# Volume 21: Three Carbon–Heteroatom Bonds: Amides and Derivatives; Peptides; Lactams

**Preface** ................................................................. V

**Table of Contents** .................................................. IX

## 21 Introduction

Y. R. Mahajan and S. M. Weinreb ........................................... 1

### 21.1 Product Class 1: Amides

Y. R. Mahajan and S. M. Weinreb ........................................... 17

#### 21.1.1 Synthesis from Carbonic Acid Derivatives

D. Stien .................................................................. 27

#### 21.1.2 Synthesis from Carboxylic Acids and Derivatives

T. Ziegler ................................................................. 43

#### 21.1.3 Synthesis from Aldehydes, Ketones, and Related Compounds

D. J. Austin and S. M. Miller ................................................ 77

#### 21.1.4 Synthesis from Amines

G. R. Cook ............................................................... 111

#### 21.1.5 Synthesis by Rearrangement

W. R. Judd, C. E. Katz, and J. Aubé ........................................ 133

#### 21.1.6 Synthesis with Retention of the Functional Group

W.-R. Li .................................................................. 179

### 21.2 Product Class 2: Triacylamines, Imides (Diacylamines), and Related Compounds

F. A. Luzzio ............................................................... 259

### 21.3 Product Class 3: N-[α-(Heteroatom)alkyl]-Substituted Alkanamides

J. K. Cha .................................................................. 325

### 21.4 Product Class 4: N-Arylalkanamides, Ynamides, Enamides, Dienamides, and Allenamides

### 21.5 Product Class 5: α-Heteroatom-Substituted Alkanamides

M. Pätzler, S. Pritz, and J. Liebscher ........................................ 477

### 21.6 Product Class 6: α,β- Unsaturated Amides: Alk-2-ynamides, Arenecarboxamides, and Alk-2-enamides

M. F. Lipton and M. A. Mauragis ........................................... 537

### 21.7 Product Class 7: β-Heteroatom-Substituted Alkanamides

S. Manyem and M. P. Sibi .................................................. 565
21.8 Product Class 8: \(\alpha\)-Lactams
R. V. Hoffman and V. Cesare .............................................. 591

21.9 Product Class 9: \(\beta\)-Lactams
C. Coates, J. Kabir, and E. Turos ........................................... 609

21.10 Product Class 10: \(\gamma\)-Lactams and Larger Ring Lactams
M. B. Smith ............................................................. 647

21.11 Product Class 11: Peptides
W. D. Lubell, J. W. Blankenship, G. Fridkin, and R. Kaul ............... 713

21.12 Product Class 12: Metal Amides and Imides
T. R. Bailey .............................................................. 811

21.13 Product Class 13: \(N\)-Heteroatom-Substituted Alkanamides
P. R. Blakemore .......................................................... 833

21.14 Product Class 14: Acylphosphorus Compounds
A. Whitehead, S. R. Sieck, S. Mukherjee, and P. R. Hanson .............. 907

Keyword Index ............................................................... 941
Author Index .............................................................. 979
Abbreviations ........................................................... 1031

21.1.6.7 Synthesis from Other Amides by Modification of a Substituent on Nitrogen

21.1.6.7.1 Method 1: Amidoalkylation

21.1.6.7.1.1 Variation 1: Under Lewis Acid Catalysis

21.1.6.7.1.2 Variation 2: By Nucleophilic Attack

21.1.6.7.2 Method 2: Catalytic Asymmetric Allylation

21.1.6.7.3 Method 3: Radical Cyclization or Addition

21.1.6.7.4 Method 4: Oxidation

21.1.6.8 Synthesis from Other Amides by N-Alkylation

21.1.6.8.1 Method 1: Palladium-Catalyzed Alkylation

21.1.6.8.2 Method 2: Rhodium Carbenoid Reactions

21.1.6.8.3 Method 3: Ruthenium-Catalyzed Propargylic Substitution Reactions

21.1.6.8.4 Method 4: Copper(I)-Catalyzed Amidation

21.1.6.8.5 Method 5: Osmium-Catalyzed Asymmetric Aminohydroxylation of Alkenes

21.1.6.8.6 Method 6: Multicomponent Coupling of Aldehydes, Amides, and Dienophiles

21.1.6.9 Synthesis from Other Amides by N-Dealkylation

21.1.6.9.1 Method 1: Reduction by Lithium of Low-Molecular-Weight Amines and Ethane-1,2-diamine

21.1.6.9.2 Method 2: Ruthenium(VIII) Oxidation of Serine/Threonine Peptides

21.1.6.9.3 Method 3: Aza-Claisen Rearrangement

21.1.6.10 Synthesis from Lactams with Ring Opening

21.1.6.10.1 Method 1: Cleavage of the β-Lactam Ring

21.1.6.11 Synthesis from 2-Hydroxyamino Amides, α-Oxo Amides, α-Sulfanyl Amides, and Other Functionalized Amides

21.1.6.11.1 Method 1: Reduction of 2-Hydroxyamino Amides

21.1.6.11.2 Method 2: Reduction of α-Oxo Amides

21.1.6.11.3 Method 3: Desulfurization of α-Sulfanyl Amides

21.1.6.11.4 Method 4: Reduction of α-Functionalized Amides

21.1.6.11.5 Method 5: Free-Radical C-Allylation Reactions

21.1.6.11.6 Method 6: Sequential Elimination–Cyclopropanation Reactions

21.1.6.12 Synthesis from α-Amido Nitriles by Decyanation

21.1.6.12.1 Method 1: Catalytic Reduction of Nitriles

21.1.6.13 Synthesis from Alkynamides and Alkenamides by Reduction

21.1.6.13.1 Method 1: Enantioselective Conjugate Reduction with Semicorrin Cobalt Catalysts

21.1.6.13.2 Method 2: Regioselective Reduction with the Sodium Borohydride/Iodine System

21.1.6.14 Synthesis from Alkynamides and Alkenamides by Addition of Carbon Moieties to Carbon—Carbon Multiple Bonds, Other than 1,4-Addition of Heteroatoms

21.1.6.14.2 Method 2: Lewis Acid Promoted Cyclization
21.1.6.15 Synthesis from Amides by $\alpha$-Alkylation and $\alpha$-Halogenation .......... 243
21.1.6.15.1 Method 1: Asymmetric Alkylation Using Pseudoephedrine as a Chiral
Auxiliary .................................................. 243
21.1.6.15.1.1 Variation 1: By Alkylation with Haloalkanes ............................. 243
21.1.6.15.1.2 Variation 2: By Alkylation with Epoxides and Their Derivatives .......... 244
21.1.6.15.1.3 Variation 3: By Asymmetric Michael Reactions .......................... 246
21.1.6.15.1.4 Variation 4: By Mannich Reaction with Enolizable Imines ............... 247
21.1.6.15.1.5 Variation 5: By Asymmetric Aldol Reactions .......................... 247
21.1.6.15.2 Method 2: Diastereoselective $\alpha$-Iodination Reactions ................. 248

