9.2.2 **Product Subclass 2: Thiirene 1,1-Dioxides** ........................................ 48

9.2.2.1 Synthesis by Ring-Closure Reactions ........................................ 49

9.2.2.1.1 Method 1: From \(\alpha,\alpha\)-Dihalo-Substituted Sulfoxides .............. 49

9.2.2.2 Aromatization ........................................................................... 50

9.2.2.2.1 Method 1: Dehydrohalogenation of 2-Halothiiranes .................. 50

9.2.3 **Product Subclass 3: Thiirene 1-Oxides** ...................................... 52

9.2.3.1 Synthesis by Ring-Closure Reactions ........................................ 53

9.2.3.1.1 Method 1: From \(\alpha,\alpha\)-Dihalo-Substituted Sulfoxides .............. 53

9.2.3.2 Aromatization ........................................................................... 54

9.2.3.2.1 Method 1: Fused Thiirene 1-Oxides from Diels–Alder Reactions of 2,3-Bis(alkylidene)thiirane 1-Oxides .......................... 54

9.2.4 **Product Subclass 4: Thiirenium Ions** ......................................... 55

9.2.4.1 Synthesis by Ring-Closure Reactions ........................................ 56

9.2.4.1.1 Method 1: Addition of a Sulfonium Ion to Alkynes ..................... 56

9.2.4.1.2 Method 2: From 1-Halo-2-sulfanylethenes ................................. 57

9.3 **Product Class 3: Selenirenes**
N. Tokitoh and W. Ando

9.3 **Product Class 3: Selenirenes** ..................................................... 61

9.3.1 Synthesis by Ring Transformation .............................................. 61

9.3.1.1 Method 1: From 1,2,3-Selenadiazoles ....................................... 61

9.3.1.1.1 Variation 1: Photocatalytic Decomposition in a Matrix .......... 61

9.3.1.1.2 Variation 2: Photocatalytic Decomposition in Solution .......... 62

9.4 **Product Class 4: Tellurirenes**
N. Tokitoh and W. Ando

9.4 **Product Class 4: Tellurirenes** ..................................................... 65

9.5 **Product Class 5: 1H-Azirines**
K.-P. Zeller

9.5 **Product Class 5: 1H-Azirines** ..................................................... 67

9.5.1 Synthesis by Ring-Closure Reactions ........................................... 68

9.5.1.1 By Formation of Two N–C Bonds ............................................. 68

9.5.1.1.1 Fragments C=N and C=N ...................................................... 68

9.5.1.1.1.1 Method 1: Reactions of Alkynes with Nitrenes or Nitrene Equivalents ................................................................. 68

9.5.1.1.1.1 Variation 1: Generation of Nitrene (NH) from Hydrazoic Acid ...................................................... 68

9.5.1.1.1.2 Variation 2: Generation of Nitrenes from Organic Azides .......... 68

9.5.1.1.1.3 Variation 3: Oxidation of N-Aminophthalimidines in the Presence of Alkynes ................................................................. 69
By Formation of One N—C Bond

Fragment N—C

Method 1: Cyclization of α-Imino Carbenes

Variation 1: Generation of α-Imino Carbenes from 1H-1,2,3-Triazoles

Variation 2: Generation of α-Imino Carbenes from α-Diazo Imines

Variation 3: Generation of Cyclic α-Imino Carbenes from 1H-1,2,3-Benzotriazoles (Formation of 1H-Benzob[1]azirines)

Variation 4: Generation of Cyclic α-Imino Carbenes from Isatin and Its Derivatives (Formation of 1H-Benzob[1]azirines)

Method 2: Cyclization of Vinylnitrenes

By Formation of One C—C Bond

Fragment C—N—C

Synthesis by Ring Transformation

Method 1: Extrusion Reactions of Larger Heterocycles

Aromatization

Method 1: Isomerization of Cyclic Isomers

Method 2: β-Elimination from Aziridines

Method 3: Cycloreversion Reactions of Fused Aziridines

Product Class 6: Phosphirenes

H. Heydt

Product Class 6: Phosphirenes

Product Subclass 1: λ5-1H-Phosphirenes

Synthesis by Substituent Modification

Method 1: Reaction of λ5-1H-Phosphirenes with Benzo-1,2-quinones

Method 2: Reaction of λ5-1H-Phosphirenes with Azodicarboxylates

Method 3: Modification of an Existing λ5-1H-Phosphirene

Product Subclass 2: λ3-1H-Phosphirenium Salts

Synthesis by Ring-Closure Reactions

By Formation of Two P—C Bonds

Method 1: Cycloaddition of Iminophosphines to Alkynes

Synthesis by Substituent Modification

Method 1: Oxidative Addition to λ3-1H-Phosphirenes

Product Subclass 3: λ3-1H-Phosphirene Imides, Oxides, and Homologues

Synthesis by Ring-Closure Reactions

By Formation of Two P—C Bonds

Method 1: Cycloaddition of Electrophilic Phosphorus Compounds to Alkynes

Variation 1: Cycloaddition with Phosphenium Cations

Variation 2: Cycloaddition with Halophosphines
9.6.3.1.1.3 Variation 3: Reaction with Dichlorophosphines ........................................ 93
9.6.3.1.1.4 Variation 4: Reaction with Phosphiranium Cations ........................................ 93
9.6.3.2 Method 1: Alkylation of \( \lambda^3\)-1H-Phosphirenes ........................................ 94
9.6.3.2.1 Variation 1: Alkylation with Alkyl Triflates ...................................................... 94
9.6.3.2.1.2 Variation 2: Alkylation with Trimethylsilyl Tetrafluoroborate ......................... 95
9.6.3.2.2 Method 2: Protonation of \( \lambda^5\)-1H-Phosphirene Imides ................................. 95

