage of an Aryl–Antimony Bond	54
4.2.1.1.2	Variation 2:	Cleavage of an Alkyl–Antimony Bond	54
4.2.1.1.3	Variation 3:	Cleavage of a Halo–Antimony Bond	55
4.2.1.2	Method 2:	By Transmetalation	55
4.2.1.2.1	Variation 1:	Formation of Symmetrical Tertiary Stibines Using Grignard Reagents	55
4.2.1.2.2	Variation 2:	Formation of Nonsymmetrical Tertiary Stibines Using Organolithiums	56
	Applications of Product Subclass 1 in Organic Synthesis		57
4.2.1.3	Method 3:	Alkenation Reactions	57
4.2.1.3.1	Variation 1:	Wittig-type Alkenation of Aldehydes Mediated by Tributylstibine	57
4.2.1.3.2	Variation 2:	Alkenation of Aldehydes with Dibromomalonates	57
4.2.1.4	Method 4:	Palladium-Catalyzed Processes	58
4.2.2	Product Subclass 2: Di- and Monoorganostibines		58
	Synthesis of Product Subclass 2		58
4.2.2.1	Method 1:	By Cleavage of Distibines	59
4.2.2.2	Method 2:	By Redistribution Reactions	59
4.2.2.2.1	Variation 1:	Reaction of Antimony(III) Halides with Triarylstibines	59
4.2.2.2.2	Variation 2:	Reaction of Antimony(III) Halides with Halostibines	60
4.2.2.3	Method 3:	By Transmetalation	60
4.2.2.3.1	Variation 1:	From Tetraalkyllead	60
4.2.2.3.2	Variation 2:	From Organostannanes	61
4.2.2.4	Method 4:	From λ^5 -Stibanes	61
4.2.2.4.1	Variation 1:	Thermolysis of Dihalotriorgano- λ^5 -stibanes	61
4.2.2.4.2	Variation 2:	Thermolysis of Trihalodiorgano- λ^5 -stibanes	62
4.2.2.4.3	Variation 3:	Reduction of λ^5 -Stibanes	62
4.2.3	Product Subclass 3: Pentaorgano-λ^5-stibanes		62
	Synthesis of Product Subclass 3		62
4.2.3.1	Method 1:	Synthesis of Symmetrical Pentaorgano- λ^5 -stibanes	63
4.2.3.2	Method 2:	Synthesis of Unsymmetrical Pentaorgano- λ^5 -stibanes	63

	Applications of Product Subclass 3 in Organic Synthesis	63
4.2.3.3	Method 3: Reaction of λ^5 -Stibanes with Electrophiles	63
4.2.4	Product Subclass 4: Stibonium Ylides and Stibimines	64
	Synthesis of Product Subclass 4	64
4.2.4.1	Method 1: Use of Diazo Compounds	64
4.2.4.2	Method 2: From Sulfonyl Azides	65
	Applications of Product Subclass 4 in Organic Synthesis	65
4.2.4.3	Method 3: Wittig-type Reactions of Stibonium Ylides	65
4.2.5	Product Subclass 5: Tetraorgano-λ^5-stibanes	66
	Synthesis of Product Subclass 5	66
4.2.5.1	Method 1: By Cleavage of Pentaorgano- λ^5 -stibanes	66
4.2.5.2	Method 2: From Tertiary Stibines	66
4.2.5.2.1	Variation 1: By Alkylation of Trialkylstibines	66
4.2.5.2.2	Variation 2: By Arylation of Triarylstibines	67
	Applications of Product Subclass 5 in Organic Synthesis	67
4.2.5.3	Method 3: Allylation of Aldehydes by λ^5 -Stibanes	67
4.2.6	Product Subclass 6: Triorgano-λ^5-stibanes	68
	Synthesis of Product Subclass 6	68
4.2.6.1	Method 1: Oxidation of Tertiary Stibines with Bromine	68
	Applications of Product Subclass 6 in Organic Synthesis	68
4.2.6.2	Method 2: Formation of Diketones	68
4.2.7	Product Subclass 7: Di- and Monoorgano-λ^5-stibanes	69
	Synthesis of Product Subclass 7	69
4.2.7.1	Method 1: By Transmetalation	69
4.2.7.2	Method 2: From Tertiary Stibines	70
4.2.7.2.1	Variation 1: Cleavage of Triphenylstibine	70
4.2.7.2.2	Variation 2: Halogenation of Halodiorganostibines	70
4.2.7.3	Method 3: From Diazonium Salts	70
4.2.7.3.1	Variation 1: Preparation of Unsymmetrical Hydroxystibine Oxides	70
4.2.7.3.2	Variation 2: Preparation of Dihydroxystibine Oxides by the Scheller Reaction	71
4.3	Product Class 3: Bismuth Compounds H. Suzuki and T. Ikegami	
4.3	Product Class 3: Bismuth Compounds	77
	Synthesis of Product Class 3	77
4.3.1	Product Subclass 1: Alkyl- and Arylbismuthines	77
4.3.1.1	Method 1: From Grignard and Organolithium Reagents	78
4.3.1.2	Method 2: From Alkali Bismuthides	81

4.3.1.3	Method 3: By Transmetalation	81
4.3.1.4	Additional Methods	82
4.3.2	Product Subclass 2: Alkyl- and Arylhalobismuthines	83
4.3.2.1	Method 1: By Bi–C Bond Cleavage and Redistribution Reactions	84
4.3.2.2	Method 2: From Organometallic Reagents	86
4.3.3	Product Subclass 3: Alkyl- and Arylbismuthines Containing Bonds between Bismuth and Group 15 or 16 Elements	87
4.3.3.1	Method 1: From Halobismuthines	88
4.3.3.2	Method 2: From Alkoxybismuthines	89
4.3.3.3	Method 3: By Cleavage of Bi–C Bond(s) by Acidic Compounds	89
4.3.3.4	Additional Methods	90
4.3.4	Product Subclass 4: Dibismuthines and Dibismuthenes	91
4.3.4.1	Method 1: From Tertiary Bismuthines	93
4.3.4.2	Method 2: From Halodiorganobismuthines	93
4.3.5	Product Subclass 5: Organobismuth Compounds with Bismuth–Transition Metal Bonds	94
4.3.6	Product Subclass 6: Alkoxy- and Hydroxybismuthine Oxides	94
4.3.7	Product Subclass 7: Dihalotriorganobismuth(V) and Related Compounds	95
4.3.7.1	Method 1: Oxidative Addition of Halogen or Halogen Equivalent to Triorganobismuthines	96
4.3.7.2	Method 2: Oxidation of Bismuthines with Ozone, Peroxy Acids, and Other Oxygen Equivalents	97
4.3.7.3	Method 3: By Metathetical Reactions	97
4.3.8	Product Subclass 8: Oxybis[triarylhalobismuth(V)] and Related Compounds	98
4.3.9	Product Subclass 9: Bismuthine Imides	99
4.3.9.1	Method 1: From Tertiary Bismuthines	99
4.3.9.2	Method 2: From Triaryldihalobismuth(V)	100
4.3.10	Product Subclass 10: Bismuthine Oxides	100
4.3.11	Product Subclass 11: Bismuthonium Salts	102
4.3.11.1	Method 1: From Pentaarylbismuth(V) Compounds	103
4.3.11.2	Method 2: From Triaryldifluorobismuth(V)	104
4.3.11.3	Method 3: From Tertiary Bismuthines	105
4.3.12	Product Subclass 12: Bismuthonium Ylides	105
4.3.12.1	Method 1: From Tertiary Bismuthines	105
4.3.12.2	Method 2: From Triarylbismuth(V) Compounds	106
4.3.12.3	Method 3: From Bismuthonium Salts	107
4.3.13	Product Subclass 13: Pentaorganobismuth(V) Compounds	107
4.3.14	Product Subclass 14: Hexaorganobismuthates	108
	Applications of Product Class 3 in Organic Synthesis	108

4.4	Product Class 4: Silicon Compounds	
<hr/>		
4.4.1	Product Subclass 1: Disilenes	
	K. M. Baines and M. S. Samuel	
<hr/>		
4.4.1	Product Subclass 1: Disilenes	117
	Synthesis of Product Subclass 1	119
4.4.1.1	Method 1: Photolysis of Linear Trisilanes	119
4.4.1.2	Method 2: Photolysis of Cyclotrisilanes	120
4.4.1.3	Method 3: Reductive Coupling of Dihalosilanes	121
4.4.1.4	Method 4: Reduction of 1,2-Dihalodisilanes	122
4.4.1.5	Method 5: Photolysis of 2,3-Disilabicyclo[2.2.2]octa-5,7-dienes	123
4.4.1.6	Additional Methods	123
4.4.2	Product Subclass 2: Silenes	
	K. M. Baines and M. S. Samuel	
<hr/>		
4.4.2	Product Subclass 2: Silenes	125
	Synthesis of Product Subclass 2	127
4.4.2.1	Method 1: By Photolysis or Thermolysis of Acylsilanes	127
4.4.2.1.1	Variation 1: Photolysis of Acylsilanes	127
4.4.2.1.2	Variation 2: Thermolysis of Acylpolysilanes	128
4.4.2.2	Method 2: By 1,2-Salt Elimination from α -Lithiated Silanes	128
4.4.2.2.1	Variation 1: By Metalation of the C ^{α} -H Bond of Alkylsilanes	129
4.4.2.2.2	Variation 2: By Metalation of the C-Br Bond of α -Bromoalkylsilanes	130
4.4.2.2.3	Variation 3: From Halo(vinyl)silanes	130
4.4.2.3	Method 3: Sila-Peterson Reactions	131
4.4.2.3.1	Variation 1: From the Addition of Silyl Anions to Ketones	131
4.4.2.3.2	Variation 2: From the Addition of Organolithium Reagents to Acylpolysilanes	132
4.4.2.3.3	Variation 3: By the Deprotonation of α -Hydroxysilanes	132
4.4.2.4	Additional Methods	133
4.4.3	Product Subclass 3: Silylenes	
	P. P. Gaspar and D. Zhou	
<hr/>		
4.4.3	Product Subclass 3: Silylenes	135
	Synthesis of Product Subclass 3	137
4.4.3.1	Method 1: Reduction of Dihalosilanes	137
	Applications of Product Subclass 3 in Organic Synthesis	141
4.4.3.2	Method 2: Insertion Reactions	141