21.2.2.3.1.2 Method 2: Amination and Dehydration of Carboxylic Acids .......... 275
21.2.2.3.1.3 Method 3: Synthesis from Carboxylic Acid Anhydrides ............... 282
21.2.2.3.1.4 Method 4: Synthesis from Activated Esters ........................... 293
21.2.2.3.1.5 Method 5: Rearrangement of Amides and Lactams .................... 294
21.2.2.3.1.6 Method 6: Synthesis from Ketenes ...................................... 296
21.2.2.3.1.7 Method 7: Rearrangement of $\beta$-Oxo Esters .......................... 296
21.2.2.3.1.8 Method 8: Acylation of Amides ......................................... 297
21.2.3.1.9 Method 9: Synthesis from Lactams by Oxidation of \(\alpha\)-Methylene Groups 301
21.2.3.1.10 Method 10: Synthesis from Isoimides by Rearrangement 303
21.2.3.1.11 Method 11: Synthesis from Imides through N-Alkylation or N-Arylation 304
21.2.3.1.12 Method 12: Synthesis from Esters and Amido Esters 313
21.2.3.1.13 Method 13: Carbonylation of Alkynes and Amines 316
21.2.4 Product Subclass 4: Imides (Diacylamines) N-Substituted by Amino or Hydroxy Groups, or by a Halogen 317
21.2.4.1 Synthesis of Product Subclass 4 317
21.2.4.1.1 Method 1: N-Aminated Imides from Anhydrides 317
21.2.4.1.2 Method 2: N-Hydroxylated Imides from Anhydrides 318
21.2.4.1.3 Method 3: N-Acyloxylated Imides from N-Hydroxylated Imides 319
21.2.4.1.4 Method 4: N-Brominated Imides from Imides 320
21.2.4.1.5 Method 5: Hydroxylated Imides by the Rearrangement of Cyclic Nitro Ketones 321
21.3 Product Class 3: \(N\)-[\(\alpha\)-(Heteroatom)alkyl]-Substituted Alkanamides
J. K. Cha
21.3.1 Product Subclass 1: \(N\)-(1-Haloalkyl) Amides and Carbamates 325
21.3.1.1 Synthesis of Product Subclass 1 325
21.3.1.1.1 Method 1: Treatment of \(N\)-(1-Hydroxyalkyl) Amides with Inorganic Halides 325
21.3.1.1.1 Variation 1: Treatment of Amides with Paraformaldehyde 326
21.3.1.1.2 Method 2: Addition of Acid Chlorides to Imines 326
21.3.1.1.3 Method 3: Halogenation of Glycinates 327
21.3.1.2 Applications of Product Subclass 1 in Organic Synthesis 328
21.3.1.2.1 Method 1: Displacement Reactions 328
21.3.1.2.2 Method 2: \(\alpha\)-Amidoalkylation 330
21.3.1.2.3 Method 3: Free-Radical Reactions 331
21.3.2 Product Subclass 2: \(N\)-(1-Alkoxyalkyl) Amides and Carbamates 332
21.3.2.1 Synthesis of Product Subclass 2 332
21.3.2.1.1 Method 1: Addition of Amides to Aldehydes 332
21.3.2.1.1 Variation 1: Addition of N-Silylated Amides to Aldehydes 333
21.3.2.1.2 Variation 2: Cyclization of Amides to Tethered Aldehydes 334
21.3.2.1.3 Variation 3: Condensation of Amino Alcohols and Oxo Acids 335
21.3.2.2 Applications of Product Subclass 2 in Organic Synthesis 336
21.3.2.2.1 Method 1: Hetero [4 + 2] Cycloadditions 336
21.3.2.2.2 Method 2: Partial Reduction of Imides 338
21.3.2.2.1 Variation 1: Diastereoselective Reduction of Imides 341
21.3.2.2.2 Variation 2: Desymmetrization of \(meso\)-Imides 342
21.3.2.2.3 Method 3: Addition of Grignard Reagents to Cyclic Imides 343
21.3.2.2.4 Method 4: Kulinkovich Reactions of Vinyl-Tethered Imides 345
21.3.2.2.5 Method 5: Treatment of Imines with Carboxylic Acid Anhydrides 347
21.3.2.6 Method 6: Reduction of N-Acylimidates ...................................... 347
21.3.2.7 Method 7: Electrochemical Oxidation of Amides and Carbamates .......... 348
21.3.2.7.1 Variation 1: Anodic Oxidation of Carbamates in Acetic Acid ............... 351
21.3.2.7.2 Variation 2: Decarboxylative Oxidation of N-Acylamino Acids .......... 351
21.3.2.7.3 Variation 3: Oxidative Decarboxylation of N-Acylamino Acids by Chemical Methods ................................................................. 352
21.3.2.8 Method 8: Ruthenium-Catalyzed Oxidation of Amides and Carbamates .......... 353
21.3.2.8.1 Variation 1: Decomposition of Diazonium Salts of 1-(2-Aminobenzoyl)azacycloalkanes ................................................................. 354
21.3.2.8.2 Variation 2: Oxidation of Amines by 2-Iodoxybenzoic Acid ............... 355
21.3.2.9 Methods 9: Miscellaneous Procedures ........................................ 355
21.3.2.10 Method 10: Further Applications of Iminium and N-Acyliminium Ions in Total Synthesis ................................................................. 358

21.3.3 Product Subclass 3: N-(1-Amino- or 1-Acyliminoalkyl) Amides and Carbamates ................................................................. 358
21.3.3.1 Synthesis of Product Subclass 3 .................................................... 358
21.3.3.1.1 Method 1: Condensation of Amides and Aldehydes ...................... 358
21.3.3.1.1 Variation 1: Treatment of Acetals with Isocyanates ................... 359
21.3.3.1.2 Variation 2: Condensation of Amides, Formaldehyde, and Amines ...... 360
21.3.3.1.3 Variation 3: Use of Benzotriazole in a Mannich-Type Reaction .......... 360
21.3.3.1.2 Method 2: Curtius Rearrangement ........................................... 361
21.3.3.1.3 Method 3: Treatment of N-(1-Haloalkyl) or N-(1-Acyloxyalkyl) Amides and Carbamates with Amines or Azides ......................... 362
21.3.3.2 Applications of Product Subclass 3 in Organic Synthesis .................... 362
21.3.3.2.1 Method 1: α-Amidoalkylation ................................................ 362
21.3.3.2.2 Method 2: Reductive Cleavage of Reduced Pyridazines ................ 362
21.3.3.2.3 Method 3: α-Azidonation of Amides and Carbamates .................. 363

21.3.4 Product Subclass 4: N-(1-Thioalkyl) Amides and Carbamates ................. 365
21.3.4.1 Synthesis of Product Subclass 4 .................................................... 365
21.3.4.1.1 Method 1: By Displacement Reactions ..................................... 365
21.3.4.1.2 Method 2: Acylation of Thiazolidines .................................... 366
21.3.4.1.3 Method 3: Mannich Condensations Involving Sulfinic Acids .......... 367
21.3.4.1.3 Variation 1: Pummerer Reactions of Amido Sulfoxides ................ 368
21.3.4.2 Applications of Product Subclass 4 in Organic Synthesis .................... 369
21.3.4.2.1 Method 1: Ring Cleavage via N-Acyliminium Ions .................... 369
21.3.4.2.2 Method 2: Generation of α-Acylamino Radicals ....................... 373

21.3.5 Product Subclass 5: N-(1-Phosphoniumalkyl) or N-(1-Phosphonylalkyl) Amides and Carbamates ................................................. 374
21.3.5.1 Synthesis of Product Subclass 5 .................................................... 374
21.3.5.1.1 Method 1: Displacement by Phosphine or Phosphite .................. 374
21.3.5.1.2 Method 2: Acylation of Amino Phosphonic and Phosphinic Acids ....... 375
21.3.5.1.2 Variation 1: Staudinger Reactions of 1-Azidoalkylphosphonates ....... 376
21.3.5.1.3 Method 3: Three-Component Coupling of Carboxyls, Amides, and Phosphorus-Based Nucleophiles ........................................ 376
21.3.5.1.4 Method 4: Curtius Rearrangements of α-Acylazido Phosphonates  

21.3.5.2 Applications of Product Subclass 5 in Organic Synthesis  

21.3.5.2.1 Method 1: Wittig Alkenation  

21.4 Product Class 4: N-Arylalkanamides, Ynamides, Enamides, Dienamides, and Allenamides  

21.4 Product Class 4: N-Arylalkanamides, Ynamides, Enamides, Dienamides, and Allenamides  

21.4.1 Product Subclass 1: N-Arylalkanamides  

21.4.1.1 Synthesis of Product Subclass 1  

21.4.1.1.1 Method 1: Palladium-Catalyzed Intermolecular Coupling of Aryl Halides and Amides  

21.4.1.1.1.1 Variation 1: Palladium(II)-Catalyzed Intermolecular Coupling of Aryl Halides and Lactams  

21.4.1.1.1.2 Variation 2: Palladium(0)-Catalyzed Intermolecular Coupling of Aryl Halides and Carbamates  

21.4.1.1.1.3 Variation 3: Palladium(II)-Catalyzed Intermolecular Coupling of Aryl Halides and Oxazolidinones  

21.4.1.1.1.4 Variation 4: Palladium(0)-Catalyzed Intermolecular Coupling of Aryl Halides and Ureas  

21.4.1.1.1.5 Variation 5: Palladium(II)-Catalyzed Intramolecular Cyclization of Amides  

21.4.1.1.1.6 Variation 6: Palladium(II)-Catalyzed Intramolecular Cyclization of Chiral Amides  

21.4.1.1.2 Method 2: Palladium(0)-Catalyzed Coupling of Epoxides and Isocyanates via a π-Allyl Intermediate  

21.4.1.1.2.1 Variation 1: Palladium(0)-Catalyzed Coupling of Dicarbonates and Isocyanates via a π-Allyl Intermediate  

21.4.1.1.3 Method 3: Copper(I)-Catalyzed Intermolecular Coupling of Aryl Halides and Amides (The Goldberg Reaction)  

21.4.1.1.3.1 Variation 1: Copper(I)-Catalyzed Intermolecular Coupling of Hetaryl Halides with Carbamates  

21.4.1.1.3.2 Variation 2: Copper(I)-Catalyzed Intermolecular Coupling of Aryl Halides and Hydrazides  

21.4.1.1.3.3 Variation 3: Microwave-Enhanced Goldberg Reaction  

21.4.1.1.4 Method 4: Alkylation of N-Aryl Amides with Alkyl Halides  

21.4.1.1.4.1 Variation 1: Generation of Solid-Supported N-Arylalkanamides by Three-Component Coupling of N-Arylamines, Carbon Dioxide, and Merrifield’s Resin  

21.4.1.1.5 Method 5: Oxidation of Thioamides with 3-Chloroperoxybenzoic Acid  

21.4.1.1.5.1 Variation 1: Oxidation of Thioamides with Vinyl \( \lambda^3 \)-Iodanes  

21.4.1.1.6 Method 6: Dicyclohexylcarbodiimide Peptide Coupling  

21.4.1.1.7 Method 7: Solid-Phase Synthesis of Boronic Acids Containing Amide Functionality via Ugi Reactions
21.4.1.8 Method 8: 2-Iodoxybenzoic Acid Mediated Radical Cyclization of N-Arylated Amides and Carbamates ........................ 400
21.4.1.9 Method 9: Intramolecular Epoxide Opening and Oxazolidinone Formation 401
21.4.1.9.1 Variation 1: Intermolecular Epoxide Opening and Oxazolidinone Formation ................................................. 402
21.4.1.10 Method 10: N-Pyridinylation of Amides with Pyridine 1-Oxide 402
21.4.1.11 Method 11: Anionic Additions of Prop-2-yn-1-ols to Isocyanates 403
21.4.1.12 Method 12: Hydrolysis of Imidazolium Chlorides under Basic Conditions 403