9.6.4 Product Subclass 4: \( \eta^1\)-1H-Phosphirene–Metal Complexes ............................... 95

9.6.4.1 Synthesis by Ring-Closure Reactions ................................................................. 102
9.6.4.1.1 Method 1: Cycloaddition of Phosphinidene Complexes to Alkynes .................... 102
9.6.4.1.1.1 Variation 1: With Phosphinidene Complexes Generated from 7-Phospha[2.2.1]hepta-2,5-diene Complexes ................................................................. 102
9.6.4.1.1.2 Variation 2: With Phosphinidene Complexes Generated from \( \lambda^3\)-1H-Phosphirane Complexes ................................................................. 99
9.6.4.1.1.3 Variation 3: With Phosphinidene Complexes Generated from \( \lambda^3\)-2H-1,2-Azaphosphirene Complexes ................................................................. 100
9.6.4.1.1.4 Variation 4: With Phosphinidene Complexes Generated from Secondary \( \lambda^3\)-Phosphine Complexes ................................................................. 101
9.6.4.1.1.5 Variation 5: With Phosphinidene Complexes Generated from Disodium Tetracarbonylferrate (Collman’s Reagent) and an Aminodichlorophosphine ................................. 102

9.6.4.2 Synthesis by Substituent Modification ................................................................. 102
9.6.4.2.1 Method 1: Exchange Reactions with the Substituent at Phosphorus .............. 102
9.6.4.2.2 Method 2: Modification of the Metal Fragment ................................................ 103
9.6.4.2.3 Method 3: Formation of \( \eta^1\)-1H-Phosphirene–Metal Complexes by Complexation of \( \lambda^3\)-1H-Phosphirenes ................................................................. 104

9.6.5 Product Subclass 5: \( \lambda^3\)-1H-Phosphirenes ................................................................. 105

9.6.5.1 Synthesis by Ring-Closure Reactions ................................................................. 106
9.6.5.1.1 Method 1: Cycloaddition of Phosphinidenes to Alkynes .................................. 106
9.6.5.1.1.2 Method 2: \( \lambda^3\)-1H-Phosphirenes from Metallacyclopropenes .................. 107
9.6.5.1.1.3 Method 3: \( \lambda^3\)-1H-Phosphirenes from a Vinylcarbene–Cobalt Complex .... 107
9.6.5.1.2 Method 1: By Formation of One P–C and One C–C Bond ............................. 108
9.6.5.1.2.1 Method 1: Cycloaddition of Carbenes to Phosphaalkynes ......................... 108
9.6.5.1.2.1.1 Variation 1: Cycloaddition with Haloalkanes ....................................... 109
9.6.5.1.2.1.2 Variation 2: Cycloaddition with Chloro(vinyl)carbenes .......................... 110
9.6.5.1.2.1.3 Variation 3: Cycloaddition with a Stable Phosphino(silyl)carbene .......... 111
9.6.5.2 Synthesis by “Aromatization” ................................................................. 111
9.6.5.2.1 Elimination Reactions with \( \lambda^3\)-Phosphiranes ............................................ 112
9.6.5.2.1.1 Method 1: Cycloaddition of Haloalkenes Followed by HX Elimination .... 112
9.6.5.2.1.2 Method 2: Cyclization of Bis(methylene)phosphoranes Followed by 1,2-Elimination ........................................ 112

9.6.5.3 Synthesis by Substituent Modification ........................................ 113
9.6.5.3.1 Method 1: Decomplexation of η1-1H-Phosphirene–Metal Complexes ....................................................... 113
9.6.5.3.1.1 Variation 1: Decomplexation with Iodine and 1-Methyl-1H-imidazole .......................................................... 113
9.6.5.3.1.2 Variation 2: Decomplexation with 1,2-Bis(diphenylphosphino)ethane ..................................................... 114
9.6.5.3.2 Method 2: Reduction of 1-Halo-λ3-1H-phosphireni um Salts with Tertiary Phosphines ........................................ 114
9.6.5.3.3 Method 3: Substitution of Hydrogen at the λ3-1H-Phosphirene Double Bond ...................................................... 115
9.6.5.3.4 Method 4: Substitution of Chlorine in 1-Chloro-λ3-1H-phosphirenes .............................................................. 116
9.6.5.3.4.1 Variation 1: Substitution by Hydrogen with Complex Hydrides ................................................................. 116
9.6.5.3.4.2 Variation 2: Substitution by Lithium and Grignard Nucleophiles .............................................................. 116
9.6.5.3.4.3 Variation 3: Substitution by Boron Functionalities with Lithium, Sodium, or Silver Borates ............... 117
9.6.5.3.4.4 Variation 4: Substitution with Silylated and Stannylated Nucleophiles .................................................... 118

9.6.6 Product Subclass 6: λ3-1H-Phosphirenylium Salts ........................................ 119

9.7 Product Class 7: Three-Membered Rings with Phosphorus and One or More Heteroatoms
H. Heydt

9.7.1 Product Subclass 1: 2λ3-2H-1,2-Azaphirenes ........................................ 125
9.7.1.1 Synthesis by Ring-Closure Reactions ........................................ 126
9.7.1.1.1 By Formation of One P–N and One P–C Bond ........................................ 126
9.7.1.1.1.1 Method 1: From Amino(aryl)carbene Complexes and a P1 Reagent ......................................................... 126
9.7.1.1.1.1.1 Variation 1: Reactions of Amino(aryl)carbene Complexes with Chlorophosphaalkynes ............................ 126
9.7.1.1.1.1.2 Variation 2: Reactions of Amino(aryl)carbene Complexes with Dichlorophosphines ............................ 127