4.4.3.3	Method 3: Addition Reactions	147
4.4.3.3.1	Variation 1: To Dienes	147
4.4.3.3.2	Variation 2: To Aldehydes, Ketones, and Imines	148
4.4.3.3.3	Variation 3: To Alkynes and Nitriles	152
4.4.3.3.4	Variation 4: To Isocyanides and Azides	152
4.4.3.3.5	Variation 5: To Transition Metals	153
4.4.4	Product Subclass 4: Silyl Hydrides J. Pietruszka	
4.4.4	Product Subclass 4: Silyl Hydrides	159
	Synthesis of Product Subclass 4	160
4.4.4.1	Method 1: From Inorganic Silanes	160
4.4.4.2	Method 2: From Aryl- and Alkylsilyl Hydrides	163
4.4.4.3	Method 3: From Silyl Halides	168
4.4.4.4	Method 4: From Silyl Ethers	170
4.4.4.5	Methods 5: Additional Methods	171
	Applications of Product Subclass 4 in Organic Synthesis	172
4.4.4.6	Method 6: Hydrosilylation of Alkenes, Alkynes, and Related Compounds	172
4.4.4.7	Method 7: Silyl Hydrides as Reducing Reagents	176
4.4.5	Product Subclass 5: Disilanes J. R. Hwu and K. S. Ethiraj	
4.4.5	Product Subclass 5: Disilanes	187
	Synthesis of Product Subclass 5	188
4.4.5.1	Method 1: Via Coupling of Hydrosilanes	188
4.4.5.1.1	Variation 1: By Use of Transition Metal Catalysts	188
4.4.5.1.2	Variation 2: By Photolysis of Alkylhydrosilanes in the Presence of Mercury	189
4.4.5.2	Method 2: Via Photolysis of Organopolysilanes in the Presence of Hydrosilanes	190
4.4.5.3	Method 3: Via Coupling of (Organosilyl)alkali Metal Salts with Halosilanes	190
4.4.5.4	Method 4: Via Coupling of Halosilanes Using Metals or Metal Salts	191
4.4.5.4.1	Variation 1: By Use of Alkali Metals	192
4.4.5.4.2	Variation 2: By Use of Magnesium Metal	192
4.4.5.4.3	Variation 3: By Use of Lithium Naphthalenide	193
4.4.5.4.4	Variation 4: By Use of Samarium(II) Iodide	194
4.4.5.4.5	Variation 5: By Use of Potassium–Graphite Laminate (C ₈ K)	194
4.4.5.5	Method 5: Via Electrochemical Reduction of Halosilanes	195
4.4.5.6	Method 6: Via Photolysis of Organopolysilanes in the Presence of Trapping Agents	196
4.4.5.6.1	Variation 1: In the Presence of Ketones	196
4.4.5.6.2	Variation 2: In the Presence of Functionalized Alkenes	197

4.4.5.7	Method 7: From Halodisilanes and Organometallic Reagents	198
4.4.5.8	Additional Methods	198
	Applications of Product Subclass 5 in Organic Synthesis	199
4.4.6	Product Subclass 6: Silyltin Reagents I. Hemeon and R. D. Singer	
<hr/>		
4.4.6	Product Subclass 6: Silyltin Reagents	205
	Synthesis of Product Subclass 6	205
4.4.6.1	Method 1: Synthesis of Silyltin Reagents	205
	Applications of Product Subclass 6 in Organic Synthesis	207
4.4.7	Product Subclass 7: Silylboron Reagents I. Hemeon and R. D. Singer	
<hr/>		
4.4.7	Product Subclass 7: Silylboron Reagents	211
	Synthesis of Product Subclass 7	211
4.4.7.1	Method 1: Synthesis of Silylboron Reagents	211
4.4.7.1.1	Variation 1: Synthesis of (Dimethylphenylsilyl)(pinacol)borane from Dimethylphenylsilyllithium and Pinacolborane	213
4.4.7.1.2	Variation 2: Synthesis of (Dimethylphenylsilyl)(pinacol)borane from Dimethylphenylsilyllithium and Isopropoxy(pinacol)borane	214
4.4.7.1.3	Variation 3: Synthesis of Lithium Triethyl(dimethylphenylsilyl)borate	214
	Applications of Product Subclass 7 in Organic Synthesis	215
4.4.8	Product Subclass 8: Silylaluminum Reagents I. Hemeon and R. D. Singer	
<hr/>		
4.4.8	Product Subclass 8: Silylaluminum Reagents	219
	Synthesis of Product Subclass 8	219
4.4.8.1	Method 1: Tris(trimethylsilyl)aluminum from Bis(trimethylsilyl)mercury(II)	219
4.4.8.1.1	Variation 1: Tris(trimethylsilyl)aluminum from Chlorotrimethylsilane and Aluminum, Lithium, and Mercury Metals	220
4.4.8.2	Additional Methods	221
	Applications of Product Subclass 8 in Organic Synthesis	221

4.4.9	Product Subclass 9: Silylzinc Reagents I. Hemeon and R. D. Singer	
4.4.9	Product Subclass 9: Silylzinc Reagents	225
	Synthesis of Product Subclass 9	225
4.4.9.1	Method 1: From a Triorganosilyl Anion Source and Zinc(II) Reagents	225
4.4.9.1.1	Variation 1: Dialkyl(triorganosilyl)zincate Reagents from an Alkylmetal, Triorganosilylmetal Reagents, and Zinc(II) Salts	227
	Applications of Product Subclass 9 in Organic Synthesis	227
4.4.10	Product Subclass 10: Silylcopper Reagents R. D. Singer	
4.4.10	Product Subclass 10: Silylcopper Reagents	231
	Synthesis of Product Subclass 10	231
4.4.10.1	Method 1: Synthesis of Triorganosilylcopper(I) Reagents	231
4.4.10.2	Method 2: Synthesis of Mixed Alkyl(triorganosilyl)copper(I) Reagents	232
	Applications of Product Subclass 10 in Organic Synthesis	233
4.4.11	Product Subclass 11: Silyllithium Reagents R. D. Singer	
4.4.11	Product Subclass 11: Silyllithium Reagents	237
	Synthesis of Product Subclass 11	238
4.4.11.1	Method 1: By Lithiation of Halotriorganosilanes	238
4.4.11.1.1	Variation 1: Using Lithium Metal	238
4.4.11.1.2	Variation 2: Using an Alkyl lithium Reagent	239
4.4.11.2	Method 2: Via Si–Si Bond Cleavage	239
4.4.11.2.1	Variation 1: Reductive Cleavage Using Lithium Metal	240
4.4.11.2.2	Variation 2: Nucleophilic Cleavage Using an Alkyl lithium Reagent	240
4.4.11.3	Method 3: Via Si–Sn Bond Cleavage	241
4.4.11.4	Method 4: From Bis(triorganosilyl)mercury(II) Compounds	242
	Applications of Product Subclass 11 in Organic Synthesis	242
4.4.12	Product Subclass 12: Haloorganosilanes M. Nilsson†	
4.4.12	Product Subclass 12: Haloorganosilanes	247
	Synthesis of Product Subclass 12	249
4.4.12.1	Method 1: Conversion of Hydridoorganosilanes into Haloorganosilanes	249
4.4.12.1.1	Variation 1: By Reaction with Copper(II) Halides	249

4.4.12.1.2	Variation 2:	By Reaction with Hydrogen Halides, Haloalkanes, or Haloarenes	250
4.4.12.1.3	Variation 3:	By Reaction with Reactive Organic Halides in the Presence of Tertiary Amines	251
4.4.12.1.4	Variation 4:	By Reaction with Dihalogens	252
4.4.12.2	Method 2:	Halogenolysis of Disilanes	252
4.4.12.3	Method 3:	Halogenolysis of Si—C Bonds	252
4.4.12.4	Method 4:	Halogen Exchange	254
4.4.12.4.1	Variation 1:	Generation In Situ	255
4.4.12.5	Method 5:	Conversion of Disiloxanes into Haloorganosilanes	255
4.4.12.6	Method 6:	Direct Synthesis from Silicon and Organic Halides	256
4.4.12.7	Method 7:	Hydrosilylation of Unsaturated Bonds with Halohydrosilanes	257
4.4.12.8	Method 8:	Organometallic Exchange of Halogen in a Halosilane To Give a New Halosilane	258
		Applications of Product Subclass 12 in Organic Synthesis	260
4.4.12.9		Fluoroorganosilanes	260
4.4.12.10		Chloroorganosilanes	261
4.4.12.11		Bromoorganosilanes	262
4.4.12.12		Iodoorganosilanes	263
4.4.13	Product Subclass 13: Silyl Diethers		
	T. Skrydstrup		
4.4.13	Product Subclass 13: Silyl Diethers		269
	Synthesis of Product Subclass 13		269
4.4.13.1	Method 1:	Synthesis of Symmetrical Acyclic Silyl Diethers	269
4.4.13.1.1	Variation 1:	From Silanes	270
4.4.13.1.2	Variation 2:	From Dichlorosilanes	271
4.4.13.2	Method 2:	Synthesis of Unsymmetrical Acyclic Silyl Diethers	273
4.4.13.2.1	Variation 1:	From Alkoxy(halo)silanes	273
4.4.13.2.2	Variation 2:	From Chlorosilyl Pent-4-enyl Ethers	276
4.4.13.3	Method 3:	Synthesis of Cyclic Silyl Diethers	277
4.4.13.3.1	Variation 1:	From Silanes	277
4.4.13.3.2	Variation 2:	From Dichlorosilanes or Silyl Trifluoromethanesulfonates	278
4.4.13.3.3	Variation 3:	From Hexamethylcyclotrisilazane	280
		Applications of Product Subclass 13 in Organic Synthesis	281
4.4.13.4	Method 4:	Intramolecular Reactions Using Silicon-Tethered Reactants ..	281
4.4.13.5	Method 5:	Standard Protection of Alcohols	288

4.4.14	Product Subclass 14: Silyl Esters M. Jaspars	
4.4.14	Product Subclass 14: Silyl Esters	293
	Synthesis of Product Subclass 14	295
4.4.14.1	Silyl Sulfates and Trifluoromethanesulfonates	295
4.4.14.1.1	Method 1: Polymer-Supported Silyl Trifluoromethanesulfonates	295
4.4.14.1.2	Method 2: Reaction of Tetrasubstituted Silanes with Trifluoromethanesulfonic Acid	295
4.4.14.1.2.1	Variation 1: Using Trisubstituted Allylsilanes	296
4.4.14.1.3	Method 3: Reaction of Trialkylchlorosilanes with Trifluoromethanesulfonic Acid	296
4.4.14.1.4	Method 4: Reaction of Trialkylchlorosilanes with Sulfuric Acid	297
4.4.14.2	Silyl Phosphates	297
4.4.14.2.1	Method 1: Reaction of Bis(trimethylsilyl) Ether with Phosphorus Pentoxide	297
4.4.14.3	Silyl Carboxylates	298
4.4.14.3.1	Method 1: Reaction of Hydrosilanes with Carboxylic Acids	298
4.4.14.3.2	Method 2: Reaction of Trialkylchlorosilanes with Carboxylic Acids	299
4.4.14.3.2.1	Variation 1: With Sterically Hindered Trialkylchlorosilanes	300
4.4.14.3.3	Method 3: Reaction of Carboxylic Acids with Trialkylsilyl Trifluoromethanesulfonates	300
4.4.14.3.3.1	Variation 1: With Trialkylsilyl Trifluoromethanesulfonates Formed In Situ ·	301
4.4.14.3.4	Method 4: Reaction of Carboxylic Acids with <i>N,N'</i> -Bis(trimethylsilyl)urea	302
4.4.14.4	Additional Methods	302
4.4.15	Product Subclass 15: Silyl Imidic Esters (Silylimino Ethers) E. Lukevics and O. Pudova	
4.4.15	Product Subclass 15: Silyl Imidic Esters (Silylimino Ethers)	305
	Synthesis of Product Subclass 15	306
4.4.15.1	Method 1: Silylation of Amide Derivatives	306
4.4.15.1.1	Variation 1: With Chlorosilanes	306
4.4.15.1.2	Variation 2: With Silyl Triflates	307
4.4.15.1.3	Variation 3: With Trimethylsilyldimethylamine	308
4.4.15.1.4	Variation 4: With Hexamethyldisilazane	308
4.4.15.1.5	Variation 5: Silylamide-Based Silylation	309
4.4.15.2	Method 2: Catalytic Silylation with Trimethyl(pentafluorophenyl)silane ·	310
4.4.15.3	Method 3: Coupling of Alkali Metal Hexamethyldisilazanides with Acid Derivatives	311
4.4.15.3.1	Variation 1: With Acyl Chlorides	311
4.4.15.3.2	Variation 2: With Esters	312