21.4.2 Product Subclass 2: Ynamides ........................................... 404
21.4.2.1 Synthesis of Product Subclass 2 .............................................................................................................................. 406
21.4.2.1.1 Method 1: Addition of Amides to Alkynyliodonium Trifluoromethanesulfonates ....................................................... 406
21.4.2.1.1 Variation 1: Ring-Opening of Aziridines with Lithium Alkynes, and Trapping with Alkynyliodonium Trifluoromethanesulfonates 407
21.4.2.1.2 Method 2: Copper(II)-Catalyzed Coupling of Amides and Haloalkynes ......................................................................... 407
21.4.2.1.2.1 Variation 1: Copper(I)-Catalyzed Coupling of Amides and Haloalkynes 408
21.4.2.1.2.2 Variation 2: Stoichiometric Copper(I) Coupling of Amides and Alkynes 409
21.4.2.1.3 Method 3: Base-Induced Isomerization of Prop-2-yn-1-ylated Amides 410
21.4.2.1.4 Method 4: Sonogashira Coupling of Unsubstituted Ynamides ..................................................................................... 410
21.4.2.1.4.1 Variation 1: Negishi Coupling of Unsubstituted Ynamides .......................................................................................... 411
21.4.2.1.5 Method 5: Elimination of Vinyl Chlorides .................................................................................................................. 412
21.4.2.1.5.1 Variation 1: Elimination of Vinyl Bromides .................................................................................................................. 412
21.4.2.1.6 Method 6: Acylation of C-Halogenated Ketenimines ..................................................................................................... 413
21.4.2.1.6.1 Variation 1: Acylation of β-Lithio-β-silyl Ketenimines .............................................................................................. 414
21.4.2.1.7 Method 7: Pyrolysis of Alkynyl Azides .......................................................................................................................... 415

21.4.3 Product Subclass 3: Enamides ........................................... 415
21.4.3.1 Synthesis of Product Subclass 3 .......................................................................................................................................... 416
21.4.3.1.1 Method 1: Copper(I)-Catalyzed Coupling of Amides and Vinyl Iodides with Copper(I) Thiophenecarboxylate ................................................................................................................................. 416
21.4.3.1.1.1 Variation 1: Copper(I)-Catalyzed Coupling of Amides and Vinyl Iodides with Copper(I) Iodide .............................................................................................................................................. 417
21.4.3.1.1.2 Variation 2: Copper(I)-Catalyzed Coupling of Amides and Vinyl Iodides with (Acetonitrile)copper(1+)Phosphorus Hexafluoride(1-)/Rubidium Carbonate ......................................................................................... 417
21.4.3.1.2 Method 2: Palladium(II)-Catalyzed Amidation of Alkenes .............................................................................................. 418
21.4.3.1.2.1 Variation 1: Palladium(0)-Catalyzed Amidation of Enol Trifluoromethanesulfonates and 4-Toluenesulfonates 419
21.4.3.1.2.2 Variation 2: Palladium(II)-Catalyzed Amidation of Enol Ethers 420
21.4.3.1.2.3 Variation 3: Palladium(II)-Catalyzed N,O-Acetal Formation and Isomerization 420
21.4.3.1.3 Method 3: Titanium(II)-Mediated Coupling of Ynamides and Aldehydes ........................................................................ 421
21.4.3.1.3.1 Variation 1: Ruthenium(II)-Mediated Coupling of Alkynes and N-Allylated Amides ......................................................................................................................................................... 421
21.4.3.1.3.2 Variation 2: Chromium(0)-Mediated Coupling of Amino Alcohols and Chromium Carbene Complexes 422
21.4.3.1.4 Method 4: Base-Promoted Elimination of Substituted Alcohols 423
21.4.3.1.4.1 Variation 1: Thermal Elimination of Sulfoxides ................................................. 423
21.4.3.1.4.2 Variation 2: Base-Promoted Elimination of Sulfones ........................................ 424
21.4.3.1.4.3 Variation 3: Thermal Elimination of Hydrogen Chloride and Carbon Dioxide .......... 425
21.4.3.1.4.4 Variation 4: Thermal Elimination of Amides .................................................... 425
21.4.3.1.4.5 Variation 5: Oxidative Elimination of Selenides ................................................ 425
21.4.3.1.4.6 Variation 6: Base-Promoted Elimination of a Benzylic Proton ............................. 426
21.4.3.1.5 Method 5: Acylation of Imines .............................................................................. 426
21.4.3.1.5.1 Variation 1: Reductive Acylation of Nitroalkenes .................................................. 427
21.4.3.1.5.2 Variation 2: Reductive Acylation of Oximes .......................................................... 428
21.4.3.1.5.3 Variation 3: Acylation of Enamines with Acid Chlorides ....................................... 428
21.4.3.1.5.4 Variation 4: Thermal Elimination of Amides ....................................................... 428
21.4.3.1.6 Method 6: Alkenation Using Horner–Wadsworth–Emmons Conditions ................. 429
21.4.3.1.6.1 Variation 1: Alkenation Using Wittig Conditions .................................................. 429
21.4.3.1.6.2 Variation 2: Alkenation Using Thio-Wittig Conditions ......................................... 430
21.4.3.1.6.3 Variation 3: Alkenation Using Aza-Wittig Conditions ........................................... 430
21.4.3.1.6.4 Variation 4: Alkenation Using Peterson Conditions ............................................. 431
21.4.3.1.6.5 Variation 5: Alkenation Using Tebbe Conditions .................................................. 431
21.4.3.1.6.6 Variation 6: Alkenation by Ring-Closing Metathesis ............................................ 432
21.4.3.1.6.7 Variation 7: Alkenation by Dithiocarboxylation .................................................... 432
21.4.3.1.6.8 Variation 8: Tungsten(0)-Mediated Coupling of Thiocarbonyl and Thioacetal Groups ............................................................ 433
21.4.3.1.6.9 Variation 9: Schöllkopf Formylamino-Methylenation ........................................... 433
21.4.3.1.7 Method 7: Tributyltin Hydride Mediated Radical Cyclization of Enamides .............. 434
21.4.3.1.7.1 Variation 1: Palladium(0)-Catalyzed Cyclization of Amides Bearing a But-3-yn-1-yl Side Chain .............................................................................................................. 435
21.4.3.1.7.2 Variation 2: Rhodium(I)-Catalyzed Cyclization of Ene-Allenes .............................. 435
21.4.3.1.7.3 Variation 3: Copper(I)-Catalyzed Cyclization of Prop-2-ynyl Carbamates ............. 436
21.4.3.1.8 Method 8: Hetero [4 + 2] Cycloaddition ................................................................. 436
21.4.3.1.8.1 Variation 1: [3 + 2] Cycloaddition and Rearrangement ............................................ 437
21.4.3.1.8.2 Variation 2: Aza-Annulation of Enaminones with Itaconic Anhydride ...................... 438
21.4.3.1.9 Method 9: Isomerization of N-Allyl Amides with Pentacarbonyliron .......................... 438
21.4.3.1.9.1 Variation 1: Isomerization of N-Allyl Amides with Carbonyl(hydrido)tris(triphenylphosphine)ruthenium(II) .............................................................. 439
21.4.3.1.9.2 Variation 2: Isomerization of N-Allyl Amides with Dichlorobis(cyclooctadiene)diiridium(I) .............................................................. 440
21.4.3.1.9.3 Variation 3: Isomerization of N-Allyl Amides with Hydridotetrakis(triphenylphosphine)rhodium .............................................................. 440
21.4.3.1.10 Method 10: Dyotropic Rearrangement ................................................................. 441
21.4.3.1.10.1 Variation 1: 1,2-Thio-Wittig-Type Rearrangement Reactions ................................ 441
21.4.3.1.10.2 Variation 2: Beckmann Rearrangement and α-Formylation ................................ 442
21.4.3.1.10.3 Variation 3: Imine/Enamide Rearrangement ....................................................... 442
21.4.3.1.11 Method 11: Condensation of Amides and Aldehydes ............................................ 443
21.4.3.1.11.1 Variation 1: Amide Addition to Acetals ............................................................... 444
21.4.3.1.12 Method 12: Addition of Alcohols to Isocyanates .................................................... 444
21.4.3.1.12.1 Variation 1: Addition of Vinyl Anions to Isocyanates ........................................... 445
21.4.3.1.12.2 Variation 2: Addition of Alkyl Anions to Isocyanates ........................................... 446
21.4.3.1.13 Method 13: Hydrohalogenation of Ynamides ....................................................... 446
21.4.3.1.13.1 Variation 1: Hydrostannylation of Ynamides ....................................................... 447
21.4.3.1.13.2 Variation 2: Hydroboration/Suzuki–Miyaura Cross-Coupling of Ynamides ......... 447
21.4.3.13.3 Variation 3: Pauson–Khand Reactions of Ynamides ........................................ 448
21.4.3.14 Method 14: Oxazole Ring Opening with Amines ........................................... 448
21.4.3.14.1 Variation 1: Methanolysis of a 4-Methyleneoxazol-5(4H)-one under 
Acid or Base Catalysis .............................................. 449
21.4.3.14.2 Variation 2: Ring Opening of a 4-Methyleneoxazol-5(4H)-one by an 
Alcohol/Lewis Acid ..................................................... 450
21.4.3.15 Method 15: Condensation of α-Acetamidobutenyl Boronates and 
Aldehydes .............................................................. 450
21.4.3.16 Method 16: 1,4-Addition of Allyl Anions to Furanones ...................................... 451
21.4.3.17 Method 17: Addition of Nitriles to Geminal Haloacylated Compounds ............... 452
21.4.3.18 Method 18: Amide Additions to Alkynes ....................................................... 452
21.4.3.19 Method 19: Enol Ether Formation ................................................................. 453