9.7.2 Product Subclass 2: 1λ3,2λ3-1H-Diphosphirenes ........................................ 128
9.7.2.1 Synthesis by Ring-Closure Reactions ........................................ 128
9.7.2.1.1 By Formation of One P–P and One P–C Bond ........................................ 129
9.7.2.1.1.1 Method 1: Cycloaddition of Phosphinidenes or Phosphinidine Equivalents to Phosphaalkynes ........................ 129
9.7.2.1.1.1.1 Variation 1: Cycloaddition with Iminophosphines ........................................ 129
9.7.2.1.1.1.2 Variation 2: Cycloaddition with Phosphinidine Complexes ........................................ 129
9.7.2.1.1.1.3 Variation 3: Cycloaddition with Halo(silyl)phosphines ........................................ 130
9.7.2.1.1.2 Method 2: Cyclooligomerization of Phosphaalkynes under the Influence of Lewis Acids ........................ 130
9.7.2.1.2 By Formation of One P–P Bond ........................................ 131
9.7.2.1.2.1 Method 1: Cyclization of Aminophosphino-Substituted Phosphaalkynes ........................................ 131

9.8.6.1.1 Synthesis by Ring Contraction

9.8.6.1.1.1 Method 1: From 1,2,3,4\(\text{C}\)5-Triazaphosphinines

9.8.6.1.2 Synthesis by Ring Enlargement

9.8.6.1.2.1 Method 1: From 2-[Bis(dialkylamino)phosphino]-2\(\text{H}\)-azirines

9.8.7 Product Subclass 7: 1\(\text{L}\)\(\text{L}\),3\(\text{L}\)\(\text{L}\)-Diphosphetes

9.8.7.1 Synthesis by Ring-Closure Reactions

9.8.7.1.1 By Formation of Two P—C Bonds

9.8.7.1.1.1 Method 1: From Alkylidenephosphoranes

9.8.7.1.1.1.1 Variation 1: From [Chloro(phosphino)methylene]phosphoranes

9.8.7.1.1.2 Method 2: From Diazophosphino(phosphoryl)methanes

9.8.7.1.1.3 Method 3: From Diazophosphino(trimethylsilyl)methanes

9.8.7.1.1.4 Method 4: From [Bis(trimethylsilyl)methyl]dichlorophosphine

9.8.7.2 Synthesis by Substituent Modification

9.8.7.2.1 Method 1: From 1,1,3,3-Tetrakis(dimethylamino)-1\(\text{L}\)\(\text{L}\),3\(\text{L}\)\(\text{L}\)-diphosphete by Substitution at Ring Carbon Atoms

9.8.8 Product Subclass 8: 1\(\text{L}\)\(\text{L}\),2\(\text{L}\)\(\text{L}\)-Diphosphetes

9.8.8.1 Synthesis by Ring Transformation

9.8.8.1.1 Synthesis by Ring Enlargement

9.8.8.1.1.1 Method 1: From a 2-Phosphino-2\(\text{H}\)-phosphirene

9.8.9 Product Subclass 9: 1\(\text{L}\)\(\text{L}\),2\(\text{L}\)\(\text{L}\)-Diphosphetes

9.8.9.1 Synthesis by Ring-Closure Reactions

9.8.9.1.1 By Formation of Two P—C Bonds

9.8.9.1.1.1 Method 1: From Phosphaalkynes in the Coordination Sphere of Titanium

9.8.9.2 Aromatization

9.8.9.2.1 Method 1: From a 1,2-Dichloro-1,2-dihydro-1,2-diphosphete–Diiron Complex

9.8.10 Product Subclass 10: 1\(\text{L}\)\(\text{L}\),3\(\text{L}\)\(\text{L}\)-Diphosphetes

9.8.10.1 Synthesis by Ring-Closure Reactions

9.8.10.1.1 By Formation of Two P—C Bonds

9.8.10.1.1.1 Method 1: From Phosphaalkynes in the Coordination Sphere of Transition Metals

9.8.10.1.1.1.1 Variation 1: From Phosphaalkynes and Transition-Metal–Alkene Complexes

9.8.10.1.1.1.2 Variation 2: From Phosphaalkynes and Transition-Metal Carbonyls

9.8.10.1.1.1.3 Variation 3: From Phosphaalkynes and Transition-Metal–Arene Complexes

9.8.10.1.1.1.4 Variation 4: From Phosphaalkynes and Metal Vapor

9.8.10.1.1.5 Additional Variations

9.8.11 Product Subclass 11: 1,3,2\(\text{L}\)\(\text{L}\)-Diazaphosphetes

9.8.11.1 Synthesis by Ring-Closure Reactions
9.8.11.1 By Formation of Two N–P Bonds .................................................. 167
9.8.11.1.1 Method 1: From 3-Bromo-3-phenyl-3H-diazirine and a Stannylphosphine 167
9.8.12 Product Subclass 12: 1\(\lambda^3,2\lambda^3,3\lambda^3\)-Triphosphetes .......................... 168
9.8.12.1 Synthesis by Ring-Closure Reactions .............................................. 168
9.8.12.1.1 Method 1: From Lithium Bis(diphenylphosphino)(trimethylsilyl)methanide and Phosphorus Trichloride .................................................. 168
9.8.13 Product Subclass 13: 3\(\lambda^3,2\lambda^3,3\lambda^3\)-Triphosphetes .......................... 169
9.8.13.1 Synthesis by Ring Transformation .................................................... 169
9.8.13.1.1 Method 1: From a (\(\eta^4\)-Cyclooctatetraene)(1,4-dihydro-1,2,4-triphosphinine-1,4-diyl)hafnium Complex .............................................. 169
9.8.14 Product Subclass 14: 1\(\lambda^3,2\lambda^3,4\lambda^3\)-Diazadiphosphetes ..................... 170
9.8.14.1 Synthesis by Ring-Closure Reactions .............................................. 171
9.8.14.1.1 Method 1: From Azidobis(diisopropylamino)phosphine .................. 171
9.8.14.1.2 Method 2: From N-[bis(diisopropylamino)phosphino]-C[bis(diisopropylamino)thiophosphoryl]nitrilimine .............................................. 171
9.8.15 Product Subclass 15: 1\(\lambda^3,3\lambda^3,2\lambda^3,4\lambda^3\)-Tetraphosphetes .................. 172
9.8.15.1 Synthesis by Ring-Closure Reactions .............................................. 172
9.8.15.1.1 Method 1: From Cyclic Bis(amino)chlorophosphines .................. 172
9.8.16 Product Subclass 16: 1\(\lambda^3,2\lambda^3,3\lambda^3,4\lambda^3\)-Tetraphosphetes .................. 173
9.8.16.1 Synthesis by Ring-Closure Reactions .............................................. 174
9.8.16.1.1 Method 1: From White Phosphorus in the Coordination Sphere of Transition Metals .................................................. 174