4.4.15.4	Method 4:	Acylation of Trimethylsilylhydroxylamines and Bis(trimethylsilyl)carbodiimide	312
4.4.15.4.1	Variation 1:	With Acyl Chlorides	312
4.4.15.4.2	Variation 2:	With Ketenes	313
4.4.15.5	Method 5:	Insertion of Formaldehyde into the Si–N Bond of O,N-Bis(silyl)amides	314
4.4.15.6	Additional Methods	314
4.4.16	Product Subclass 16: Silyl Enol Ethers		
	S. Kobayashi, K. Manabe, H. Ishitani, and J.-I. Matsuo		
4.4.16	Product Subclass 16: Silyl Enol Ethers		317
	Synthesis of Product Subclass 16		330
4.4.16.1	Method 1:	From Carbonyl Compounds, Bases, and Electrophilic Silylating Agents	330
4.4.16.1.1	Variation 1:	Synthesis of Silyl Enol Ethers of Aldehydes and Ketones	331
4.4.16.1.2	Variation 2:	Synthesis of Silyl Ketene Acetals and Related Compounds	336
4.4.16.1.3	Variation 3:	Synthesis of Siloxybutadienes	341
4.4.16.1.4	Variation 4:	Chemoselective Synthesis of Silyl Enol Ethers	343
4.4.16.1.5	Variation 5:	Enantioselective Synthesis of Silyl Enol Ethers	344
4.4.16.1.6	Variation 6:	Synthesis of Polymer-Supported Silyl Enol Ethers	345
4.4.16.2	Method 2:	From α,β -Unsaturated Carbonyl Compounds by Reductive Silylation	346
4.4.16.2.1	Variation 1:	By Metal Reduction and Subsequent Enolate Trapping	346
4.4.16.2.2	Variation 2:	By Conjugate Addition of Nucleophiles and Subsequent Enolate Trapping	347
4.4.16.2.3	Variation 3:	By Hydrosilylation	349
4.4.16.3	Method 3:	From Diesters in the Acyloin Condensation	350
4.4.16.4	Method 4:	From α -Halo Carbonyl Compounds by Reductive Silylation ..	350
4.4.16.5	Method 5:	From Alkenes by Hydrosilylation in the Presence of Carbon Monoxide	351
4.4.16.6	Method 6:	From Acylsilanes by Nucleophilic Addition and Brook Rearrangement	352
4.4.16.6.1	Variation 1:	With Alkenyl- or Alkynylmetals	352
4.4.16.6.2	Variation 2:	With Nucleophilic Reagents Having an α -Leaving Group	353
4.4.16.7	Method 7:	From Silyl Esters by Alkylidenation	354
4.4.16.8	Method 8:	Rearrangements of Silyl Ethers	355
4.4.16.8.1	Variation 1:	Via Rearrangement of β -Siloxy Carbenoids	355
4.4.16.8.2	Variation 2:	Via Isomerization of Allyl and Propargyl Silyl Ethers	355
4.4.16.8.3	Variation 3:	Via Rearrangement of Silyl Cyclopropyl Ethers	356
4.4.16.9	Method 9:	By Oxidation of Vinylolithiums	357
4.4.16.10	Method 10:	From Ketenes by Haloalkylsilane Trapping of Lithium Enolates	357
4.4.16.11	Method 11:	Interconversion of Silyl Enol Ethers	358
4.4.16.11.1	Variation 1:	Introduction of Nitrogen-Based Functional Groups at the α -Position	358

4.4.16.11.2	Variation 2:	Introduction of Nitrogen-Based Functional Groups at the β -Position	358
4.4.16.11.3	Variation 3:	Ene-like Reactions of Silyl Enol Ethers with Aldehydes	359
4.4.16.11.4	Variation 4:	Alkylation and Arylation of 2-Siloxyallyl Halides	360
4.4.16.11.5	Variation 5:	Isomerization of Silyl Enol Ethers	360
4.4.16.11.6	Variation 6:	Conversion of Trimethylsilyl Enol Ethers into Trichlorosilyl Enol Ethers	361
4.4.16.12		Additional Methods	361
4.4.17	Product Subclass 17: Silyl Ethers		
	J. D. White and R. G. Carter		
4.4.17		Product Subclass 17: Silyl Ethers	371
4.4.17.1		Trimethylsilyl Ethers	372
		Formation	372
4.4.17.1.1	Method 1:	Silylation of Alcohols with Chlorotrimethylsilane	372
4.4.17.1.2	Method 2:	Silylation of Alcohols with Trimethylsilyl Trifluoromethanesulfonate	373
4.4.17.1.3	Method 3:	Silylation of Alcohols with Trimethylsilyl Cyanide	373
4.4.17.1.4	Method 4:	Silylation of Alcohols with <i>N,O</i> -Bis(trimethylsilyl)acetamide	374
		Cleavage	375
4.4.17.1.5	Method 5:	Cleavage of Trimethylsilyl Ethers with Acidic Reagents	375
4.4.17.1.6	Method 6:	Cleavage of Trimethylsilyl Ethers under Basic Conditions	376
4.4.17.2		Triethylsilyl Ethers	377
		Formation	377
4.4.17.2.1	Method 1:	Silylation of Alcohols with Chlorotriethylsilane	377
4.4.17.2.1.1	Variation 1:	With Chlorotriethylsilane in Pyridine	378
4.4.17.2.1.2	Variation 2:	With Chlorotriethylsilane in the Presence of 4-(Dimethylamino)pyridine	379
4.4.17.2.2	Method 2:	Silylation of Alcohols with Triethylsilyl Trifluoromethanesulfonate	380
		Cleavage	380
4.4.17.2.3	Method 3:	Cleavage of Triethylsilyl Ethers under Acidic Conditions	380
4.4.17.2.3.1	Variation 1:	In the Presence of 4-Toluenesulfonic Acid	381
4.4.17.2.3.2	Variation 2:	With Trifluoromethanesulfonic Acid	382
4.4.17.2.4	Method 4:	Cleavage of Triethylsilyl Ethers with Tetrabutylammonium Fluoride	382
4.4.17.3		<i>tert</i> -Butyldimethylsilyl Ethers	383
		Formation	383
4.4.17.3.1	Method 1:	Silylation of Alcohols with <i>tert</i> -Butyldimethylsilyl Chloride	383
4.4.17.3.1.1	Variation 1:	In the Presence of 4-(Dimethylamino)pyridine	384
4.4.17.3.1.2	Variation 2:	In Dichloromethane	384

4.4.17.3.2	Method 2:	Silylation of Alcohols with <i>tert</i> -Butyldimethylsilyl Trifluoromethanesulfonate	385
4.4.17.3.2.1	Variation 1:	Selective Silylation of Phenols	386
4.4.17.3.2.2	Variation 2:	Selective Silylation of Alcohols	386
4.4.17.3.3	Method 3:	Migration of a <i>tert</i> -Butyldimethylsilyl Group from a <i>tert</i> -Butyldimethylsilyl Ether to an Alcohol	387
	Cleavage		388
4.4.17.3.4	Method 4:	Cleavage of <i>tert</i> -Butyldimethylsilyl Ethers with Tetrabutylammonium Fluoride	388
4.4.17.3.5	Method 5:	Cleavage of <i>tert</i> -Butyldimethylsilyl Ethers with Tris(dimethylamino)sulfur (Trimethylsilyl)difluoride	390
4.4.17.3.6	Method 6:	Cleavage of <i>tert</i> -Butyldimethylsilyl Ethers under Acidic Conditions	391
4.4.17.3.6.1	Variation 1:	With Hydrogen Fluoride–Pyridine Complex	391
4.4.17.3.6.2	Variation 2:	With Mineral Acid	392
4.4.17.3.6.3	Variation 3:	With Organic Acids	393
4.4.17.3.6.4	Variation 4:	With Lewis Acids	395
4.4.17.4	Triisopropylsilyl Ethers		396
	Formation		396
4.4.17.4.1	Method 1:	Silylation of Alcohols with Triisopropylsilyl Trifluoromethanesulfonate and 2,6-Lutidine	396
4.4.17.4.1.1	Variation 1:	With Triisopropylsilyl Trifluoromethanesulfonate in the Presence of 4-(Dimethylamino)pyridine	397
	Cleavage		397
4.4.17.4.2	Method 2:	Cleavage of Triisopropylsilyl Ethers with Tetrabutylammonium Fluoride	397
4.4.17.4.3	Method 3:	Cleavage of Triisopropylsilyl Ethers with Tris(dimethylamino)sulfur (Trimethylsilyl)difluoride	398
4.4.17.4.4	Method 4:	Cleavage of Triisopropylsilyl Ethers with Hydrogen Fluoride–Pyridine Complex	399
4.4.17.4.5	Method 5:	Cleavage of Triisopropylsilyl Ethers under Acidic Conditions	400
4.4.17.5	<i>tert</i> -Butyldiphenylsilyl Ethers		401
	Formation		401
4.4.17.5.1	Method 1:	Silylation of Alcohols with <i>tert</i> -Butyldiphenylsilyl Chloride	401
4.4.17.5.1.1	Variation 1:	In the Presence of 4-(Dimethylamino)pyridine	402
4.4.17.5.1.2	Variation 2:	Using Butyllithium	402
4.4.17.5.2	Method 2:	Silylation of Alcohols with <i>tert</i> -Butyldiphenylsilyl Trifluoromethanesulfonate	403
4.4.17.5.3	Method 3:	Migration of a <i>tert</i> -Butyldiphenylsilyl Group to an Alcohol	403
	Cleavage		404
4.4.17.5.4	Method 4:	Cleavage of <i>tert</i> -Butyldiphenylsilyl Ethers with Tetrabutylammonium Fluoride	404

4.4.17.5.5	Method 5:	Cleavage of <i>tert</i> -Butyldiphenylsilyl Ethers with Tetrabutylammonium Fluoride in Acetic Acid	406
4.4.17.5.6	Method 6:	Cleavage of <i>tert</i> -Butyldiphenylsilyl Ethers with Tris(dimethylamino)sulfur (Trimethylsilyl)difluoride	406
4.4.17.5.7	Method 7:	Cleavage of <i>tert</i> -Butyldiphenylsilyl Ethers with Hydrogen Fluoride–Pyridine Complex	407
4.4.17.5.7.1	Variation 1:	Cleavage with Hydrogen Fluoride–Triethylamine Complex	408
4.4.17.6		Other Silyl Ethers	409
4.4.18	Product Subclass 18: Silyl Peroxides		
	K. Tamao, J.-I. Yoshida and K. Itami		
4.4.18	Product Subclass 18: Silyl Peroxides		413
	Synthesis of Product Subclass 18		413
4.4.18.1	Method 1:	Synthesis of Silyl Peroxides	413
	Applications of Product Subclass 18 in Organic Synthesis		414
4.4.18.2	Method 2:	Various Oxidations Using Silyl Peroxides	414
4.4.18.3	Method 3:	Synthesis of Alcohols via Silyl Peroxides	416
4.4.18.3.1	Variation 1:	Oxidation of Heteroatom-Substituted Organosilicon Compounds	416
4.4.18.3.2	Variation 2:	Oxidation of Phenyl-Substituted Organosilicon Compounds	418
4.4.18.3.3	Variation 3:	Oxidation of Heteroaromatic-Substituted Organosilicon Compounds	421
4.4.18.3.4	Variation 4:	Oxidation of Allyl-Substituted Organosilicon Compounds	422
4.4.18.3.5	Variation 5:	Oxidation of Alkyl-Substituted Organosilicon Compounds	422
4.4.19	Product Subclass 19: Silyl Sulfides and Selenides		
	A. Ricci and M. Comes-Franchini		
4.4.19	Product Subclass 19: Silyl Sulfides and Selenides		427
	Synthesis of Product Subclass 19		429
4.4.19.1	Method 1:	From Hydrogen Sulfide and Aminosilanes	429
4.4.19.2	Method 2:	From Thiolates and Halosilanes	430
4.4.19.2.1	Variation 1:	From Enethiolates and Halosilanes	431
4.4.19.3	Method 3:	From In Situ Generated Selenolates and Halosilanes	432
4.4.19.3.1	Variation 1:	From Lithium, Powdered Selenium, and Chlorotrimethylsilane	432