21.4.4 Product Subclass 4: Dienamides .......................................................... 453

21.4.4.1 Synthesis of Product Subclass 4 ................................................................. 454
21.4.4.1.1 Method 1: Condensation of Amides and Aldehydes .................................... 455
21.4.4.1.1 Variation 1: Addition of Amides to Allyl Bromide and Elimination of 
1H-Benzotriazole ............................................................ 455
21.4.4.1.2 Method 2: Acylation of Eneimines with Acid Chlorides .............................. 456
21.4.4.1.3 Method 3: From Vinylogous Amides by O-Silylation ................................. 456
21.4.4.1.4 Method 4: Thermal Rearrangement of Pent-2-yn-1-yl 2,2,2-
Trichloroethanimidoates .............................................. 457
21.4.4.1.4.1 Variation 1: Thermal Rearrangement of Acyl Azides 
(A Modified Curtius Rearrangement) ...................................... 457
21.4.4.1.5 Method 5: Palladium(0)-Catalyzed Elimination of Allyl Acetate ......... 458
21.4.4.1.6 Method 6: Ring-Closing Metathesis of Eneynamides ......................... 459
21.4.4.1.7 Method 7: Titanium(II)-Mediated Coupling of Ynamides and Alkynes .......... 460
21.4.4.1.7.1 Variation 1: Chromium(0)-Mediated Coupling of Amino Alcohols and 
Chromium Carbene Complexes ........................................... 460
21.4.4.1.8 Method 8: Alkenation Using Wittig Conditions ......................................... 461

21.4.5 Product Subclass 5: Allenamides ......................................................... 462

21.4.5.1 Synthesis of Product Subclass 5 ................................................................. 463
21.4.5.1.1 Method 1: Base-Induced Isomerization of Cyclic Amides .......................... 463
21.4.5.1.1 Variation 1: Base-Induced Isomerization/Addition to Aldehydes ............... 463
21.4.5.1.2 Method 2: Base-Induced Isomerization of Acyclic Amides ..................... 464
21.4.5.1.3 Method 3: Elimination of Vinyl Trifluoromethanesulfonates ...................... 465
21.4.5.1.4 Method 4: Palladium(0)-Catalyzed Cyclizations of Yne-Bis(carbonates) .. 466
21.4.5.1.5 Method 5: By a [3,3]-Sigmatropic Rearrangement of a Propynyl Imidate 467
21.4.5.1.5.1 Variation 1: [2,3]-Sigmatropic Rearrangement ........................................ 468
21.4.5.1.6 Method 6: Copper(I)-Catalyzed Amide Additions to Alkynes .................. 468
21.4.5.1.7 Method 7: Alkenation of Ketenes Using Wittig Conditions ...................... 468
21.4.5.1.8 Method 8: By the [2+2] Dimerization of a Ketene and the Subsequent 
Elimination of Carbon Dioxide ........................................ 469
21.5 Product Class 5: \(\alpha\)-Heteroatom-Substituted Alkanamides
M. Pätzel, S. Pritz, and J. Liebscher

21.5.1 Product Subclass 1: Alkanamides with One (or More) Group 17 Element in the \(\alpha\)-Position

21.5.1.1 Method 1: Substitution of One (or More) \(\alpha\)-Hydrogen Atom

21.5.1.1.1 Variation 1: Substitution by Fluorine Atoms

21.5.1.1.2 Variation 2: Substitution by Chlorine Atoms

21.5.1.1.3 Variation 3: Substitution by Bromine Atoms

21.5.1.1.4 Variation 4: Substitution by Iodine Atoms

21.5.1.2 Method 2: Substitution of Heteroatoms

21.5.1.2.1 Variation 1: Substitution by Fluorine Atoms

21.5.1.2.2 Variation 2: Substitution by Chlorine Atoms

21.5.1.2.3 Variation 3: Substitution by Bromine Atoms

21.5.1.2.4 Variation 4: Substitution by Iodine Atoms

21.5.1.3 Method 3: C—C Bond Formation between the Carbonyl Group and the \(\alpha\)-Carbon Atom

21.5.1.4 Method 4: Addition of Halogen Atoms to \(\alpha,\beta\)-Unsaturated Amides

21.5.1.5 Method 5: Addition to \(\alpha,\beta\)-Unsaturated \(\alpha\)-Halo Amides

21.5.1.6 Method 6: C—C Chain Elongation at the \(\alpha\)-Carbon Atom

21.5.2 Product Subclass 2: Alkanamides with One (or More) Group 16 Element in the \(\alpha\)-Position

21.5.2.1 Method 1: Substitution of One (or More) \(\alpha\)-Hydrogen Atom

21.5.2.1.1 Variation 1: Substitution by Oxygen Atoms

21.5.2.1.2 Variation 2: Substitution by Sulfur, Selenium, or Tellurium Atoms

21.5.2.1.3 Variation 3: Oxidation of \(\alpha\)-Hydroxy and \(\alpha\)-Sulfanyl Amides to \(\alpha\)-Oxo and \(\alpha\)-Thiaoxy Amides

21.5.2.2 Method 2: Substitution of Heteroatoms

21.5.2.2.1 Variation 1: Substitution by Oxygen Atoms

21.5.2.2.2 Variation 2: Substitution by Sulfur Atoms

21.5.2.2.3 Variation 3: Substitution by Selenium or Tellurium Atoms

21.5.2.3 Method 3: C—C Bond Formation between the Carbonyl Group and the \(\alpha\)-Carbon Atom

21.5.2.4 Method 4: Addition of a Heteroatom Functionality to \(\alpha,\beta\)-Unsaturated Amides

21.5.2.5 Method 5: Oxidation with C—C Bond Cleavage

21.5.2.6 Method 6: Reduction of \(\alpha\)-Oxo Amides

21.5.2.7 Method 7: C—C Chain Elongation at the \(\alpha\)-Carbon Atom

21.5.2.8 Methods 8: Miscellaneous Procedures

21.5.3 Product Subclass 3: Alkanamides with One (or More) Group 15 Element in the \(\alpha\)-Position

21.5.3.1 Synthesis of Product Subclass 3
### 21.5.3.1 Method 1: Substitution of One (or More) $\alpha$-Hydrogen Atom
- **Variation 1:** Substitution by Nitrogen Atoms ........................................ 506
- **Variation 2:** Substitution by Phosphorus Atoms ..................................... 509
- **Variation 3:** Transformation of $\alpha$-Amino Amides into $\alpha$-Imino Amides and $\alpha$-Diazo Amides ......................................................... 509

### 21.5.3.2 Method 2: Substitution of Heteroatoms
- **Variation 1:** Substitution of Sulfur Atoms by Nitrogen Atoms ................. 510
- **Variation 2:** Substitution of Oxygen or Nitrogen Atoms by Nitrogen Atoms 510
- **Variation 3:** Substitution of Halogen Atoms by Nitrogen Atoms .............. 512
- **Variation 4:** Substitution by Phosphorus Atoms ................................... 515

### 21.5.3.3 Method 3: C—C Bond Formation between the Carbonyl Group and the $\alpha$-Carbon Atom ........................................... 516

### 21.5.3.4 Method 4: Addition of a Nitrogen Functionality to $\alpha,\beta$-Unsaturated Amides ................................................................. 518

### 21.5.3.5 Method 5: Addition to $\alpha,\beta$-Unsaturated $\alpha$-Amino Amides .......... 519

### 21.5.3.6 Method 6: Addition to $\alpha$-Imino Amides .................................. 520

### 21.5.3.7 Method 7: C—C Chain Elongation at the $\alpha$-Carbon Atom .......... 521

### 21.5.3.8 Method 8: Miscellaneous Procedures ........................................ 524

### 21.6 Product Class 6: $\alpha,\beta$-Unsaturated Amides: Alk-2-ynamides, Arenecarboxamides, and Alk-2-enamides

#### M. F. Lipton and M. A. Mauragis

#### 21.6.1 Synthesis of Product Class 6 .......................................................... 537

#### 21.6.2 Method 1: Coupling of Activated Acyl Units and Amines ............. 537

#### 21.6.3 Method 2: Connective Alkene Formation by Wittig Reaction ........ 540

#### 21.6.4 Method 3: Elimination Reactions ................................................ 543

#### 21.6.5 Method 4: Hydrolysis of Nitriles ............................................... 547

#### 21.6.6 Method 5: Transition-Metal-Catalyzed Couplings ...................... 548

#### 21.6.7 Method 6: Reduction of Aroyl Azides ......................................... 553

#### 21.6.8 Method 7: Direct Amine Oxidations .......................................... 554

#### 21.6.9 Method 8: Stereoselective Isomerization of 2-Ynoic Amides .......... 555

#### 21.6.10 Method 9: Electrophilic Substitution ...................................... 557

#### 21.6.11 Method 10: Additional Methods .............................................. 560

### 21.7 Product Class 7: $\beta$-Heteroatom-Substituted Alkanamides

#### S. Manyem and M. P. Sibi

#### 21.7.1 Product Subclass 1: $\beta$-Halogen-Substituted Alkanamides .... 565

#### 21.7.1.1 Synthesis of Product Subclass 1 ............................................ 565

#### 21.7.1.2 Method 1: Addition of Chloride to Alkenimides ..................... 565
21.7.2 Product Subclass 2: β-Oxygen-Substituted Alkanamides ............................................ 566
   21.7.2.1 Synthesis of Product Subclass 2 ......................................................... 566
   21.7.2.1.1 Method 1: Diastereoselective Ene Reaction ................................... 566
   21.7.2.1.2 Method 2: Intramolecular Conjugate Addition ............................... 567
   21.7.2.1.3 Method 3: Tandem Acetalization–Conjugate Addition ....................... 568