9.9 Product Class 9: Furans

9.9.1 Synthesis by Ring-Closure Reactions .............................................. 187
9.9.1.1 By Formation of One O–C and One C–C Bond .................................. 187
9.9.1.1.1 Fragments O–C–C and C–C .............................................. 187
9.9.1.1.1.1 From \(\alpha\)-Heterofunctionalized Ketones .................................. 187
9.9.1.1.1.1.1 Method 1: Transition-Metal-Catalyzed Reaction of \(\alpha\)-Diazoalkanones with Alkynes .............................................. 187
### 9.9.1.1.1 Method 2: From α-Halo Ketones and 3-Oxoalkanoates (Feist–Benary Reaction)

- From 1,1-Dialkoxy-2-bromoalkanes and Dicarbonyl Compounds or 1-(Trimethylsiloxy)alk-1-enes  

#### 9.9.1.1.2 Method 3: From α-Hydroxy Ketones and Dialkyl But-2-yne-1,4-dioate

#### 9.9.1.1.3 Method 4: From α-Hydroxy Ketones and Dicarbonyl Compounds and Derivatives

#### 9.9.1.1.4 Method 5: From α-Haloalkanones and α-Trimethylstannyl Ketones

#### 9.9.1.1.5 Method 6: From α-Haloalkanones and α-Trimehtylstannanyl Ketones

### 9.9.1.1.2 Method 1: From 1,3-Dicarbonyl Compounds and 3-Bromoalkynes

#### 9.9.1.1.3 Method 2: Palladium-Catalyzed Reaction of Alkyl 3-Oxoalkanoates with 2-(Alk-1-ynyl)oxiranes

#### 9.9.1.1.4 Method 3: Manganese-Mediated Reaction of Alkyl 3-Oxoalkanoates with Enol Ethers

#### 9.9.1.1.5 Method 4: Knoevenagel Condensation of 1,3-Dicarbonyl Compounds and Aldehydes Followed by Bromination and Cyclization

#### 9.9.1.1.6 Method 5: From 1,3-Dicarbonyl Compounds and 1-Nitroalk-1-enes

#### 9.9.1.1.7 Method 6: Palladium-Catalyzed Reaction of 1,3-Dicarbonyl Compounds with Prop-2-ynyl Carbonate

### 9.9.1.1.3 From Functionalized Alkenes and Alkynes with C,C,O Building Blocks

#### 9.9.1.1.3.1 Method 1: From 1-Haloalk-1-enes and Methylene Ketones

#### 9.9.1.1.3.2 Method 2: From Silylallenes and Acid Chlorides

#### 9.9.1.1.3.3 Method 3: From 1-Aminoalk-1-ynes and Sulfonylalk-1-ynes

### 9.9.1.2 Fragments C,C,O

#### 9.9.1.2.1 Method 1: From 3-Bromopropenal Acetals and Alkanals

#### 9.9.1.2.2 Method 2: From Silylallenes and Acid Chlorides

### 9.9.1.3 Fragments O,C

#### 9.9.1.3.1 Method 1: From 1,3-Dicarbonyl Compounds and Sulfonium Ylides

#### 9.9.1.3.2 Method 2: From 1-Aryl-3-chloroalkan-1-ones and Potassium Cyanide

#### 9.9.1.3.3 Method 3: From Selectively Protected 1,3-Dicarbonyl Compounds

#### 9.9.1.3.4 Method 4: 2,3-Disubstituted Furans from 1-(Benzyloxy)-3-tosylalkenes and Aldehydes

### 9.9.1.4 By Formation of Two C,C Bonds

#### 9.9.1.4.1 Method 1: From Dialkyl Oxalate and Bis(alkoxycarbonylmethyl) Ethers

### 9.9.1.5 By Formation of One O,C Bond

#### 9.9.1.5.1 Method 1: From Dialkyl Oxalate and Bis(alkoxycarbonylmethyl) Ethers

### 9.9.1.6 By Cyclization of 1,4-Diheterofunctional C₄ Compounds

#### 9.9.1.6.1 Method 1: Cyclization of 4-Oxobutanamides or 4-Oxobutanenitriles to Furan-2-amines

#### 9.9.1.6.2 Method 2: Cyclization of 4-Hydroxybut-2-enenitriles

#### 9.9.1.6.3 Method 3: Reductive Cyclization of Alkene-1,4-diones and Cyclization of 4-Hydroxyalk-2-en-1-ones
9.9.1.3.1.1.4 Method 4: Cyclization of 4-Diazoalk-2-en-1-ones