4.4.20	Product Subclass 20: Silyl Azides C. Moberg and H. Adolfsson	
<hr/>		
4.4.20	Product Subclass 20: Silyl Azides	435
	Synthesis of Product Subclass 20	435
4.4.20.1	Method 1: Synthesis of Silyl Azides by Substitution	435
4.4.20.1.1	Variation 1: From Silyl Halides	435
4.4.20.1.2	Variation 2: From <i>N</i> -Butyltrialkylsilylanamines	436
4.4.20.2	Method 2: Synthesis of Silyl Azides by Trans-silylations	436
	Applications of Product Subclass 20 in Organic Synthesis	437
4.4.20.3	Method 3: Synthesis of Heterocyclic Compounds Using Silyl Azides	437
4.4.20.3.1	Variation 1: Triazoles	437
4.4.20.3.2	Variation 2: Tetrazoles	438
4.4.20.3.3	Variation 3: Other Heterocycles	438
4.4.20.4	Method 4: Synthesis of Acyl Azides Using Silyl Azides	439
4.4.20.4.1	Variation 1: From Carboxylic Acid Derivatives	439
4.4.20.4.2	Variation 2: From Aldehydes	439
4.4.20.5	Method 5: Synthesis of α -Azido Alcohols Using Silyl Azides	440
4.4.20.6	Method 6: Synthesis of β -Azido Alcohols Using Silyl Azides	440
4.4.20.6.1	Variation 1: From Epoxides	440
4.4.20.6.2	Variation 2: From 1,2-Diols	443
4.4.20.7	Method 7: Synthesis of β -Azido Amines Using Silyl Azides	443
4.4.20.8	Method 8: Synthesis of Alkyl Azides Using Silyl Azides	444
4.4.20.8.1	Variation 1: Alkyl Azides	444
4.4.20.8.2	Variation 2: β -Azido Ketones	445
4.4.20.8.3	Variation 3: Aryl Azides	445
4.4.20.8.4	Variation 4: Miscellaneous	445
4.4.20.9	Method 9: Applications of Silyl Azides in Rearrangement and in Oxidation Reactions	446
4.4.21	Product Subclass 21: Silylamines K. Tamao and A. Kawachi	
<hr/>		
4.4.21	Product Subclass 21: Silylamines	451
	Synthesis of Product Subclass 21	451
4.4.21.1	Method 1: Reaction of Chlorosilanes with Amines	451
4.4.21.1.1	Variation 1: Preparation of Diethylamino- and Diisopropylamino-Substituted Silane Derivatives	452
4.4.21.1.2	Variation 2: Preparation and <i>ortho</i> -Lithiation of <i>N,N'</i> -Bis[2-(dimethylamino)ethyl]- <i>N,N'</i> -dimethyldiphenylsilylanediamine	453
4.4.21.1.3	Variation 3: Reaction of Chloro[2-[chloro(dimethyl)silyl]ethyl]- dimethylsilane with Primary Amines	454
4.4.21.1.4	Variation 4: Reaction of Bis(dimethylsilyl)benzene with Primary Amines ..	455

4.4.21.2	Method 2:	Reaction of Silyl Trichloroacetates with Amines	455
4.4.21.3	Method 3:	Reaction of Tris(2-aminoethyl)amines with Tris- and Tetrakis(dimethylamino)silanes	456
4.4.21.4	Method 4:	Reaction of Silyllithiums with Amines	457
4.4.21.5	Method 5:	Reaction of Hexamethyldisilazane	457
4.4.21.5.1	Variation 1:	Preparation and Reaction of <i>N,O</i> -Bis(trimethylsilyl)hydroxylamine	457
4.4.21.5.2	Variation 2:	Preparation of <i>N,O</i> -Bis(trimethylsilyl) Sulfamate	458
4.4.21.5.3	Variation 3:	Monosilylation of Anilines	459
4.4.21.5.4	Variation 4:	Preparation and Reaction of Lithium <i>N,N</i> -Bis(trimethylsilyl)(aminomethyl)acetylide	459
4.4.21.5.5	Variation 5:	Preparation of <i>N</i> -Silylaldimines	461
4.4.21.5.6	Variation 6:	Preparation of <i>N,N,N'</i> -Tris(trimethylsilyl)amidines	461
4.4.21.6	Method 6:	Preparation of 1-Aza-2-silacyclobutanes	462
4.4.21.6.1	Variation 1:	Aza-Brook Rearrangement of (α -Silylallyl)amines to <i>N</i> -Silylenamines	462
4.4.21.7	Method 7:	Preparation and Reaction of Aminosilyl Anions	463
4.4.21.8	Method 8:	Reaction of 1-(Trimethylsilyl)-1 <i>H</i> -1,2,3-benzotriazole	464
4.4.21.8.1	Variation 1:	Reaction of 2-Aza-1,3-dienes with Trimethylsilyl Trifluoromethanesulfonate	465
4.4.21.8.2	Variation 2:	Reductive Silylation of Azaaromatic Compounds	465
4.4.21.8.3	Variation 3:	Synthesis of <i>N,N'</i> -Disilylated Enediamines	466
4.4.21.8.4	Variation 4:	Preparation of Diazasilacycloalkenes	466
4.4.21.8.5	Variation 5:	Reductive Silylation of Nitriles	467
4.4.21.9	Method 9:	Hydrosilylation of Imines	467
4.4.21.9.1	Variation 1:	Hydrosilylation of Carbodiimides	468
4.4.21.9.2	Variation 2:	Hydrosilylation of Nitriles	468
4.4.21.10	Method 10:	Preparation of Stable Silanimines	469
4.4.21.11	Method 11:	Preparation of a Lithium Silaamidide	470
4.4.21.12	Method 12:	Preparation and Reaction of Stable Cyclic Bis(amino)silylenes	470
4.4.22	Product Subclass 22: Silyl Phosphines J. Pietruszka		
4.4.22	Product Subclass 22: Silyl Phosphines		473
	Synthesis of Product Subclass 22		474
4.4.22.1	Method 1:	From Silyl Hydrides	474
4.4.22.2	Method 2:	From Silyl Halides	475
4.4.22.3	Method 3:	From Other Silyl Phosphines	477
4.4.22.4	Additional Methods		478

4.4.23	Product Subclass 23: Silylmethyl Anions D. Wang and T. H. Chan	
4.4.23	Product Subclass 23: Silylmethyl Anions	481
4.4.23.1	Method 1: Metalation of Alkylsilanes and Their Derivatives	485
4.4.23.1.1	Variation 1: With Alkylolithiums	486
4.4.23.1.2	Variation 2: With Schlosser's Base	487
4.4.23.1.3	Variation 3: With Lithium Diisopropylamide and Similar Amide Bases	487
4.4.23.1.4	Variation 4: With Other Bases	488
4.4.23.2	Method 2: Metal-Halogen Exchange of α -Haloalkylsilanes	488
4.4.23.2.1	Variation 1: With Magnesium	489
4.4.23.2.2	Variation 2: With Lithium	490
4.4.23.3	Method 3: Transmetalation Reactions of α -Silylalkylmetals	491
4.4.23.3.1	Variation 1: Of α -Silylalkyllithium Compounds	491
4.4.23.3.2	Variation 2: Of α -Silylalkylmagnesium	492
4.4.23.3.3	Variation 3: Of α -Silylalkylstannane	492
4.4.23.4	Method 4: Reductive Lithiation of α -Sulfanyl- and α -Selenylalkylsilanes .	493
4.4.23.5	Method 5: Addition of Organometallic Reagents to Vinylsilanes and Their Analogues	494
4.4.23.5.1	Variation 1: Of Organolithium Reagents to Vinylsilanes	494
4.4.23.5.2	Variation 2: Of Organomagnesium Reagents to Vinylsilanes	495
4.4.23.6	Additional Methods	495
4.4.24	Product Subclass 24: Silyl Cyanides M. North	
4.4.24	Product Subclass 24: Silyl Cyanides	499
4.4.24.1	Tetracoordinate Silyl Cyanides	499
4.4.24.1.1	Method 1: From Silyl Chlorides	500
4.4.24.1.1.1	Variation 1: Using Silver(I) or Mercury(II) Cyanide	501
4.4.24.1.1.2	Variation 2: Using Lithium Cyanide	501
4.4.24.1.1.3	Variation 3: Using Sodium or Potassium Cyanide	502
4.4.24.1.1.4	Variation 4: Using Tetraethylammonium Cyanide	502
4.4.24.1.1.5	Variation 5: Using Hydrogen Cyanide and Triethylamine	503
4.4.24.1.1.6	Variation 6: By Transcyanation	503
4.4.24.1.1.7	Variation 7: Using Acetonitrile	503
4.4.24.1.2	Method 2: From Other Silyl Halides	504
4.4.24.1.3	Method 3: By Cleavage of a Si-O Bond	505
4.4.24.1.4	Method 4: By Cleavage of a Si-S Bond	506
4.4.24.1.5	Method 5: By Cleavage of a Si-N Bond	507
4.4.24.1.6	Method 6: By Cleavage of a Si-C Bond	507
4.4.24.1.7	Method 7: By Cleavage of a Si-Si Bond	507
4.4.24.1.8	Method 8: By Cleavage of a Si-H Bond	508
4.4.24.1.9	Method 9: By Cleavage of a Si-Hg Bond	509
4.4.24.2	Pentacoordinate Silyl Cyanides	509

4.4.25	Product Subclass 25: Acylsilanes P. C. B. Page and M. J. McKenzie	
4.4.25	Product Subclass 25: Acylsilanes	513
	Synthesis of Product Subclass 25	514
4.4.25.1	Simple Acylsilanes	514
4.4.25.1.1	Method 1: Hydroboration–Oxidation of Alkynylsilanes	515
4.4.25.1.2	Method 2: Hydrolysis of Acetals	515
4.4.25.1.3	Method 3: From Silylmetal Intermediates	518
4.4.25.1.4	Method 4: Preparation from Enol Ethers	521
4.4.25.1.5	Method 5: Palladium-Catalyzed Coupling	524
4.4.25.1.6	Method 6: Oxidation of α -Hydroxysilanes	524
4.4.25.1.7	Method 7: Silylation of Acylmetal Species	525
4.4.25.1.8	Method 8: Other Oxidative Methods	527
4.4.25.1.9	Additional Methods	528
4.4.25.2	α -Haloacylsilanes	529
4.4.25.2.1	Method 1: Halogenation of Trialk-1-enyl Borates	529
4.4.25.2.2	Method 2: Halogenation of the Enol Ethers of Acylsilanes	530
4.4.25.2.3	Method 3: Bromination–Rearrangement of Epoxysilanes	530
4.4.25.2.4	Additional Methods	531
4.4.25.3	α -Oxoacylsilanes	531
4.4.25.3.1	Method 1: Oxidation of Diols	531
4.4.25.3.2	Method 2: From Allenyl Ethers	532
4.4.25.3.3	Method 3: From Silyldiazoesters	532
4.4.25.4	α,β -Unsaturated Acylsilanes	532
4.4.25.4.1	Method 1: From Allenyl Ethers	533
4.4.25.4.2	Method 2: Other Enol Ether Methods	535
4.4.25.4.3	Method 3: Hydroboration–Oxidation of Enynylsilanes and (Arylalkynyl)silanes	537
4.4.25.4.4	Method 4: From Alk-2-ynoysilanes	538
4.4.25.4.5	Method 5: Oxidation of α -Hydroxysilanes	538
4.4.25.4.6	Additional Methods	539
4.4.25.5	α -Cyclopropylacylsilanes	540
4.4.25.5.1	Method 1: From Silylmetal Species	541
4.4.25.5.2	Method 2: From α -Haloacylsilanes	541
4.4.25.5.3	Additional Methods	542
4.4.25.6	α -Epoxyacylsilanes	543
4.4.25.6.1	Method 1: Epoxidation of α,β -Unsaturated Acylsilanes	543
	Applications of Product Subclass 25 in Organic Synthesis	543
4.4.25.7	Simple Acylsilanes	543
4.4.25.7.1	Method 1: Nucleophilic Addition	543
4.4.25.7.2	Method 2: Acylsilanes as Acyl Anion Precursors	550