21.7.3 Product Subclass 3: β-Sulfur-Substituted Alkanamides ............................................. 568
   21.7.3.1 Synthesis of Product Subclass 3 ......................................................... 569
   21.7.3.1.1 Method 1: Addition of Metal Thiolates ........................................ 569
   21.7.3.1.1.1 Variation 1: Addition of Aluminum Thiolates and Intramolecular Trapping with a Carbonyl Group .................................................. 570
   21.7.3.1.2 Variation 2: Addition of a Thiolate Derived from an Odorless Thiol .... 571
   21.7.3.1.2 Method 2: Addition of Sulfur Nucleophiles Derived from Thioesters or Silyl Thioethers ................................................................. 571
   21.7.3.1.3 Method 3: Stereoselective Addition of Thiols .................................. 572
   21.7.3.1.4 Method 4: Intramolecular Transfer of Sulfur from a Thiocarbonyl Group 574

21.7.4 Product Subclass 4: β-Selenium-Substituted Alkanamides ......................................... 575
   21.7.4.1 Synthesis of Product Subclass 4 ......................................................... 576
   21.7.4.1.1 Method 1: Addition of Lithium Selenolates .................................. 576

21.7.5 Product Subclass 5: β-Nitrogen-Substituted Alkanamides .......................................... 576
   21.7.5.1 Synthesis of Product Subclass 5 ......................................................... 576
   21.7.5.1.1 Method 1: Addition of Phthalimide Salts to Alkenimides .................. 576
   21.7.5.1.2 Method 2: Addition of Hydroxylamines to Alkenamides ................. 577
   21.7.5.1.3 Method 3: Chiral Lewis Acid Catalyzed Addition of Hydrazoic Acid to Alkenimides ................................................................. 579
   21.7.5.1.3.1 Variation 1: Enantioselective Addition of Azidotrimethylsilane to Alkenimides Using a Peptide Catalyst ................................. 580
   21.7.5.1.3.2 Variation 2: Addition of Azide to Alkenimides Followed by Intramolecular Cycloaddition ................................................................. 580
   21.7.5.1.4 Method 4: Addition of Carbamates to Alkenamides ....................... 581
   21.7.5.1.5 Method 5: Addition of Lithium Amides ........................................... 581
   21.7.5.1.6 Method 6: Addition of Amino Esters to Alkenamides ...................... 582
   21.7.5.1.6.1 Variation 1: Enantioselective Addition of Amines Using Dibenzo(furan-4,6-diyl-2,2’-bis(4-phenyl-4,5-dihydrooxazole)–Nickel Catalyst ...... 583
   21.7.5.1.6.2 Variation 2: Aminohydroxylation Using a Solid-Supported Catalyst 584
   21.7.5.1.7 Method 7: Diels–Alder Reaction of Buta-1,3-dien-1-amines with Alkenimides ................................................................. 585

21.7.6 Product Subclass 6: β-Phosphorus-Substituted Alkanamides ...................................... 585
   21.7.6.1 Synthesis of Product Subclass 6 ......................................................... 585
   21.7.6.1.1 Method 1: Addition of Secondary Phosphines ................................. 585
   21.7.6.1.2 Method 2: Addition of Phosphinates ............................................. 586
   21.7.6.1.3 Method 3: Diastereoselective Addition of a Phosphite ..................... 587
21.8 **Product Class 8: α-Lactams**
R. V. Hoffman and V. Cesare

21.8.1 Synthesis of Product Class 8 .................................................. 591
21.8.1.1 Method 1: Dehydrohalogenation of α-Halo Amides .................. 593
21.8.1.2 Variation 1: Using the tert-Butoxide Ion ................................ 594
21.8.1.2 Variation 2: Using Potassium Hydroxide and 18-Crown-6 ........... 595
21.8.1.3 Variation 3: Using Sodium Hydride and 15-Crown-5 ................ 596
21.8.1.2 Method 2: Cycloelimination of N-Sulfonyloxy Amides ............... 597
21.8.1.2.1 Variation 1: Using Amines as Bases .................................. 597
21.8.1.2.2 Variation 2: Using Sodium Hydride as Base ......................... 599
21.8.2 Applications of Product Class 8 in Organic Synthesis .................. 600
21.8.2.1 Method 1: Incorporation of Nucleophiles .............................. 600
21.8.2.1.1 Variation 1: Synthesis of N-Aminohydantoins ...................... 604
21.8.2.1.2 Variation 2: Synthesis of 1,2,4-Triazine-3,6-diones ......... 604
21.8.2.2 Method 2: Cycloaddition Reactions Involving α-Lactams ........... 605

21.9 **Product Class 9: β-Lactams**
C. Coates, J. Kabir, and E. Turos

21.9.1 Synthesis of Product Class 9 .................................................. 609
21.9.1.1 Method 1: Ketene–Imine Cycloadditions .............................. 609
21.9.1.2 Variation 1: Using Acid Chlorides ....................................... 612
21.9.1.3 Variation 2: Using Carboxylic Acids or Their Salts .................. 612
21.9.1.4 Variation 3: Using Amides via an Azetidin-2-ylideneammonium Salt .......................... 614
21.9.1.2.1 Variation 4: By Decomposition of α-Diazoketones ........... 615
21.9.1.2.2 Method 2: Ester Enolate–Imine Cyclocondensations ............ 616
21.9.1.2.2.1 Variation 1: From γ-Lactones ..................................... 617
21.9.1.2.2.2 Variation 2: From 2-Pyridyl Thioesters .......................... 618
21.9.1.2.2.3 Variation 3: From 1,3-Dioxolan-4-ones ......................... 619
21.9.1.2.2.4 Variation 4: From Ethyl Bromodifluoroacetate .................. 619
21.9.1.2.5 Variation 5: From Lithium Ynolates ................................. 620
21.9.1.3 Method 3: Cyclocondensation of β-Amino Acid Derivatives ........ 621
21.9.1.3.1 Variation 1: Via Ugi Three-Component Reaction ............... 623
21.9.1.3.2 Variation 2: From β-Lactones ....................................... 623
21.9.1.4 Method 4: Ring Closure of 2-Aza-1,3-dienes ....................... 624
21.9.1.5 Method 5: Alkene–Isocyanate Cycloadditions ....................... 625
21.9.1.6 Method 6: Nitrone Cycloadditions Employing Alkynes ............. 626
21.9.1.7 Method 7: Ring Closures by Nucleophilic S$_{N}$2 Displacement .... 627
21.9.1.7.1 Variation 1: Mitsunobu Reactions of β-Hydroxy Hydroxamates 629
21.9.1.8 Method 8: Radical Ring Closures ...................................... 630
21.9.1.9 Method 9: Photochemical Ring Contractions ........................ 631
21.9.1.9.1 Variation 1: Photochemical Processes in the Solid State ....... 633
21.9.1.10 Method 10: Ring Contraction of Isoxazolidines (Non-Photochemical Processes) ................................................ 634

21.9.1.11 Method 11: Ring Expansion of Cyclopropanones ................................................................. 635

21.9.1.12 Method 12: Transition-Metal-Catalyzed Processes ................................................................. 636

21.9.1.12.1 Variation 1: Carbonylation of Aziridines ............................................................................. 637

21.9.1.12.2 Variation 2: Use of Organoiron–Alkene Complexes ......................................................... 638

21.9.1.12.3 Variation 3: Additions of Fischer Carbenes to Imines ....................................................... 639

21.9.1.12.4 Variation 4: Rhodium-Catalyzed C—H Bond Insertion .................................................. 640

21.9.1.12.5 Variation 5: Reductive Coupling of Imines with Acrylates ............................................. 641

21.9.1.13 Method 13: 1,4-Addition of Amines to 3-Phenylpropenoyl Chloride ................................ 642

21.10 Product Class 10: γ-Lactams and Larger Ring Lactams

M. B. Smith

21.10 Product Class 10: γ-Lactams and Larger Ring Lactams ................................. 647

21.10.1 Product Subclass 1: Saturated Lactams ................................................................. 647

21.10.1.1 Synthesis of Product Subclass 1 .................................................................................. 647

21.10.1.1.1 Synthesis by Ring-Closure Reactions ........................................................................ 647

21.10.1.1.1 Method 1: Direct Cyclization of Amino Acids ......................................................... 647

21.10.1.1.1.1 Variation 1: By Heating an Amino Acid on Alumina or Silica Gel ......................... 648

21.10.1.1.1.2 Variation 2: By Heating with Titanium(IV) Isopropoxide ........................................ 649

21.10.1.1.1.3 Variation 3: By Dibutyltin Oxide Cyclization of Amino Acids ............................... 649

21.10.1.1.1.2 Method 2: Alkoxy and Alkylsulfanyl Lactams by Cyclization of Functionalized Amino Acids ........................................ 650