9.9.1.3.1.1.5 Method 5: Cyclization of 4,4-Dialkoxyalkan-1-ones

9.9.1.3.1.1.6 Method 6: Cyclization of Alkane-1,4-diones (The Paal–Knorr Synthesis)

9.9.1.3.1.1.7 Method 7: Cyclization of β,γ-Hydroxy Ketone or Their Derivatives

9.9.1.3.1.1.8 Method 8: Cyclization of 1,4-Dihydroxyalk-2-ynes

9.9.1.3.1.1.9 Method 9: Oxidative Cyclization of 1,4-Dihydroxyalk-2-enes

9.9.1.3.1.2 By Cyclization of Monofunctionalized C₄ Compounds

9.9.1.3.1.2.1 Method 1: Palladium-Catalyzed Cyclization of Alk-1(2)-yn-4-ones

9.9.1.3.1.2.2 Method 2: Cyclization of Alka-1,2-dien-4-ones

9.9.1.3.1.2.3 Method 3: Cyclization of β,γ-Substituted β,γ-Unsaturated Ketones with Diphenyl Diselenide

9.9.1.3.1.2.4 Method 4: Cyclization of 5-Hydroxyalk-3-en-1-ynes

9.9.1.3.1.2.5 Method 5: Base-Assisted Cyclization of 1-(4-Hydroxyalk-2-ynyl)benzotriazoles

9.9.1.3.1.2.6 Method 6: Cyclization of Alkynyloxiranes

9.9.1.3.1.2.7 Method 7: Cyclization of 4-Hydroxyalk-1-ynes and Substituted 4-Hydroxyalk-1-enes

9.9.1.3.1.2.8 Method 8: Oxidative Cyclization of Alk-1-en-4-ones

9.9.1.4 By Formation of One C₄C Bond

9.9.1.4.1 Fragment C—O—C—C

9.9.1.4.2 Method 1: McMurry-type Cyclization of 1-Acylxalk-1-en-3-ones via a Radical Mechanism

9.9.2 Synthesis by Ring Transformation

9.9.2.1 Ring Enlargement

9.9.2.2.1 Method 1: Cycloaddition of Alkynes to Furans Followed by Retro-Diels–Alder Reaction

9.9.2.2.2 Method 2: Cycloaddition of Alkynes to Oxazoles Followed by Retro-Diels–Alder Reaction

9.9.2.2.3 Method 3: Cycloaddition of Alkynes to Mesoionic Heterocycles Followed by Retro-Diels–Alder Reaction

9.9.2.2.4 Method 4: Decomposition of 4-(Benzoyloxy)-1,3-dioxolanes

9.9.2.2.5 Method 5: Reduction and Rearrangement of 4,5-Dihydroisoxazoles

9.9.2.3 Ring Contraction

9.9.2.3.1 Method 1: Synthesis from 2H-Pyrones

9.9.2.3.2 Method 2: Synthesis from 2H-Pyrans and Pyrylium Salts

9.9.2.3.3 Method 3: Synthesis from 3,6-Dihydro-1,2-dioxins

9.9.2.3.4 Method 4: Synthesis from Sugar Derivatives

9.9.3 Aromatization

9.9.3.1 Method 1: Reduction and Elimination of Water from Furan-2(5H)-ones
9.9.3.2 Method 2: Oxidation of Dihydro- and Tetrahydrofurans 233

9.9.4 Synthesis by Substituent Modification 234

9.9.4.1 Substitution of Hydrogen 234

9.9.4.1.1 Method 1: Replacement by Deuterium 234
9.9.4.1.2 Method 2: Metalation 235

9.9.4.1.2.1 Variation 1: Replacement of Hydrogen by Lithium 235
9.9.4.1.2.2 Variation 2: Replacement of a Halogen by Lithium 238
9.9.4.1.3 Method 3: Introduction of Formyl Groups 239
9.9.4.1.4 Method 4: Introduction of Acyl Groups 241
9.9.4.1.5 Method 5: Introduction of Chloromethyl and Hydroxymethyl Groups 243
9.9.4.1.6 Method 6: Introduction of Aminoalkyl Groups (Mannich Reaction) 243
9.9.4.1.7 Method 7: Introduction of Allyl Groups 244
9.9.4.1.8 Method 8: Introduction of Alk-1-enyl Groups 245
9.9.4.1.9 Method 9: Introduction of Aryl Groups 246
9.9.4.1.10 Method 10: Introduction of Alkyl Groups by Reaction with Alkyl Halides (Friedel-Crafts Reaction) 248
9.9.4.1.11 Method 11: Introduction of Alkyl Groups by Reaction with α,β-Unsaturated Carbonyl Compounds 249
9.9.4.1.12 Method 12: Introduction of Halogen Substituents 249
9.9.4.1.13 Method 13: Sulfonation 252
9.9.4.1.14 Method 14: Nitration 253

9.9.4.2 Substitution of Metals 254

9.9.4.2.1 Method 1: Replacement of Lithium by Hydrogen or Deuterium 254
9.9.4.2.2 Method 2: Replacement of Lithium by a Silyl Group 254
9.9.4.2.3 Method 3: Replacement of Lithium by a Carboxy Group 255
9.9.4.2.4 Method 4: Replacement of Lithium by an Acyl Group 256
9.9.4.2.5 Method 5: Replacement of Lithium by a Hydroxymethyl Group 256
9.9.4.2.6 Method 6: Replacement of Lithium by an Aryl Group via Intermediate Boronates (Suzuki Coupling) 257
9.9.4.2.7 Method 7: Replacement of Lithium by an Aryl or Alkenyl Group via Intermediate Stannanes (Stille Coupling) 258
9.9.4.2.8 Method 8: Replacement of Lithium by an Acyl Group via Intermediate Furylcopper Compounds (Including Ullmann Coupling) 259
9.9.4.2.9 Method 9: Replacement of Lithium by Aryl, Alkenyl, or Alkynyl Groups via Intermediate Furylzinc Compounds 260
9.9.4.2.10 Method 10: Replacement of Lithium by an Alkyl Group 261
9.9.4.2.11 Method 11: Replacement of Lithium by a Halogen 261
9.9.4.2.12 Method 12: Replacement of Lithium by an Alkylsulfanyl or Arylsulfanyl Group 262