4.4.25.7.3	Method 3:	Enolate and Enol Ether Reactions	551
4.4.25.7.4	Method 4:	Photochemistry	552
4.4.25.7.5	Method 5:	Biotransformations	554
4.4.25.7.6	Method 6:	Miscellaneous	555
4.4.25.8		α -Haloacylsilanes	555
4.4.25.9		α -Oxoacylsilanes	557
4.4.25.10		α,β -Unsaturated Acylsilanes	558
4.4.26	Product Subclass 26: 1-Diazo-1-silylalkanes		
	T. Aoyama and T. Shioiri		
4.4.26	Product Subclass 26: 1-Diazo-1-silylalkanes		569
	Synthesis of Product Subclass 26		571
4.4.26.1	Method 1:	From Trialkyl(chloromethyl)silanes by Diazo Transfer Reactions	571
4.4.26.2	Method 2:	From Acylsilanes	573
4.4.26.3	Method 3:	Silylation of α -Diazoacetates, α -Diazophosphonates, and α -Diazo Ketones	573
4.4.26.4	Method 4:	Alkylation of Diazo(trimethylsilyl)methane	574
4.4.26.5	Method 5:	Acylation of Diazo(pentamethyldisilyl)methane	574
4.4.26.6	Method 6:	Silylation of Diazo(trimethylsilyl)methane	575
4.4.27	Product Subclass 27: α-Haloalkylsilanes		
	N. J. Lawrence		
4.4.27	Product Subclass 27: α-Haloalkylsilanes		579
	Synthesis of Product Subclass 27		580
4.4.27.1	Method 1:	Direct Halogenation of Alkylsilanes	580
4.4.27.1.1	Variation 1:	Chlorination of Alkylsilanes	581
4.4.27.1.2	Variation 2:	Bromination of Alkylsilanes	581
4.4.27.2	Method 2:	Substitution of α -Hydroxyalkylsilanes	582
4.4.27.2.1	Variation 1:	Substitution with Chloride Using Thionyl Chloride	583
4.4.27.2.2	Variation 2:	Chlorination of α -Hydroxyalkylsilanes with Triphenylphosphine and Carbon Tetrachloride	584
4.4.27.2.3	Variation 3:	Iodination of α -Hydroxyalkylsilanes with Methyl(triphenoxy)phosphonium Iodide	584
4.4.27.3	Method 3:	Haloalkylation of Halosilanes	585
4.4.27.4	Method 4:	Reaction of Halosilanes with Diazomethane	586
4.4.27.5	Method 5:	Nucleophilic Substitution of Halo(haloalkyl)silanes	587
4.4.27.6	Method 6:	Alkylation of α -Haloalkylsilanes	588
	Applications of Product Subclass 27 in Organic Synthesis		588

4.4.28	Product Subclass 28: α-Silyl Alcohols, Ethers, and Amines J. M. Aizpurua and C. Palomo	
4.4.28	Product Subclass 28: α-Silyl Alcohols, Ethers, and Amines	595
	Synthesis of Product Subclass 28	597
4.4.28.1	Method 1: From Silyl Hydrides and Fischer Alkoxycarbene Complexes ..	597
4.4.28.2	Method 2: From Silyl Hydrides and <i>N</i> -Vinylamides or <i>N</i> -Vinylureas	597
4.4.28.3	Method 3: From Silyl Halides and Ethers or Amines	598
4.4.28.3.1	Variation 1: Deprotonative α -Silylation of Aliphatic Ethers with Lithium-free Butylpotassium and Chlorosilanes	598
4.4.28.3.2	Variation 2: Deprotonative α -Silylation of Alkyl Arylmethyl Ethers with <i>tert</i> -Butyllithium/ <i>N,N,N',N'</i> -Tetramethylethylenediamine and Chlorosilanes	599
4.4.28.3.3	Variation 3: Deprotonative α -Silylation of Cyclic Secondary <i>N-tert</i> -Butoxycarbonyl Amines with <i>sec</i> -Butyllithium/ <i>N,N,N',N'</i> -Tetramethylethylenediamine or <i>sec</i> -Butyllithium/(–)-Sparteine and Chlorosilanes	600
4.4.28.3.4	Variation 4: Dehalogenative Silylation of Chloromethyl Ethers with Lithium and Chlorosilanes	601
4.4.28.3.5	Variation 5: Desulfurative Silylation of α -Phenylsulfanyl Ethers with Lithium 1-(Dimethylamino)naphthalenide and Chlorosilanes	601
4.4.28.4	Method 4: From Silyl Halides and Aldehydes or Ketones by Reductive Silylation with Magnesium	602
4.4.28.5	Method 5: From Silyl Halides and Esters by Reductive Silylation with Magnesium or Sodium	603
4.4.28.5.1	Variation 1: Reductive Silylation of <i>tert</i> -Butyl or Trimethylsilyl Benzoates with the Chlorotrimethylsilane/Magnesium/Hexamethyl- phosphoric Triamide System	604
4.4.28.5.2	Variation 2: Reductive Silylation of Trimethylsilyl Alkanoates with the Chlorotrimethylsilane/Sodium/Tetrahydrofuran System ..	604
4.4.28.6	Method 6: From Silyl Halides and Cyanides or <i>O</i> -Trimethylsilyl Cyanohydrins by Reductive Silylation with Lithium	605
4.4.28.7	Method 7: From <i>O</i> -Silyl Ethers	606
4.4.28.7.1	Variation 1: Retro-[1,2]-Brook Rearrangement of Allyl and Benzyl <i>O</i> -Silyl Ethers	606
4.4.28.7.2	Variation 2: Retro-[1,2]-Brook Rearrangement of α -Stannyl Silyl Ethers ..	607
4.4.28.8	Method 8: From Silyl Anions and Aldehydes or Ketones	608
4.4.28.8.1	Variation 1: With Trimethylsilyllithium	609
4.4.28.8.2	Variation 2: With Tris(trimethylsilyl)aluminum–Diethyl Ether Complex ..	610
4.4.28.8.3	Variation 3: With Disilanes by Fluoride-Induced Catalysis	610
4.4.28.8.4	Variation 4: With Dimethylphenylsilyllithium	611
4.4.28.9	Method 9: From Silyl Anions and Esters	612
4.4.28.10	Method 10: From (α -Haloalkyl)silanes and Nitrogen or Oxygen Nucleophiles	613
4.4.28.10.1	Variation 1: <i>N</i> -Alkylation of Primary or Secondary Amines	613
4.4.28.10.2	Variation 2: <i>O</i> - and <i>N</i> -Alkylation of Masked Hydroxy or Amino Groups ..	614

4.4.28.11	Method 11:	From α -Metallosilanes	615
4.4.28.12	Method 12:	From Acylsilanes	616
4.4.28.12.1	Variation 1:	Via Asymmetric Reduction with <i>B</i> -Chlorodiisopinocampheylborane	616
4.4.28.12.2	Variation 2:	Via Samarium(II) Iodide Promoted Reductions and Alkylations	617
4.4.28.12.3	Variation 3:	Via Addition of Organolithium or Organomagnesium Reagents	618
4.4.28.12.4	Variation 4:	Via Barbier-type Addition of Organoindium Reagents	619
4.4.28.13	Method 13:	From Vinylsilanes	620
4.4.28.13.1	Variation 1:	Via Hydroboration	620
4.4.28.13.2	Variation 2:	Via Catalytic Dihydroxylation with Osmium Tetroxide	621
4.4.28.14	Method 14:	Modification of Existing α -Silyl Alcohols or Ethers	622
4.4.28.14.1	Variation 1:	Via <i>syn</i> -Dihydroxylation of α -Silyl- α -vinyl Alcohols (α -Hydroxyallylsilanes) with Osmium Tetroxide	622
4.4.28.14.2	Variation 2:	Via O-Alkylation of α -Silyl Alcohols with Allyl and Benzyl Trichloroacetimidoates Catalyzed by Lewis Acids	623
4.4.28.14.3	Variation 3:	Via Addition of α -Lithio- α -silyl Ethers to Aldehydes or Ketones	623
4.4.28.15	Method 15:	Modification of Existing α -Silyl Amines: α -Alkylation or α -Arylation of α -Silylamines with Grignard Reagents	624
4.4.28.16	Additional Methods		625
	Applications of Product Subclass 28 in Organic Synthesis		626
4.4.29	Product Subclass 29: α,β-Epoxyasilanes		
	G. H. Whitham		
4.4.29	Product Subclass 29: α,β-Epoxyasilanes 633		
	Synthesis of Product Subclass 29 633		
4.4.29.1	Method 1:	By Reaction of Lithiated α -Halosilanes with Aldehydes or Ketones	633
4.4.29.2	Method 2:	By Epoxidation of a Vinylsilane	635
4.4.29.2.1	Variation 1:	Reaction with a Peroxy Acid	635
4.4.29.2.2	Variation 2:	Sharpless Epoxidation of a Silylated Allylic Alcohol	636
4.4.29.3	Method 3:	By Reaction of an α -Metalated Epoxide	636
	Applications of Product Subclass 29 in Organic Synthesis 637		
4.4.29.4	Method 4:	Reduction by Complex Hydrides	637
4.4.29.5	Method 5:	Reaction with Organometallic Reagents	638
4.4.29.6	Method 6:	Reaction with Heteroatom Nucleophiles	639
4.4.29.7	Method 7:	Ring Opening/Desilylation to Aldehydes or Ketones	640
4.4.29.8	Method 8:	Protodesilylation to Epoxides	641
4.4.29.9	Method 9:	Formation of α -Alkoxy Ketones via Allene Epoxides	641
4.4.29.10	Method 10:	Rearrangement to α -Silylaldehydes or α -Silyl Ketones	642
4.4.29.11	Method 11:	Rearrangement to Silyl Enol Ethers	643
4.4.29.12	Method 12:	Rearrangement to C-Silylated Allylic Alcohols	643
4.4.29.13	Method 13:	Rearrangement to Allylic Silanols	644
4.4.29.14	Method 14:	α -Metalation	645