21.10.1.1.1.3 Method 3: Direct Cyclization of Amino Esters ...................................................... 650

21.10.1.1.1.4 Method 4: Formation of an α-Alkoxy Lactam by Cyclization of an Alkoxy Amino Ester ........................................................................................................... 652

21.10.1.1.1.5 Method 5: Cyclization of Amino Esters via Cyano Esters ........................................ 653

21.10.1.1.1.5.1 Variation 1: Nitrile Surrogates by Nitrile–Enolate Alkylation ............................. 654

21.10.1.1.1.5.2 Variation 2: 1,4-Addition to Conjugated Nitriles ................................................ 655

21.10.1.1.1.5.3 Variation 3: Enolate Alkylation of α-Halo Nitriles ................................................ 656

21.10.1.1.1.6 Method 6: Cyclization of Amino Esters via Azido Esters .................................... 657

21.10.1.1.1.7 Method 7: Cyclization of Amino Esters via Nitro Esters ....................................... 658

21.10.1.1.1.7.1 Variation 1: By Conjugate Addition of Nitro Enolates to Conjugated Esters .......................................................... 658

21.10.1.1.1.7.2 Variation 2: By Conjugate Addition of Enolate Anions to Nitroalkenes .......... 659

21.10.1.1.1.7.3 Variation 3: By Lewis Acid Catalyzed Addition of Silyl Ketene Acetals to Nitroalkenes .................................................................................................................. 660

21.10.1.1.1.8 Method 8: Oxo Lactams by Cyclization with Oxalates ............................................ 661

21.10.1.1.1.9 Method 9: Oxo Lactams by Cyclization of Amido Diesters .................................... 662

21.10.1.1.1.10 Method 10: Cyclization of Functionalized Acid Derivatives ............................. 662

21.10.1.1.1.10.1 Variation 1: Reduction of Nitro Nitriles .............................................................. 663

21.10.1.1.1.10.2 Variation 2: 1-Aryl Lactams by Cyclization of Aromatic Amides .................. 664

21.10.1.1.1.11 Method 11: Iodolactamization ................................................................................. 664

21.10.1.1.1.12 Method 12: Radical Cyclization .............................................................................. 665

21.10.1.1.1.12.1 Variation 1: Tin Hydride Mediated Radical Cyclization of N-Monosubstituted Amides ...................................................................................................................... 665
21.10.1.1.12.2 Variation 2: Radical Cyclization of Unsymmetrical Dienes Containing an Amide Unit ............................................. 666
21.10.1.1.12.3 Variation 3: Borane-Mediated Radical Cyclization ................................. 667
21.10.1.1.12.4 Variation 4: Cyclization of Amidyl Radicals ........................................... 667
21.10.1.1.12.5 Variation 5: Metal-Mediated Radical Cyclization Reactions ........................ 668
21.10.1.1.12.6 Variation 6: Photocyclization .............................................................. 669
21.10.1.1.13 Method 13: Metal-Catalyzed Cyclization ................................................. 669
21.10.1.1.14 Method 14: \([3+2]\) Annulation .............................................................. 670
21.10.1.1.13 Method 13: Metal-Catalyzed Cyclization ................................................. 669
21.10.1.1.14 Method 14: \([3+2]\) Annulation .............................................................. 670
21.10.1.1.2 Synthesis by Ring Transformation .......................................................... 671
21.10.1.1.2.1 Method 1: Beckmann Rearrangement ...................................................... 671
21.10.1.1.2.1.1 Variation 1: From Ketoxime O-Sulfonic Acids ....................................... 672
21.10.1.1.2.1.2 Variation 2: Reaction with Ketoxime O-Carbonates ............................... 673
21.10.1.1.2.1.2 Method 2: Schmidt Reaction ............................................................ 674
21.10.1.1.2.1.2.1 Variation 1: By Reaction of Cyclic Ketones with Metal Azides and Acids .... 675
21.10.1.1.2.1.2.2 Variation 2: By Reaction with Alkyl Azides and Acids .......................... 676
21.10.1.1.2.1.2.3 Variation 3: By Photocyclization of Siloxy Azides ............................... 676
21.10.1.1.2.1.4 Method 4: Carboxylation of Cyclic Amines .......................................... 677
21.10.1.1.2.1.4.1 Method 5: Condensation of \(\beta\)-Lactones and Imines ............................ 678
21.10.1.1.2.1.4.2 Method 6: Aza-Claisen Ring Expansion ............................................. 679
21.10.1.1.2.2 Formal Exchange of Ring Members with Retention of the Ring Size .......... 679
21.10.1.1.2.2.1 Method 1: Conversion of Lactones into Lactams by Reaction with Amines ............................... 679
21.10.1.1.2.2.2 Method 2: Reduction or Selective Alkylation of Imides ........................... 680
21.10.1.1.2.2.2.1 Variation 1: Reduction of Cyclic Imides ............................................. 681
21.10.1.1.2.2.2.2 Variation 2: Reaction of Imides with Grignard Reagents ......................... 681
21.10.1.1.2.2.2.3 Variation 3: 5-Hydroxy Lactams by Reduction of Imides .......................... 682
21.10.1.1.2.2.2.4 Variation 4: 5-Alkyl-5-hydroxy Lactams .......................................... 683
21.10.1.1.2.2.3 Method 3: \(N\)-Amino-Substituted Lactams ............................................. 683
21.10.1.1.2.2.3 Oxidation of Cyclic Amines .............................................................. 684
21.10.1.1.2.2.3.1 Method 1: Direct Oxidation of Cyclic Amines by Ruthenium(IV) Oxide ... 684
21.10.1.1.2.2.3.2 Method 2: Sequential Hydroxylation and Oxidation of Cyclic Amines .... 684
21.10.1.1.3 Synthesis by Substituent Modification ....................................................... 685
21.10.1.1.3.1 Substitution of Existing Substituents ..................................................... 685
21.10.1.1.3.1.1 Method 1: Direct N-Acylation ............................................................ 685
21.10.1.1.3.1.2 Method 2: \(N\)-Carbamate Protection of Lactams ..................................... 686
21.10.1.1.3.1.3 Method 3: Acylation of Lactam Anions with Pentafluorophenyl Esters .... 686
21.10.1.1.3.1.4 Method 4: \(N\)-Alkylation ............................................................... 687
21.10.1.1.3.1.4.1 Variation 1: By Base-Mediated N-Alkylation ...................................... 687
21.10.1.1.3.1.4.2 Variation 2: By Reductive Alkylation of Lactams with Aldehydes .......... 688
21.10.1.1.3.1.4.3 Variation 3: Functionalization of an \(N\)-Alkyl Group: Chloromethylation ... 689
21.10.1.1.3.1.5 Method 5: \(N\)-Arylation ............................................................... 689
21.10.1.1.3.1.5.1 Variation 1: By Base-Mediated N-Alkylation ...................................... 687
21.10.1.1.3.1.5.2 Variation 2: By Reductive Alkylation of Lactams with Aldehydes .......... 688
21.10.1.1.3.1.6 Method 6: N-Alkenylation ............................................................. 690

21.10.1.3.1.7 Method 7: \(\alpha\)-Alkyl Lactams by Enolate Alkylation ....... 690
21.10.1.3.1.7.1 Variation 1: Via the \(N,\alpha\)-Dianion .......... 691
21.10.1.3.1.8 Method 8: Direct \(\alpha\)-Arylation .......... 692
21.10.1.3.1.9 Method 9: \(\alpha\)-Alkylidene Lactams by Addition to Aldehydes or Ketones .. 692
21.10.1.3.1.10 Method 10: Alkylation with Allylsilanes via \(N\)-Acyliminium Ion Intermediates .......... 693
21.10.1.3.1.11 Method 11: Alkylation at \(\beta\)- and More Remote Positions .......... 694
21.10.1.3.1.11.1 Variation 1: By Conjugate Addition to \(\alpha,\beta\)-Unsaturated Lactams .......... 694
21.10.1.3.1.11.2 Variation 2: Addition of Organocuprates to Conjugated Lactams .......... 695
21.10.1.3.1.12 Method 12: \(\alpha\)-Halogenation .......... 696
21.10.1.3.1.13 Method 13: \(\alpha\)-Hydroxylation .......... 697
21.10.1.3.1.14 Method 14: Alkoxy Lactams by Electrochemical Oxidation of Lactams .......... 698
21.10.1.3.1.15 Method 15: \(\alpha\)-Sulfides and \(\alpha\)-Selenides .......... 698

21.10.2 Product Subclass 2: Unsaturated Lactams ................................ 699
21.10.2.1 Synthesis of Product Subclass 2 ........................................... 699
21.10.2.1.1 Method 1: Ring-Closing Metathesis ................................. 699
21.10.2.1.2 Method 2: Metal-Mediated Coupling Reactions of Carbonyl Compounds .......... 700
21.10.2.1.3 Method 3: Carbonylative \([4+1]\) Cycloaddition .......... 701
21.10.2.1.4 Method 4: Conjugate Addition–Cyclization .......... 702
21.10.2.1.5 Method 5: Hetero \([4+2]\) Cycloadditions of (Trialkylsilyl)vinylketenes .......... 702
21.10.2.1.6 Method 6: Aza-Claisen Rearrangement of Acylaziridines .......... 703
21.10.2.1.7 Method 7: Via Azametallocyclopentene Complexes .......... 704
21.10.2.1.8 Method 8: Oxidation of Pyrroles .......... 704