9.9.4.3 Substitution of Carbon Functionalities 263

9.9.4.3.1 Method 1: Decarboxylation of Furoic Acids 263
9.9.4.4 Substitution of Heteroatoms 263

9.9.4.4.1 Method 1: Substitution of a Halogen by Hydrogen 263
9.9.4.4.2 Method 2: Reaction of Halo- or Nitrofurans with Carbon Nucleophiles 264

Science of Synthesis Original Edition Volume 9
© Georg Thieme Verlag KG
9.10.1.1.3.1.1 Variation 1: S-Alkylation of Enolizable β-Thioxo Carbonyl Compounds or β-Thiononitriles ........................................ 301
9.10.1.1.3.1.2 Variation 2: Reaction of β-Oxo Dithioesters and β-Oxothioamides with a 4-Bromobut-2-enoate .......................... 303
9.10.1.1.3.1.3 Variation 3: Reaction of Active Methylene Compounds with Carbon Disulfide Followed by S-Alkylation and Ring Closure .... 304
9.10.1.1.3.1.2 Method 2: Carbene Addition to α-Oxoketene Dithioacetals and α-Oxoketene Monothioacetals ............................ 305
9.10.1.1.3.2 Fragments S—C —C and C—C ............................................... 306
9.10.1.1.3.2.1 Method 1: From α-Sulfanyl Ketones ................................ 306
9.10.1.1.3.2.1.1 Variation 1: Reaction of α-Sulfanyl Ketones with 2-(Diethoxyphosphoryl)-Substituted Alk-2-enoates .................. 306
9.10.1.1.3.2.1.2 Variation 2: From α-Sulfanyl Ketones and Cyanoacetates .......................................................... 307
9.10.1.1.3.2.2 Method 2: Reaction of α-Alkylsulfanyl Ketones with Grignard Reagents ................................................. 308
9.10.1.1.3.2.3 Method 3: From Vinyl Sulfides and Alkynes ............................... 309
9.10.1.1.3.2.4 Method 4: From 1,2,3-Thiadiazoles and Alkynes ...................................................... 310
9.10.1.1.3.3 Fragments S—C —C and C—C ............................................... 311
9.10.1.1.3.3.1 Method 1: Reaction of Dithioesters with Alk-1-yynes .............................................................. 311
9.10.1.1.3.3.2 Method 2: Reaction of Isothiocyanates with Alkyl or Alkynyl Compounds .............................. 312
9.10.1.1.3.3.2.1 Variation 1: Reaction of Isothiocyanates with (Cyanomethyl)ketene Dithioacetals ............................... 312
9.10.1.1.3.3.2.2 Variation 2: Reaction of Isothiocyanates with Alk-1-ynyllithium Compounds .......................... 313
9.10.1.1.3.3.3 Method 3: Reaction of Thioglycolates with β-Electrophilic Carbonyl Compounds or Equivalents .................. 314
9.10.1.1.3.3.1 Variation 1: Reaction of Thioglycolates with β,β-Dihalo or α,α-Dihalo Carbonyl Compounds ............................. 314
9.10.1.1.3.3.2 Variation 2: Reaction of Thioglycolates with β-Chlorovinyl Carbonyl Compounds and Equivalents (The Fiesselmann Synthesis) .... 315
9.10.1.1.3.3.3 Variation 3: Reaction of Thioglycolates with β-Chloro-Substituted Cinnaminitriles .............................. 316
9.10.1.1.3.3.4 Variation 4: Reaction of Thioglycolates with α-Oxoalkynes ............................................................. 317
9.10.1.1.3.3.5 Variation 5: Reaction of Thioglycolates with α-Sulfanyl Ketones with Acetylenic Esters .............................. 318
9.10.1.1.3.3.6 Variation 6: Reaction of Thioglycolic Acid or Esters with β-Oxo Esters ........................................... 320
9.10.1.1.3.3.4 Method 4: Reaction of Benzyl Thiols with Butadiynes .................. 321
9.10.1.1.3.3.5 Method 5: Reaction of Thiocarboxylic Acids with a Cyclopropyl(triphenyl)phosphonium Salt .......................... 322
9.10.1.1.3.3.6 Method 6: Reaction of Dithiocarbonates or Equivalents and Cyclopropenylium Salts ............................. 323
9.10.1.1.4 By Formation of Two C—C Bonds .................................................. 324
9.10.1.1.4.1 Fragments C—S—C —C and C ................................................. 324
9.10.1.1.4.1.1 Method 1: S-Alkylation of Thioamides and Reaction with a Chloromethaniminium Salt ......................... 324
9.10.1.1.4.2 Fragments C—S—C and C—C ................................................. 325
9.10.1.1.4.2.1 Method 1: Reaction of 3-Thia-1,5-dicarbonyl Compounds or Equivalents with 1,2-Dicarbonyl Compounds (The Hinsberg Synthesis) .... 325

9.13.1.5.2 Fragments N—C—C and C—C ........................................................................................................ 469

9.13.1.5.2.1 Method 1: Condensation Reaction of α-Amino Ketones with Methylene-Active Carbonyl Compounds (The Knorr Pyrrole Synthesis) ........................................ 469