4.4.30	Product Subclass 30: Alkynyl[Ethynyl]silanes T. Hiyama and A. Mori	
<hr/>		
4.4.30	Product Subclass 30: Alkynyl[Ethynyl]silanes	647
	Synthesis of Product Subclass 30	647
4.4.30.1	Method 1: Reaction of Alkynes with Hydrosilanes via Dehydrogenative Coupling	647
4.4.30.2	Method 2: Reactions of Alkynylmetals with Silyl Halides	647
4.4.30.2.1	Variation 1: Of Chlorosilanes with Ethynylmagnesium Reagents	648
4.4.30.2.2	Variation 2: Of Chlorosilanes with Ethynyllithium Reagents	648
4.4.30.2.3	Variation 3: Of Chlorosilanes with Ethynylzinc Reagents	649
4.4.30.3	Method 3: Reactions of Ethynyl(trimethyl)silane or Bis(trimethylsilyl)ethyne	649
4.4.30.3.1	Variation 1: The Sonogashira–Hagihara Reaction of Ethynyl(trimethyl)silane	649
4.4.30.3.2	Variation 2: Reactions of Bis(trimethylsilyl)ethyne with Various Organic Electrophiles	650
4.4.30.4	Methods 4: Additional Methods	650
	Applications of Product Subclass 30 in Organic Synthesis	651
4.4.30.5	Method 5: Reactions of Ethynylsilanes with Carbonyl Compounds	651
4.4.30.6	Method 6: Asymmetric Alkynylation of Chiral Acetals	652
4.4.30.7	Method 7: Alkynylation of Acid Chlorides in the Presence of a Copper(I) Salt	653
4.4.30.8	Method 8: Coupling Reactions of Ethynylsilanes in the Presence of Transition Metals	653
4.4.31	Product Subclass 31: Silylketenes J.-M. Pons and P. J. Kocienski	
<hr/>		
4.4.31	Product Subclass 31: Silylketenes	657
	Synthesis of Product Subclass 31	658
4.4.31.1	Method 1: Elimination Reactions	658
4.4.31.2	Method 2: Thermolysis of (Alkoxyethynyl)silanes (1,5-Hydrogen Transfer)	659
4.4.31.3	Method 3: Rearrangement by 1,3-Silyl Shift	660
4.4.31.3.1	Variation 1: From Alkoxyalkynes	660
4.4.31.3.2	Variation 2: From 2-Phenyl-2,3-dihydrofuran or 3-Phenylisoxazole	661
4.4.31.4	Method 4: From Diazo Compounds via Wolff Rearrangement	662
4.4.31.4.1	Variation 1: Photolysis	662
4.4.31.4.2	Variation 2: Metal (Copper or Rhodium) Catalysis	662
4.4.31.5	Method 5: Thermolysis or Photolysis of Cyclobutenediones or Cyclobutenones	663
	Applications of Product Subclass 31 in Organic Synthesis	663

4.4.31.6	Method 6:	Formation of β -Lactones via Lewis Acid Promoted [2+2]-Cycloaddition Reaction	664
4.4.31.7	Method 7:	Formation of Aza-Allenic Derivatives and Their Further Electrocyclization	664
4.4.32	Product Subclass 32: Allenylsilanes		
	J. Pornet		
4.4.32	Product Subclass 32: Allenylsilanes		669
	Synthesis of Product Subclass 32		670
4.4.32.1	Method 1:	From Lithiated Allenes and Trialkylhalosilanes	670
4.4.32.2	Method 2:	From Allenyl Ethers	671
4.4.32.3	Method 3:	From C-Silylated Propargylic Alcohols	671
4.4.32.3.1	Variation 1:	Via Organocuprates	672
4.4.32.3.2	Variation 2:	Via Grignard Reagents	672
4.4.32.3.3	Variation 3:	Via Arylsulfonohydrazides	673
4.4.32.4	Method 4:	From C-Silylated Propargylic Esters and Organoheterocuprates	673
4.4.32.4.1	Variation 1:	From Silyl-Substituted Propargylic Sulfinates	673
4.4.32.4.2	Variation 2:	From Silyl-Substituted Propargylic Sulfonates	674
4.4.32.5	Method 5:	Silylcupration of Propargylic Esters	675
4.4.32.5.1	Variation 1:	Silylcupration of Propargylic Acetates	675
4.4.32.5.2	Variation 2:	Silylcupration of Propargylic Carbamates	676
4.4.32.6	Method 6:	From Propargylsilanes	677
4.4.32.7	Method 7:	From Silyl-Substituted Ynones	678
4.4.32.8	Method 8:	From Silyl-Substituted Propargylboranes	678
4.4.32.9	Method 9:	From Chloroenynes	679
4.4.32.10	Method 10:	From Bromoallenes	679
4.4.32.11	Method 11:	Via Amide Acetal Claisen Rearrangement of Propargylic Alcohols	680
4.4.32.12	Method 12:	Chain Elongation of Allenylsilanes	680
4.4.32.13	Additional Methods		681
4.4.33	Product Subclass 33: Arylsilanes		
	B. A. Keay		
4.4.33	Product Subclass 33: Arylsilanes		685
	Synthesis of Product Subclass 33		685
4.4.33.1	Method 1:	Via the Würtz–Fittig Reaction	685
4.4.33.2	Method 2:	Silylation of Aryl-Substituted Metals	686
4.4.33.2.1	Variation 1:	Via Grignard Reagents	687
4.4.33.2.2	Variation 2:	Via Organolithium Reagents	688
4.4.33.2.3	Variation 3:	Via Reductive Silylation Followed by Oxidation	689
4.4.33.2.4	Variation 4:	Via Halogen–Metal Exchange	689

4.4.33.3	Method 3:	Electrophilic Aromatic Substitutions	690
4.4.33.4	Method 4:	From Transition-Metal-Catalyzed Reactions	691
4.4.33.4.1	Variation 1:	From Palladium Reagents	691
4.4.33.4.2	Variation 2:	From Nickel and Rhodium Reagents	693
4.4.33.5	Method 5:	From Cycloaddition Reactions	694
4.4.33.5.1	Variation 1:	Via [2+3]-Dipolar Cycloadditions	694
4.4.33.5.2	Variation 2:	Via [4+2] Cycloadditions	695
4.4.33.5.3	Variation 3:	Via [2+2+2] Cycloadditions	696
4.4.33.6	Method 6:	Via Silyl Migrations	697
4.4.33.6.1	Variation 1:	Via [1,3] Oxygen-to-Carbon Silyl Migrations	697
4.4.33.6.2	Variation 2:	Via [1,4] Oxygen-to-Carbon Silyl Migrations	698
4.4.33.7	Method 7:	Via Photochemical Reactions	699
4.4.33.8	Method 8:	Via Electrochemical Reactions	700
4.4.33.9	Methods 9:	Additional Methods	701
		Applications of Product Subclass 33 in Organic Synthesis	701
4.4.33.10	Method 10:	Ipsso-Substitution Reactions	701
4.4.33.11	Method 11:	Oxidation of the C—Si Bond	702
4.4.33.12	Method 12:	Cross-Coupling Reactions	703
4.4.33.13	Method 13:	Protection of Hydroxy Groups	705
4.4.33.14	Method 14:	Use as a Blocking Group	706
4.4.33.15	Method 15:	Use as Traceless Linkers in Solid-Phase Synthesis	707
4.4.33.16	Method 16:	Use as Fluorous Labels for Fluorous Synthesis	708
4.4.34	Product Subclass 34: Vinylsilanes		
	K. Oshima		
4.4.34	Product Subclass 34: Vinylsilanes		713
	Synthesis of Product Subclass 34		713
4.4.34.1	Method 1:	Vinylsilanes from Vinylmetal Compounds and Halosilanes ...	713
4.4.34.1.1	Variation 1:	From Vinylcopper and Trialkylhalosilanes	713
4.4.34.1.2	Variation 2:	From Vinylmagnesium Halides and Trialkyl- and Triarylhalosilanes	714
4.4.34.1.3	Variation 3:	From Vinylsodium and Trialkylhalosilanes	715
4.4.34.1.4	Variation 4:	From Vinyl lithium and Trialkylhalosilanes	715
4.4.34.1.5	Variation 5:	Using Metalated Vinylsilanes	717
4.4.34.2	Method 2:	Coupling Reaction of Vinyl Halides with Silylmetal Species ..	719
4.4.34.3	Method 3:	Addition–Elimination of Disilane to Vinyl Halides	720
4.4.34.4	Method 4:	Coupling Reaction of (α - or β -Halovinyl)silanes with Silylmetal Species	721
4.4.34.5	Method 5:	Stille Coupling of Vinyl Halides with Trimethyl[(<i>E</i>)-2-(trimethylstannyl)vinyl]silane	723
4.4.34.6	Method 6:	Reaction of Carbonyl Compounds with (Trimethylsilyl)methylmetal Species	724
4.4.34.6.1	Variation 1:	Reaction of Aldehydes with Bis(trimethylsilyl)methyl lithium ..	724

4.4.34.6.2	Variation 2:	Reaction of Aldehydes with Bromobis(trimethylsilyl)methylithium: Preparation of (α -Bromovinyl)silanes	725
4.4.34.6.3	Variation 3:	Reaction of Carbonyl Compounds with Dimetal Species Derived from (Dibromomethyl)(trimethyl)silane	727
4.4.34.7	Method 7:	By Wittig Reaction	728
4.4.34.8	Method 8:	From Allylsilane Lithium Salt	729
4.4.34.9	Method 9:	Dehydrogenative Silylation of Alkenes	729
4.4.34.10	Method 10:	Heck-type Reaction	730
4.4.34.11	Method 11:	Hydrogenation of Alkynylsilanes	731
4.4.34.12	Method 12:	Hydrometalation of Alkynylsilanes	732
4.4.34.12.1	Variation 1:	Hydrostannylation of Alkynylsilanes	732
4.4.34.12.2	Variation 2:	Hydroalumination of Alkynylsilanes	732
4.4.34.12.3	Variation 3:	Hydromagnesiation of Alkynylsilanes	734
4.4.34.13	Method 13:	Carbocupration of Alkynylsilanes	735
4.4.34.14	Method 14:	From Low-Valent Titanium Alkoxide–Alkynylsilane Complexes	735
4.4.34.15	Method 15:	Radical Addition of Iodoalkanes to Alkynylsilanes	736
4.4.34.16	Method 16:	[2 + 4] or [2 + 2] Cycloadditions of Alkynylsilanes	737
4.4.34.17	Method 17:	Cyclization of Alk- ω -en- α -ylsilanes	737
4.4.34.18	Method 18:	Silylmetalation of Terminal Alkynes	738
4.4.34.19	Method 19:	Hydrosilylation	740
4.4.34.19.1	Variation 1:	Hydrosilylation of Alkynes	740
4.4.34.19.2	Variation 2:	Transition-Metal-Catalyzed Hydrosilylative Cyclization of Dialkynes	742
4.4.34.20	Method 20:	Birch Reduction of Arylsilanes	743
		Applications of Product Subclass 34 in Organic Synthesis	743
4.4.34.21	Method 21:	Proto- and Deuterodesilylation	744
4.4.34.22	Method 22:	Cleavage of the Vinyl C–Si Bond with Tetrabutylammonium Fluoride	744
4.4.34.23	Method 23:	Electrophilic Substitution with Halogens	745
4.4.34.24	Method 24:	Friedel–Crafts Acylation	746
4.4.34.25	Method 25:	Formylation of Vinylsilanes	747
4.4.34.26	Method 26:	Nazarov Cyclization	747
4.4.34.27	Method 27:	Diels–Alder Reaction of (1E-Buta-1,3-dienyl)trimethylsilanes	748
4.4.34.28	Method 28:	Annulation Reaction of 3-(Trimethylsilyl)but-3-en-2-one	749
4.4.34.29	Method 29:	Preparation of Allenes	751
4.4.34.30	Method 30:	Preparation of Carboxylic Acids from Terminal Alkynes	752
4.4.34.31	Method 31:	Use as a Masked Carbonyl Group	752
4.4.34.32	Method 32:	Vinyl Heck Reaction	753
4.4.34.33	Method 33:	Palladium-Catalyzed Coupling	753
4.4.34.34	Method 34:	Generation of Vinylidene Carbene	754