21.11 Product Class 11: Peptides
W. D. Lubell, J. W. Blankenship, G. Fridkin, and R. Kaul

21.11.1 Amino Acid Protection–Deprotection ........................................ 713
21.11.1.1 Method 1: \(\alpha\)-Amino Protection ........................................ 715
21.11.1.1.1 Variation 1: tert-Butyloxycarbonyl Group .......... 716
21.11.1.1.2 Variation 2: 9-Fluorenylethoxycarbonyl Group .......... 717
21.11.1.1.3 Variation 3: Benzoyloxycarbonyl Group .......... 720
21.11.1.1.4 Variation 4: Allyloxycarbonyl Group .......... 721
21.11.1.1.5 Variation 5: 2-[(4-Nitrophenyl)sulfonyl]ethoxycarbonyl Group .......... 721
21.11.1.1.6 Method 2: \(\alpha\)-Carboxylic Acid Protection .......... 722
21.11.1.1.7 Variation 1: Methyl Ester .......... 723
21.11.1.1.8 Variation 2: Benzyl Ester .......... 724
21.11.1.1.9 Variation 3: tert-Butyl Ester .......... 724
21.11.1.1.10 Variation 4: Phenacyl Ester .......... 725
21.11.1.3 Method 3: Acidic Side-Chain Protection .......... 725
21.11.1.1.11 Variation 1: Benzyl Ester .......... 726
21.11.1.1.12 Variation 2: Cyclohexyl Ester .......... 727
21.11.1.1.13 Variation 3: tert-Butyl Ester .......... 728
21.11.1.1.14 Method 4: Basic Side-Chain Protection .......... 729
21.11.1.1.15 Variation 1: Benzoxycarbonyl Group and Derivatives .......... 730
21.11.4.2 Variation 2: 2,4-Dinitrophenyl Group ........................................... 731
21.11.4.3 Variation 3: Benzylxoyymethyl Group ........................................... 732
21.11.4.4 Variation 4: Arylsulfonyl Derivatives ........................................... 732
21.11.4.5 Variation 5: Formyl Group ......................................................... 733
21.11.4.6 Variation 6: tert-Butyloxycarbonyl Group ........................................... 733
21.11.4.7 Variation 7: Trityl Group and Derivatives ........................................... 733
21.11.4.8 Method 5: Alcoholic Side-Chain Protection ........................................... 734
21.11.4.9 Variation 1: Benzyl Group ........................................................... 735
21.11.4.10 Variation 2: 2-Bromobenzyloxycarbonyl Group ........................................... 736
21.11.4.11 Variation 3: tert-Butyl Group ........................................................... 736
21.11.4.12 Variation 4: Trityl Group and Derivatives ........................................... 736
21.11.4.13 Method 6: Amide Side-Chain Protection ........................................... 739
21.11.4.14 Variation 1: 9H-Xanthen-9-yl Group ........................................... 740
21.11.4.15 Variation 2: 2,4,6-Trimethoxybenzyl Group ........................................... 740
21.11.4.16 Variation 3: Trityl Group ........................................................... 740
21.11.4.17 Method 7: Thiol Side-Chain Protection ........................................... 741
21.11.4.18 Variation 1: 4-Methylbenzyl Group ........................................... 742
21.11.4.19 Variation 2: Acetamidomethyl Group ........................................... 742
21.11.4.20 Variation 3: Trityl Group ........................................................... 742
21.11.4.21 Method 8: Anilide Side-Chain Protection ........................................... 743
21.11.4.22 Variation 1: tert-Butyl Group ........................................................... 743
21.11.4.23 Variation 2: tert-Butylsulfanyl Group ........................................... 744
21.11.4.24 Variation 3: 2,4,6-Trimethoxybenzyl Group ........................................... 744
21.11.2 Amino Acid Activation ................................................................. 744
21.11.2.1 Method 1: α-Amino Acid Halides ........................................... 744
21.11.2.2 Variation 1: Nα-9-Fluorenylmethoxycarbonyl Amino Acid Chlorides .................. 745
21.11.2.3 Variation 2: Nα-9-Fluorenylmethoxycarbonyl Amino Acid Fluorides .................. 746
21.11.2.4 Method 2: α-Amino Acid Anhydrides ........................................... 747
21.11.2.5 Variation 1: Symmetrical Anhydrides ........................................... 747
21.11.2.6 Variation 2: Urethane-Protected Amino Acid N-Carboxyanhydrides .................. 748
21.11.2.7 Variation 3: Mixed Anhydrides ........................................... 750
21.11.2.8 Method 3: Active Esters ........................................................... 750
21.11.2.9 Variation 1: Halogenated Phenyl Esters ........................................... 752
21.11.2.10 Variation 2: Hydroxylamine-Derived Esters ........................................... 753
21.11.2.11 Variation 3: 4-Nitrophenyl Esters ........................................... 754
21.11.2.12 Method 4: Carboximidates ........................................................... 754
21.11.2.14 Variation 2: Solid-Phase Peptide Synthesis Using Carboximidates .................. 756
21.11.2.15 Method 5: Phosphonium and Uronium/Guanidinium Salts ................................ 757
21.11.2.16 Variation 1: Phosphonium Salts ........................................... 759
21.11.2.17 Variation 2: Uronium/Guanidinium Salts ........................................... 761
21.11.3 Racemization ................................................................. 762
21.11.4 Supports for Solid-Phase Peptide Synthesis ........................................... 766
21.11.4.1 Method 1: Polystyrene-Based Resins ........................................... 767
21.11.4.2 Method 2: Polyacrylamide-Based Resins ........................................... 768
21.11.4.3 Method 3: Poly(ethylene glycol)-Based Resins ........................................... 768
21.11.4.4 Method 4: TentaGel ........................................................... 768
21.11.4.3.2 Variation 2: Poly(ethylene glycol)-Dimethylacrylamide Copolymer

21.11.4.3.3 Variation 3: Cross-Linked Ethoxylate Acrylate Resin

21.11.4.3.4 Variation 4: Polyethylene–Polystyrene and Polyethylene–Polyoxopropylene Resins

21.11.4.3.5 Variation 5: Super Permeable Organic Combinatorial Chemistry Resin

21.11.5 Handles and Linkers for Solid-Phase Peptide Synthesis

21.11.5.1 Method 1: Generation of C-Terminal Peptide Carboxylic Acids

21.11.5.1.1 Variation 1: Merrifield Resin (Chloromethyl Cross-Linked Polystyrene Resin)

21.11.5.1.2 Variation 2: Wang Resin (4-Benzylxoybenzyl Alcohol Cross-Linked Polystyrene)

21.11.5.1.3 Variation 3: Super Acid Sensitive Resin

21.11.5.1.4 Variation 4: PAM Resin

21.11.5.1.5 Variation 5: Trityl Resin

21.11.5.1.6 Variation 6: Rink Acid Resin

21.11.5.1.7 Variation 7: HYCRAM Resin

21.11.5.1.8 Variation 8: Photolabile Linkers

21.11.5.2 Method 2: Generation of C-Terminal Peptide Amides

21.11.5.2.1 Variation 1: Benzhydrylamine and 4-Methylbenzhydrylamine Resins

21.11.5.2.2 Variation 2: Rink Amide Resin

21.11.5.2.3 Variation 3: Sieber Amide Resin

21.11.5.2.4 Variation 4: Oxime-Based (Kaiser–DeGrado) Resin

21.11.5.2.5 Variation 5: 4-Hydroxymethylbenzoic Acid Resin

21.11.5.3 Method 3: Generation of Peptides with Other C-Terminal Modifications

21.11.5.4 Method 4: Safety-Catch Linker Resins

21.11.5.5 Method 5: Analytical Procedures for Determining Loading on the Solid Support

21.11.5.5.1 Variation 1: Fmoc Monitoring

21.11.5.5.2 Variation 2: Picric Acid Test

21.11.5.6 Method 6: Qualitative Tests for Determination of Free Amino Groups on the Solid Support

21.11.5.6.1 Variation 1: Ninhydrin (Kaiser) Test

21.11.5.6.2 Variation 2: 2,4,6-Trinitrobenzenesulfonic Acid Test

21.11.5.6.3 Variation 3: Chloranil Test

21.11.6 Interpeptide Amide Bond Formation

21.11.6.1 Method 1: Protected Segment Condensation

21.11.6.2 Method 2: Chemoselective Ligation

21.11.6.2.1 Variation 1: Native Chemical Ligation

21.11.6.2.2 Variation 2: Auxiliary-Mediated Chemical Ligation
21.12 Product Class 12: Metal Amides and Imides
T. R. Bailey