9.13.1.5.2.2 Method 2: Condensation Reaction of Enamino Esters with α-Electrophilic Carbonyl Compounds and their Synthetic Equivalents ........................................ 472
9.13.1.5.2.3 Method 3: Reaction of Enamino Esters with α-Diazo Ketones .......................... 474
9.13.1.5.2.4 Method 4: Reaction of Oximes (and Hydrazones) with Alkynes .......................... 474
9.13.1.5.2.5 Method 5: Reaction of Azoketones with Methylene Ketones .............................. 475
9.13.1.5.2.6 Method 6: Combination of α-Amino Carbonyl Compounds and Enolates ........................ via Aldol Reactions .................................................. 476
9.13.1.5.2.7 Method 7: Reaction of α-Metalated Imines with α-Halo Ketones or α-Diketones .......................... 478
9.13.1.5.3 Fragments N—C and C—C—C ........................................................................ 481
9.13.1.5.3.1 Method 1: Reaction of α-Aminocarbonyl or α-Iminoacyl Compounds with 1,3-Diketones or Equivalents ................................................................. 481
9.13.1.5.3.2 Method 2: Reaction of Benzotriazole Enamines with Imines ............................... 486
9.13.1.5.3.3 Method 3: Reaction of Allenes with Tosylimines .................................................. 486
9.13.1.6 By Formation of Two C—C Bonds ........................................................................ 487
9.13.1.6.1 Fragments C—N—C—C and C ........................................................................ 487
9.13.1.6.1.1 Method 1: Reaction of 2-Arylvinyl Isocyanides with Carbon Nucleophiles ............ 487
9.13.1.6.2 Fragments C—N—C—C and C ........................................................................ 488
9.13.1.6.2.1 Method 1: Aldol Reaction of α-Diketones with Bis(acceptor-substituted methyl)amines ........................................................................................................ 488
9.13.1.6.2.2 Method 2: Reaction of α-Amidonitriles with Vinylphosphonium Salts .......... 488
9.13.1.6.2.3 Method 3: Reaction of Isocyanostabilized Acetates, Acetonitriles, or Methylphosphonates with Nitroalkenes ................................................................. 489
9.13.1.6.2.4 Method 4: Reaction of Tosylmethyl Isocyanide with Electrophilic Alkenes ......... 491
9.13.1.6.2.5 Method 5: Reaction of N-(Tosylmethyl)- or N-(Benzotriazolylmethyl)-Substituted Imidothioates with Electrophilic Alkenes ............................. 494
9.13.1.6.2.6 Method 6: Reaction of Azomethine Ylides or Related Systems with Alkynes or Alkenes ................................................................. 495
9.13.1.6.2.7 Method 7: Reaction of Chromium±(Alkylidenamino)carbene Complexes with Alkynes ........................................................................................................ 498
9.13.1.7 By Formation of One N—C Bond ............................................................................ 498
9.13.1.7.1 Fragment N—C—C—C—C .............................................................................. 498
9.13.1.7.1.1 Method 1: Cyclizative Condensations ............................................................ 498
9.13.1.7.1.2 Method 2: Cyclization of Alk-4-yn-1-amine .................................................. 500
9.13.1.7.1.3 Method 3: Cyclization of Dienyl Azides .......................................................... 501
9.13.1.8 By Formation of One C—C Bond ......................................................................... 502
9.13.1.8.1 Fragment C—N—C—C—C .............................................................................. 502
9.13.1.8.2 Fragment C—C—N—C—C .............................................................................. 503
9.13.1.8.2.1 Method 1: Reactions Involving Typical C—C Bond Construction ................. 503
9.13.1.9 Synthesis by Ring Transformation ........................................................................ 504
9.13.1.9.1 By Ring Enlargement ...................................................................................... 504
9.13.1.9.1.2 Method 2: Rearrangement of 2-Vinyl-2H-azirines .......................................... 504
9.13.2.2 By Ring Contraction ................................................................. 505
9.13.2.2.1 Method 1: Rearrangement of Pyridine and 1,3-Oxazepine Derivatives  505
9.13.3 Synthesis by Aromatization ......................................................... 505
9.13.3.1 By Reduction ........................................................................... 506
9.13.3.1.1 Method 1: Reduction–Dehydration of 1H-Pyrrol-2(5H)-ones and 1H-Pyrrol-2(3H)-one ................................................................. 506
9.13.3.2 By Elimination ......................................................................... 506
9.13.3.2.1 Method 1: Elimination from Substituted 3,4-Dihydro-2H-pyrroles ................................................................. 506
9.13.3.3 By Isomerization ....................................................................... 508
9.13.3.3.1 Method 1: Rearrangement of 2H-Pyrroles ................................................................. 508
9.13.3.4 By Dehydrogenation ................................................................. 508
9.13.3.4.1 Method 1: Dehydrogenation of Dihydro- and Tetrahydropyrroles ................................................................. 508
9.13.4 Synthesis by Substituent Modification .............................................. 509
9.13.4.1 Substitution of Existing Substituents ............................................. 509
9.13.4.1.1 Substitution of Hydrogen ......................................................... 509
9.13.4.1.1.1 Method 1: Metalation ................................................................. 509
9.13.4.1.1.2 Method 2: CAcylation ................................................................. 509
9.13.4.1.1.3 Method 3: CAlkylation ................................................................. 513
9.13.4.1.1.3.1 Variation 1: CAlkylation by Typical Electrophiles ................. 513
9.13.4.1.1.3.2 Variation 2: CAlkylation (and Arylation) by Carbenes and Free Radicals ................................................................. 514
9.13.4.1.1.3.3 Variation 3: CAlkylation by Various Electrophiles ............... 516
9.13.4.1.1.4 Method 4: CHalogenation ................................................................. 518
9.13.4.1.1.5 Method 5: CThiolation ................................................................. 520