4.4.35	Product Subclass 35: α-Silyl Carbonyl Compounds Y. Landais	
<hr/>		
4.4.35	Product Subclass 35: α-Silyl Carbonyl Compounds	757
	Synthesis of Product Subclass 35	761
4.4.35.1	Method 1: C-Silylation of Enolates and Derivatives	761
4.4.35.1.1	Variation 1: Of Chiral Hydrazones	762
4.4.35.2	Method 2: Oxidation of β -Hydroxysilanes	763
4.4.35.3	Method 3: Metal–Carbenoid Insertion into the Si–H Bond	763
4.4.35.4	Method 4: Addition of Nucleophiles to α -Silyl Ketenes	764
4.4.35.5	Method 5: Addition of α -Silyl Organometallic Reagents to Carbonyl Precursors	766
4.4.35.6	Method 6: Rearrangements	766
4.4.35.6.1	Variation 1: Isomerization of α,β -Epoxy-silanes	767
4.4.35.6.2	Variation 2: [1,3]-Oxygen-to-Carbon Migration of a Silicon Group	768
4.4.35.7	Additional Methods	769
4.4.36	Product Subclass 36: β-Silyl Alkyl Halides W. E. Billups and R. K. Saini	
<hr/>		
4.4.36	Product Subclass 36: β-Silyl Alkyl Halides	773
	Synthesis of Product Subclass 36	774
4.4.36.1	Method 1: Addition of Hydrogen Halides to Allylsilane and Vinylsilanes ..	774
4.4.36.2	Method 2: Addition of Halogens to Allylsilane and Vinylsilanes	775
4.4.36.3	Method 3: Addition of Sulfur and Selenium Halides to Vinylsilanes and Allylsilanes	776
4.4.36.4	Method 4: Addition of Radicals	777
4.4.36.5	Method 5: Formation of (2-Halocyclopropyl)silanes by Addition of Halocarbenes to Alkenylsilanes and Allenylsilanes	778
4.4.36.6	Method 6: From Allylic Substitution of 1,2-Dihaloallyl Groups Using Trimethylsilyllithium and Copper(I) Iodide Reagent	780
4.4.36.7	Method 7: From Halogenation of (2-Hydroxyalkyl)silanes	780
4.4.36.8	Method 8: From Halogenation of β -Silyl Carbonyl Compounds, α -Silylenol Ethers, or α -Silylenolates	781
4.4.36.8.1	Variation 1: From β -Silyl Carbonyl Compounds	782
4.4.36.8.2	Variation 2: From α -Silylenol Ethers or α -Silylenolates of Acylsilanes	782
4.4.36.9	Additional Methods	783
	Applications of Product Subclass 36 in Organic Synthesis	784

4.4.37	Product Subclass 37: β-Silyl Alcohols and the Peterson Reaction D. J. Ager	
4.4.37	Product Subclass 37: β-Silyl Alcohols and the Peterson Reaction	789
	Synthesis of Product Subclass 37	791
4.4.37.1	Method 1: Direct Deprotonation of a Silane and Addition to a Carbonyl Compound	791
4.4.37.2	Method 2: From Silylmethylmagnesium Halides and Carbonyl Compounds	792
4.4.37.2.1	Variation 1: Grignard and Organolithium Reagents	792
4.4.37.2.2	Variation 2: Use of Organocerium Reagents	793
4.4.37.2.3	Variation 3: Formation of Vinylolithium Reagents	794
4.4.37.3	Method 3: Generation of the α -Silyl Carbanion by Transmetalation	794
4.4.37.3.1	Variation 1: Displacement of a Phenylsulfanyl Group by Lithium Naphthalenide	795
4.4.37.3.2	Variation 2: Displacement of a Phenylsulfanyl Group by Lithium 1-(Dimethylamino)naphthalenide	795
4.4.37.3.3	Variation 3: Displacement of a Tin Group	796
4.4.37.4	Method 4: Preparation of Vinyl Ethers and Other Heteroatom-Substituted Alkenes	796
4.4.37.4.1	Variation 1: Preparation of Enol Ethers	797
4.4.37.4.2	Variation 2: Preparation of Vinyl Sulfides	797
4.4.37.4.3	Variation 3: Preparation of Vinyl Sulfones	798
4.4.37.4.4	Variation 4: Preparation of Vinylphosphonates	798
4.4.37.4.5	Variation 5: Preparation of Vinylstannanes	798
4.4.37.4.6	Variation 6: Preparation of Difunctional Alkenes	799
4.4.37.5	Method 5: Preparation of α,β -Unsaturated Carbonyl Compounds	799
4.4.37.5.1	Variation 1: Formation of α,β -Unsaturated Esters	800
4.4.37.5.2	Variation 2: Formation of α,β -Unsaturated Esters with Lithium Dicyclohexylamide as Base	800
4.4.37.6	Method 6: Preparation of α,β -Unsaturated Nitriles	800
4.4.37.7	Method 7: Preparation of Enals Through Imines	801
4.4.37.8	Method 8: Reduction of α -Silyl Carbonyl Compounds	801
4.4.37.9	Method 9: Additions of Organometallic Reagents to α -Silyl Carbonyl Compounds	802
4.4.37.9.1	Variation 1: Addition of an Organometallic Reagent to an α -Silyl Ketone ..	802
4.4.37.9.2	Variation 2: Addition of an Organometallic Reagent to an α -Silyl Ester ..	803
4.4.37.10	Method 10: Addition of a Silylmetal to an Epoxide	804
4.4.37.11	Method 11: Vinylsilanes and Alkylolithiums with Carbonyl Compounds	804

4.4.38	Product Subclass 38: Propargylsilanes J. Pornet	
<hr/>		
4.4.38	Product Subclass 38: Propargylsilanes	811
	Synthesis of Product Subclass 38	812
4.4.38.1	Method 1: From Propargylmagnesium Halides and Trialkyl- and Triarylsilicon Halides	812
4.4.38.1.1	Variation 1: Generation of the Grignard Reagent In Situ (Barbier Procedure)	812
4.4.38.1.2	Variation 2: Silylation of a Preformed Grignard Reagent	813
4.4.38.2	Method 2: From Alk-1-yne	813
4.4.38.2.1	Variation 1: Coupling with (Halomethyl)trimethylsilane	813
4.4.38.2.2	Variation 2: Coupling with Trimethylsilylmethyl Trifluoromethanesulfonate	814
4.4.38.3	Method 3: From Alk-2-yne	815
4.4.38.4	Method 4: From 1,3-Dilithiated Alk-1-yne	815
4.4.38.5	Method 5: From 1-(Trimethylsilyl)alk-1-yne	816
4.4.38.6	Method 6: From 1,3-Bis(trimethylsilyl)alk-1-yne	817
4.4.38.7	Method 7: From 1-Bromoalk-1-yne	817
4.4.38.7.1	Variation 1: Via Asymmetric Grignard Cross Coupling	817
4.4.38.7.2	Variation 2: Via Borinate Ester Cross Coupling	818
4.4.38.8	Method 8: From Benzyl Propargyl Ethers	818
4.4.38.9	Method 9: From α -Silylated Aldehydes	819
4.4.38.10	Method 10: From β -Silylated Esters	820
4.4.38.11	Method 11: Chain Elongation from the Propargylic Carbon of Trimethyl(propargyl)silanes	820
4.4.38.12	Method 12: Chain Elongation from the Acetylenic Carbon of Trimethyl(propargyl)silanes	821
4.4.38.13	Additional Methods	822
4.4.39	Product Subclass 39: Benzylsilanes B. Bennetau	
<hr/>		
4.4.39	Product Subclass 39: Benzylsilanes	825
	Synthesis of Product Subclass 39	825
4.4.39.1	Method 1: From Benzylic Hydrogens	825
4.4.39.2	Method 2: From Benzylic Halogens	827
4.4.39.2.1	Variation 1: Via Benzylmagnesium Reagents	827
4.4.39.2.2	Variation 2: Via Benzyllithium Reagents	828
4.4.39.3	Method 3: By Substitution of Aromatic Hydrogens	828
4.4.39.4	Method 4: By Substitution of Aromatic Halogens	829
4.4.39.5	Method 5: By Hydrosilylation of Styrene Derivatives	830
4.4.39.6	Method 6: By Addition of Silylmetal Reagents	831
4.4.39.7	Methods 7: Additional Methods	832

	Applications of Product Subclass 39 in Organic Synthesis	832
4.4.39.8	Method 8: Benzylsilanes in Organic Synthesis	832
4.4.40	Product Subclass 40: Allylsilanes T. K. Sarkar	
4.4.40	Product Subclass 40: Allylsilanes	837
	Synthesis of Product Subclass 40	839
4.4.40.1	Method 1: From Allylmagnesium Halides and Trialkylhalosilanes	839
4.4.40.1.1	Variation 1: Silylation of a Preformed Grignard Reagent	840
4.4.40.1.2	Variation 2: Silylation of an In Situ Generated Grignard Reagent	841
4.4.40.2	Method 2: From Allylmagnesium Halides by Transition-Metal-Catalyzed Coupling with Hydrosilanes	841
4.4.40.3	Method 3: From Allyl Chlorides by Zinc-Mediated Silylation	842
4.4.40.4	Method 4: From Allyl Halides by Electroreductive Synthesis	842
4.4.40.5	Method 5: By Silylation of Metalated Alkenes	843
4.4.40.5.1	Variation 1: From Lithiated Alkenes	843
4.4.40.5.2	Variation 2: From Alkenylpotassium Compounds	844
4.4.40.6	Method 6: From Metalated Allyl Halides and Chlorotrimethylsilane	846
4.4.40.7	Method 7: From α -Heteroalkenes by Transition-Metal-Catalyzed Cross Coupling	846
4.4.40.7.1	Variation 1: From Vinyl Halides With [(Trimethylsilyl)methyl]magnesium Halides and Related Species	846
4.4.40.7.2	Variation 2: From Enol Phosphates with [(Trialkylsilyl)methyl]magnesium Halides	848
4.4.40.7.3	Variation 3: From Vinyl Trifluoromethanesulfonates with Tris[(trimethylsilyl)methyl]aluminum	848
4.4.40.8	Method 8: From α -Silyl Aldehydes and Alkylidinetriphenylphosphoranes by a Wittig Reaction	849
4.4.40.9	Method 9: From Carbonyl Compounds and Trialkyl[2-(trimethylsilyl)ethylidene]phosphoranes by a Wittig Reaction	850
4.4.40.9.1	Variation 1: Via a Preformed β -Silylated Phosphonium Salt	850
4.4.40.9.2	Variation 2: Via an In Situ Generated β -Silylated Phosphonium Salt	851
4.4.40.10	Method 10: From Carbonyl Compounds and Ethyl 2-(Diethoxyphosphoryl)- 3-(trimethylsilyl)propanoate by Horner–Wadsworth–Emmons Reaction	851
4.4.40.11	Method 11: From Carbonyl Compounds and β -Silyl Thioacetals by Titanium(II)-Promoted Reductive Alkenation	852
4.4.40.12	Method 12: From Carbonyl Compounds and Trimethyl[2-(phenylsulfonyl)ethyl]silane by the Julia Reaction	853
4.4.40.13	Method 13: Formation of Exocyclic Allylsilanes by the Ramberg–Bäcklund Reaction	854

4.4.40.14	Method 14:	From 1,3-Dienes by Hydrosilylation	855
4.4.40.15	Method 15:	From 1,3-Dienes by Carbosilylation	856
4.4.40.16	Method 16:	From Allyl Halides by Copper(I)-Catalyzed Silylation with Trichlorosilane	857
4.4.40.17	Method 17:	From Allenes by Palladium(0)-Catalyzed Carbosilylation	857
4.4.40.18	Method 18:	From Lithium Allyl Alcoholates and Hexamethyldisilane	858
4.4.40.19	Method 19:	From Allyl Esters via Allylpalladium(0) Complexes	859
4.4.40.19.1	Variation 1:	Using Disilanes	859
4.4.40.19.2	Variation 2:	Using Samarium(II) Iodide and Chlorotrimethylsilane	860
4.4.40.20	Method 20:	From Allyl Alcohols by Palladium(0)-Catalyzed Intramolecular Silylsilylation	861
4.4.40.21	Method 21:	Formation of Bis(allylsilanes) from 1,3-Dienes	862
4.4.40.22	Method 22:	From Allyl Esters or Allyl Carbamates and a Silylcuprate Reagent	863
4.4.40.22.1	Variation 1:	From Allyl Esters	863
4.4.40.22.2	Variation 2:	From Allyl Carbamates	864
4.4.40.23	Method 23:	From Allyl Halides and a Silylcopper Reagent	865
4.4.40.24	Method 24:	Formation of 2-Substituted Allylsilanes by Silylcupration of Allene	866
4.4.40.25	Method 25:	From Allyl Halides or Allyl Phosphates and a Silyllithium Reagent	867
4.4.40.25.1	Variation 1:	From Allyl Halides	867
4.4.40.25.2	Variation 2:	From Allyl Phosphates	868
4.4.40.26	Method 26:	Formation of 1,3-Disubstituted Allylsilanes by Decarboxylative Elimination	869
4.4.40.27	Method 27:	Formation of 1-Substituted Allylsilanes by Grieco Dehydration	871
4.4.40.28	Method 28:	From Alkynes and α -Silyl Organocopper Reagents	872
4.4.40.28.1	Variation 1:	Stoichiometric Carbocupration with a Copper(I) Salt	872
4.4.40.28.2	Variation 2:	Copper-Catalyzed Carbometalation of Alk-2-yn-1-ols	873
4.4.40.29	Method 29:	From Mixed Vinylcuprates and (Iodomethyl)trimethylsilane or Related Reagents	874
4.4.40.30	Method 30:	From Carboxylic Acid Derivatives and an Organocerium Reagent by a Peterson-type Reaction	874
4.4.40.31	Method 31:	From γ -Silylated Allylic Alcohols by a Claisen Rearrangement	876
4.4.40.31.1	Variation 1:	By a Johnson Ortho Ester Claisen Rearrangement	876
4.4.40.31.2	Variation 2:	By an Ireland–Claisen Rearrangement	877
4.4.40.31.3	Variation 3:	By the Eschenmoser Variant of the Claisen Rearrangement	878
4.4.40.32	Method 32:	From 1-Trimethylsilyl-1,3-dienes by a Diels–Alder Reaction	879
4.4.40.33	Method 33:	Formation of Cyclopentanoid Allylsilanes by an Intramolecular Ene Reaction	879
4.4.40.34	Method 34:	From Alkenyl Fischer Carbene Complexes by a [2 + 1]-Insertion Reaction with Triorganosilanes	880
4.4.40.35	Method 35:	From Vinyldiazo Carbonyl Compounds by a Rhodium-Catalyzed [2 + 1]-Insertion Reaction with Triorganosilanes	881
4.4.40.36	Method 36:	Formation of Formyl-Substituted Alk-2-enylsilanes by Photolysis	882

4.4.40.37	Method 37:	From Allyl Sulfides by Reductive Silylation	883
4.4.40.37.1	Variation 1:	By Retro-[1,4]-Brook Rearrangement	883
4.4.40.37.2	Variation 2:	By Silylation of Oxyanion–Carbanionic Species	883
4.4.40.38	Method 38:	From Allyl Sulfides and Tris(trimethylsilyl)silane by a Radical Reaction	884
4.4.40.39	Method 39:	From Allyl Sulfones	885
4.4.40.40	Method 40:	Formation of 3-Substituted Allylsilanes by a Peterson-type Elimination	886
4.4.40.41	Method 41:	Formation of 3-Substituted Allylsilanes by Silicon-Directed Bamford–Stevens Reaction	886
4.4.40.42	Method 42:	From γ -Silylated Allylic Esters or Allyl Carbonates by a Palladium(0)-Catalyzed Reduction	887
4.4.40.42.1	Variation 1:	From Allylic Esters	887
4.4.40.42.2	Variation 2:	From Allylic Carbonates	888
4.4.40.43	Method 43:	From Alk-2-ynylsilanes by Hydroalumination	889
4.4.40.44	Method 44:	From Prop-2-ynylsilanes by Hydroboration	890
4.4.40.45	Method 45:	From Alk-2-ynylsilanes by Catalytic Hydrogenation	890
4.4.40.46	Method 46:	Formation of Exocyclic Allylsilanes by Intramolecular Reductive Heck Cyclization of Alk-2-ynylsilanes	891
4.4.40.47	Method 47:	Formation of 3-Substituted Allylsilanes by Cross Metathesis	892
4.4.40.47.1	Variation 1:	By Molybdenum-Catalyzed Cross Metathesis	892
4.4.40.47.2	Variation 2:	By Ruthenium-Catalyzed Cross Metathesis	893
4.4.40.47.3	Variation 3:	By Titanium(II)-Induced Cross Metathesis	893
4.4.40.48	Method 48:	Formation of 2-Substituted Allylsilanes by the Heck Reaction	894
4.4.40.49	Method 49:	From [2-(Iodomethyl)allyl]trimethylsilane by Indium-Mediated Allylsilylation of Aldehydes or Ketones	896
4.4.40.50	Method 50:	From [2-(Silylmethyl)allyl]lithium by a Condensation Reaction	896
4.4.40.51	Method 51:	From (2-Stannylallyl)silanes by Palladium(0)-Catalyzed Cross Coupling with Acid Chlorides or Aryl Bromides	897
4.4.40.52	Method 52:	From [2-(Stannylmethyl)allyl]silanes by Radical Allylsilylation with Alkyl Halides	898
4.4.40.53	Method 53:	From [2-(Stannylmethyl)allyl]silanes by Thermal Allylsilylation with Acid Chlorides or Aldehydes	899
4.4.40.54	Methods 54:	Additional Methods	899
		Applications of Product Subclass 40 in Organic Synthesis	901
4.4.40.55	Method 55:	Protodesilylation of Allylsilanes	901
4.4.40.56	Method 56:	Allylation of Reactive Alkyl Halides	902
4.4.40.57	Method 57:	Radical Allylation of Alkyl Halides	903
4.4.40.58	Method 58:	Addition to Epoxides and Oxetanes	903
4.4.40.59	Method 59:	Allylation of Aldehydes and Ketones	905
4.4.40.59.1	Variation 1:	By Lewis Acid Catalyzed Allylation	905
4.4.40.59.2	Variation 2:	By Lewis Base Promoted Allylation	907
4.4.40.60	Method 60:	Allylation of Acetals and Ketals	908
4.4.40.61	Method 61:	Acylation with Acid Chloride	909
4.4.40.62	Method 62:	Reaction with Iminium Ions	910
4.4.40.63	Method 63:	Epoxidation and Ring Opening	910

4.4.40.64	Method 64:	Aziridination and Ring Opening	911
4.4.40.65	Method 65:	Dihydroxylation of Allylsilanes	912
4.4.40.66	Method 66:	Conjugate Addition to α,β -Unsaturated Carbonyl Compounds	913
4.4.40.67	Method 67:	Palladium(0)-Catalyzed [3 + 2] Cycloaddition	915
4.4.40.68	Method 68:	[3 + 4] Allyl Cation Cycloaddition	916
4.4.40.69	Method 69:	Hydroxycyclopentanes from [3 + 2] Annulation with α -Enones	917
4.4.40.70	Method 70:	Tetrahydrofurans by [3 + 2] Annulation with Aldehydes and Ketones	918
4.4.40.71	Method 71:	α -Methylenecyclopentanones from Silicon-Directed Nazarov Cyclization	918
4.4.41	Product Subclass 41: β-Silyl Carbonyl Compounds Ian Fleming		
4.4.41	Product Subclass 41: β-Silyl Carbonyl Compounds		
4.4.41.1	Method 1:	Hydrosilylation of Alkynes and Alkenes	929
4.4.41.1.1	Variation 1:	Hydrosilylation of Propargyl Alcohols, and Oxidation or Isomerization	930
4.4.41.1.2	Variation 2:	Hydrosilylation and Dehydrogenation	930
4.4.41.1.3	Variation 3:	Hydrosilylation–Carbonylation	931
4.4.41.2	Method 2:	Silylmetalation of Alkynes and Alkenes	932
4.4.41.2.1	Variation 1:	Silylmetalation of α,β -Unsaturated Carbonyl Compounds	932
4.4.41.2.2	Variation 2:	Silylmetalation and Acylation of Alkynes	934
4.4.41.3	Method 3:	Electrophilic Silylation of Functionalized Three-Carbon Reagents	935
4.4.41.3.1	Variation 1:	Electrophilic Silylation of Allyllithium Reagents	935
4.4.41.3.2	Variation 2:	Electrophilic Silylation at C3 of Masked α,β -Unsaturated Aldehydes and Ketones	936
4.4.41.3.3	Variation 3:	Reductive Silylation of Anisole and Hydrolysis	938
4.4.41.4	Method 4:	Carbonylation or Carboxylation of Vinylsilanes	939
4.4.41.5	Method 5:	Trimethylsilylmethylation of Enolates and Enolate Equivalents	941
4.4.41.6	Method 6:	Claisen Rearrangement of Esters of 3-Silylallyl Alcohols	942
4.4.41.7	Additional Methods		
4.4.42	Product Subclass 42: γ-Silyl Alkyl Halides, Alcohols, and Esters Thereof J. P. Michael and C. B. de Koning		
4.4.42	Product Subclass 42: γ-Silyl Alkyl Halides, Alcohols, and Esters Thereof ..		
4.4.42.1	Method 1:	From Silyl Anions and Functionalized Three-Carbon Electrophiles	949
4.4.42.2	Method 2:	From Silicon Electrophiles and Functionalized Three-Carbon Nucleophiles	950
4.4.42.2.1	Variation 1:	Intermolecular Silylation of C,O-Dianions Derived from Functionalized Alcohols	950

4.4.42.2.2	Variation 2:	Silicon Transfer in 3-Siloxy Carbanions: The Retro-[1,4]-Brook Rearrangement	951
4.4.42.3	Method 3:	From α -Silylated Carbanions and Epoxides	953
4.4.42.4	Method 4:	Hydrosilylation of Allylic Compounds	955
4.4.42.4.1	Variation 1:	Hydrosilylation of Allylic Halides, Alcohols, and Esters	955
4.4.42.4.2	Variation 2:	Intramolecular Hydrosilylation of Allyloxysilanes	956
4.4.42.5	Method 5:	Coupling between Vinylsilanes and Aldehydes or Ketones ..	958
4.4.42.5.1	Variation 1:	Carbozirconation of Vinylsilanes	958
4.4.42.5.2	Variation 2:	Coupling Initiated by Electron Transfer	959
4.4.42.6	Method 6:	Additions to Allylsilanes	960
4.4.42.6.1	Variation 1:	Hydrometalation–Oxidation of Allylsilanes	960
4.4.42.6.2	Variation 2:	Carbometalation of Allylsilanes	961
4.4.42.6.3	Variation 3:	Free-Radical Addition to Allylsilanes	962
4.4.42.7	Method 7:	Addition of β -Silylated Carbanions to Aldehydes and Ketones	963
4.4.42.7.1	Variation 1:	Addition of β -Silyl Organometallic Reagents to Aldehydes and Ketones	963
4.4.42.7.2	Variation 2:	Condensation of β -Silyl Enolates with Carbonyl Compounds	964
4.4.42.8	Additional Methods	966