9.13.4.1.1.7 Method 7: N-Substitution ................................................................. 521
9.13.4.1.2 Substitution of Metals ................................................................. 524
9.13.4.1.2.1 Method 1: Substitution Reactions Involving Mercury and Thallium Derivatives ................................................................. 525
9.13.4.1.2.2 Method 2: Substitution Reactions Involving Organocopper and Organozinc Derivatives ................................................................. 526
9.13.4.1.2.3 Method 3: Substitution Reactions Involving Organopalladium Derivatives ................................................................. 527
9.13.4.1.2.4 Method 4: Substitution Reactions Involving Organolithium Derivatives ................................................................. 530
9.13.4.1.3 Substitution of Carbon Functionalities ........................................ 532
9.13.4.1.3.1 Method 1: Reactions Involving Decarboxylation from a Ring Carbon ................................................................. 532
9.13.4.1.3.2 Method 2: Reactions Involving Dealkylation from the Ring Nitrogen ................................................................. 532
9.13.4.1.3.3 Method 3: Reactions Involving Detritylation from the Ring Nitrogen ................................................................. 533
9.13.4.1.4 Substitution of Heteroatoms ................................................................. 534
9.13.4.1.4.1 Method 1: Replacement of Tosyl by Trialkylstannyl Groups on a Ring Carbon ................................................................. 534
9.13.4.1.4.2 Method 2: Replacement of Sulfur and Silyl Groups on the Ring Nitrogen ................................................................. 534
9.13.4.2 Modification of Substituents ................................................................. 535
4.2.1 Modification of Acyl Substituents

4.2.1.1 Method 1: Reduction of Acyl Groups to Alkyls

4.2.1.2 Method 2: Addition and Condensation Reactions of Acyl Groups

4.2.1.3 Method 3: Rearrangement of Acyl Groups

4.2.2 Modification of Alkyl Substituents

4.2.2.1 Method 1: Substitution Reactions of Mannich Bases

4.2.2.2 Method 2: Alkylation of \( \alpha \)-Methylene Substituents

4.2.2.3 Method 3: Halogenation of \( \alpha \)-Methylene Substituents

4.2.2.4 Method 4: Oxidation of \( \alpha \)-Methylene Substituents

9.14 Product Class 14: Phospholes

F. Mathey

9.14.1 Product Subclass 1: \( \lambda^3 \)-1H-Phospholes

9.14.1.1 Synthesis by Ring-Closure Reactions

9.14.1.1.1 By Formation of Two P—C Bonds and One C—C Bond

9.14.1.1.1.1 Method 1: Reaction of Dihalophosphines with Enamines

9.14.1.1.2 By Formation of Two P—C Bonds

9.14.1.1.2.1 Fragments C—C—C and P

9.14.1.1.2.1.1 Method 1: Reaction of Dilithiophosphines with 1,4-Dihalo-Substituted 1,3-Dienes

9.14.1.1.2.1.2 Method 2: Reaction of Dihalophosphines with 1,4-Dilithio-Substituted 1,3-Dienes

9.14.1.1.2.1.3 Method 3: Reaction of Primary Phosphines with 1,3-Dienes

9.14.1.1.2.1.4 Method 4: Thermal Reaction of Dihalophosphines with 1,3-Dienes

9.14.1.1.2 Synthesis by Ring Transformation

9.14.1.1.2.1 Method 1: Reaction of Dihalophosphines with Metallacyclopentadienes

9.14.1.1.2.2 Method 2: Insertion of Alkynes into Phosphirenes

9.14.1.1.3 Aromatization

9.14.1.1.3.1 Method 1: Dehalogenation of P-Halophosphonium Salts Obtained from Dihalophosphines and Cyclobutadiene-Aluminum Trichloride Complexes

9.14.1.1.3.2 Method 2: Dehydrohalogenation of 1-Halodihydrophosphonium Halides

9.14.1.1.3.2.1 Variation 1: P-Bromination of 2,5-Dihydro-\( \lambda^3 \)-1H-phospholes Followed by Dehydrobromination

9.14.1.1.3.2.2 Variation 2: Quaternization of 1-Bromo-2,5-dihydro-1H-phospholes Followed by Dehydrobromination

9.14.1.1.3.3 Method 3: Dehydrohalogenation of \( \lambda \)-Halophospholane 1-Oxides

9.14.1.1.4 Synthesis by Substituent Modification

9.14.1.1.4.1 Addition Reactions
9.14.1.1 Method 1: Reaction of Electrophiles with Phospholide Ions 569
9.14.1.2 Method 2: α-Functionalization of 1H-Phosphol-2-ylithiums 573
9.14.1.2 Substitution of Existing Substituents 575
9.14.1.2.1 Method 1: Reaction of Nucleophiles with Phospholes 575
9.14.1.2.2 Method 2: Transformation of α-Substituents 576
9.14.1.2.3 Method 3: Reduction of λ3-Phospholes 576
9.14.1.3 Decomplexation and Thermolysis 578
9.14.1.3.1 Method 1: Decomplexation of Phosphole λ3-Complexes 578
9.14.1.3.2 Method 2: Thermolysis of λ3-Phospholes 579
9.14.2 Product Subclass 2: Phospholide Ions 581
9.14.2.1 Aromatization 582
9.14.2.1.1 Method 1: Cleavage of the Exocyclic P–R Bond of λ3-1H-Phospholes 582
9.14.2.1.2 Method 2: Deprotonation of Transient 2H-Phospholes 583
9.14.2.2 Method 2: Transformation of α-Substituents 576
9.14.2.3 Method 3: Reduction of λ3-Phospholes 576
9.14.2.3 Decomplexation and Thermolysis 578
9.14.2.3.1 Method 1: Decomplexation of Phosphole λ3-Complexes 578
9.14.2.3.2 Method 2: Thermolysis of λ3-Phospholes 579
9.14.3 Product Subclass 3: η5-Phospholyl Complexes 585
9.14.3.1 Synthesis by Ring-Closure Reactions 588
9.14.3.1.1 Method 1: Assembly of a Phospholyl Ring 588
9.14.3.2 Synthesis by Complexation 588
9.14.3.2.1 Method 1: From Phospholide Ions 588
9.14.3.2.2 Method 2: From λ3-1H-Phospholes 592
9.14.3.2.3 Method 3: From λ3-2H-Phospholes 593
9.14.3.3 Synthesis by Substituent Modification 594
9.14.3.3.1 Method 1: Electrophilic Substitution 594
9.14.3.3.2 Method 2: Modification of α-Substituents 595