21.12 Product Class 12: Metal Amides and Imides ............................................. 811
21.12.1 Product Subclass 1: Group 15 (Arsenic, Antimony, and Bismuth) Amides
and Imides ............................................................................................................. 811
21.12.1.1 Synthesis of Product Subclass 1 ............................................................. 812
21.12.1.1.1 Method 1: Synthesis from Arsenic, Antimony, and Bismuth Halides .. 812
21.12.1.1.2 Method 2: Generation by Ligand Displacement .................................. 813
21.12.2 Product Subclass 2: Silicon Amides and Imides ...................................... 813
21.12.2.1 Synthesis of Product Subclass 2 ............................................................ 814
21.12.2.1.1 Method 1: Synthesis from Trialkylhalosilanes .................................... 814
21.12.2.1.1.1 Variation 1: Anion Formation on Amide ........................................ 814
21.12.2.1.1.2 Variation 2: Using Nitrogenous Bases ............................................ 815
21.12.2.1.2 Method 2: Exchange with Silylated Nitrogen Compounds ................. 815
21.12.2.1.2.1 Variation 1: With Hexamethyldisilazane ...................................... 815
21.12.2.1.2.2 Variation 2: With N-Silylated Amides ........................................... 816
21.12.2.1.3 Method 3: Exchange with N,O-Bis(trimethylsilyl)acetamide .............. 816
21.12.2.1.4 Method 4: Synthesis from Acid Chlorides and Hexamethyldisilazane .... 817
21.12.2.1.5 Method 5: Oxidative Addition of Trialkylsilanes .............................. 817
21.12.3 Product Subclass 3: Group 14 (Germanium, Tin, and Lead) Amides and
Imides ...................................................................................................................... 818
21.12.3.1 Synthesis of Product Subclass 3 ............................................................ 818
21.12.3.1.1 Method 1: Synthesis from Trialkylmetal Halides ................................ 818
21.12.3.1.2 Method 2: Synthesis from Metal Oxides .......................................... 819
21.12.4 Product Subclass 4: Boron Amides and Imides ....................................... 819
21.12.4.1 Synthesis of Product Subclass 4 ............................................................ 820
21.12.4.1.1 Method 1: Synthesis from Boron Halides ......................................... 820
21.12.4.1.1.1 Variation 1: Via Transmetalation ................................................ 820
21.12.4.1.1.2 Variation 2: By Addition of Dialkylbromoboranes ........................... 820
21.12.4.1.2 Method 2: Exchange with N-Silylated Amides .................................. 821
21.12.4.1.3 Method 3: Synthesis from Boron Imidates ...................................... 822
21.12.5 Product Subclass 5: Groups 3–13 Transition Metal Amides .................... 822
21.12.5.1 Synthesis of Product Subclass 5 ............................................................ 822
21.12.5.1.1 Method 1: Synthesis from Metal Halides ........................................... 822
21.12.5.1.2 Method 2: Synthesis from Diphenylmercury .................................... 823
21.12.6 Product Subclass 6: Group 2 (Beryllium, Magnesium, Calcium,
and Barium) Amides and Imides ............................................................................ 824
21.12.6.1 Synthesis of Product Subclass 6 ............................................................ 824
21.12.6.1.1 Method 1: Metalation with Grignard Reagents ................................ 824
21.12.6.1.2 Method 2: Metalation with Metal Carbonates and Metal Hydroxides .... 825
21.12.7 Product Subclass 7: Group 1 (Lithium, Sodium, Potassium, Rubidium, and Cesium) Amides and Imides .................................................. 825

21.12.7.1 Synthesis of Product Subclass 7 ........................................... 826

21.12.7.1.1 Method 1: Metalation with Potassium Fluoride on Alumina ........ 826
21.12.7.1.2 Method 2: Metalation by Metal Hydrides .......................... 826
21.12.7.1.3 Method 3: Metalation with Metal Carbonates ..................... 827
21.12.7.1.4 Method 4: Metalation with Metal Hydrides and Metal Alkoxides ... 827
21.12.7.1.4.1 Variation 1: With Sodium Hydroxide .......................... 827
21.12.7.1.4.2 Variation 2: With Potassium tert-Butoxide .................... 828
21.12.7.1.5 Method 5: Metalation with Metal Amides .......................... 828

21.13 Product Class 13: N-Heteroatom-Substituted Alkanamides
P. R. Blakemore

21.13.1 Product Subclass 1: Acyl Nitro Compounds ................................ 833
21.13.2 Product Subclass 2: Acyl Nitroso Compounds ................................ 834
21.13.3 Product Subclass 3: N-Acyl Sulfoximides and N-Acyl Sulfimides ........ 835
21.13.3.1 Synthesis of Product Subclass 3 ........................................ 835
21.13.3.1.1 Method 1: Oxidative Imination of Sulfoxides and Sulfides ........ 836
21.13.3.1.2 Method 2: N-Acylation of Sulfoximides and Sulfimides .......... 837
21.13.4 Product Subclass 4: Acyl Azides ........................................... 838
21.13.4.1 Synthesis of Product Subclass 4 ........................................ 838
21.13.4.1.1 Method 1: Oxidative Azidonation of Aldehydes ...................... 838
21.13.4.1.2 Method 2: Acyl Substitution with an Azide Nucleophile .......... 840
21.13.4.1.2.1 Variation 1: From Activated Carboxylic Acid Derivatives ...... 840
21.13.4.1.2.2 Variation 2: From Carboxylic Acids Using Diphenylphosphoryl Azide ... 841
21.13.4.1.2.3 Variation 3: From Esters Using Diethylaluminum Azide .......... 843
21.13.4.1.3 Method 3: Nitrosation of Hydrazides .................................. 844
21.13.5 Product Subclass 5: Acyl Diazenes ........................................ 845
21.13.5.1 Synthesis of Product Subclass 5 ........................................ 846
21.13.5.1.1 Method 1: Oxidation of Hydrazides .................................. 846
21.13.6 Product Subclass 6: (Acylimino)phosphoranes ............................ 847
21.13.6.1 Synthesis of Product Subclass 6 ........................................ 847
21.13.6.1.1 Method 1: N-Acylation of Iminophosphoranes ...................... 847
21.13.6.1.2 Method 2: Staudinger Reaction of Acyl Azides .................... 848
21.13.7 Product Subclass 7: N,N-Diheteroatom-Substituted Amides (Anomeric Amides) .................................................. 849
21.13.8 Product Subclass 8: N-Halo Amides ....................................... 850
21.13.8.1 Synthesis of Product Subclass 8 ........................................ 850
21.13.8.1.1 Method 1: Oxidative Halogenation of Amides ...................... 850
21.13.8.1.1.1 Variation 1: Fluorination of Amides .............................. 851
21.13.8.1.1.2 Variation 2: Chlorination of Amides .................................... 851
21.13.8.1.1.3 Variation 3: Bromination of Amides .................................... 853
21.13.8.1.1.4 Variation 4: Iodination of Amides ...................................... 854

21.13.9 Product Subclass 9: N-Hydroxy Amides ........................................ 855
21.13.9.1 Synthesis of Product Subclass 9 ............................................. 856
21.13.9.1.1 Method 1: Oxidation of Amides, Hydroxylamines, and Amines .......... 856
21.13.9.1.2 Method 2: N-Acylation of Hydroxylamines ................................ 857
21.13.9.1.3 Method 3: Deprotection of N-Silox, N-Alkoxy, or N-Alkoxo Amides .... 860
21.13.9.1.4 Method 4: Ene Reactions of Acyl Nitroso Compounds .................. 862
21.13.9.1.5 Method 5: Synthesis from Nitro Compounds .......................... 864

21.13.10 Product Subclass 10: N-Acyloxy Amides ..................................... 865
21.13.10.1 Synthesis of Product Subclass 10 .......................................... 865
21.13.10.1.1 Method 1: O- or N-Acylation ............................................. 865
21.13.10.1.1.1 Variation 1: By O-Acylation of N-Hydroxy Amides ............... 865
21.13.10.1.1.2 Variation 2: N-Acylation of O-Acyl Hydroxylamines ............. 867

21.13.11 Product Subclass 11: N-Alkoxy Amides and O-Silox Amides ............... 867
21.13.11.1 Synthesis of Product Subclass 11 .......................................... 868
21.13.11.1.1 Method 1: O-Alkylation or O-Silylation of N-Hydroxy Amides .......... 868
21.13.11.1.1.1 Variation 1: O-Silylation of N-Hydroxy Amides .................... 868
21.13.11.1.1.2 Variation 2: O-Alkylation of N-Hydroxy Amides .................. 869
21.13.11.1.2 Method 2: N-Acylation of O-Alkyl or O-Silyl Hydroxylamine Derivatives 871
21.13.11.1.2.1 Variation 1: With Activated Carboxylic Acid Derivatives .......... 871
21.13.11.1.2.2 Variation 2: Reactions of Esters and Imides with O-Alkyl N-Metalated Hydroxylamine Reagents 873
21.13.11.1.3 Method 3: Hetero-Diels–Alder Reaction of Acyl Nitroso Compounds .... 874

21.13.12 Product Subclass 12: N-Sulfonyl and N-Sulfinyl Amides .................. 876
21.13.12.1 Synthesis of Product Subclass 12 .......................................... 876
21.13.12.1.1 Method 1: Oxidation of N-Sulfanyl and N-Sulfanyl Amides ............ 876
21.13.12.1.2 Method 2: N-Acylation of Sulfonamides and Sulfinamides .......... 877
21.13.12.1.3 Method 3: N-Sulfonylation of Amides .................................... 879
21.13.12.1.4 Method 4: Synthesis from N-Sulfonyl Isocyanates .................... 880

21.13.13.1 Synthesis of Product Subclass 13 .......................................... 882
21.13.13.1.1 Method 1: N-Sulfanylation of Amides .................................... 882
21.13.13.1.2 Method 2: N-Acylation of Sulfinamides ................................ 883

21.13.14.1.2 Method 2: Synthesis from Imidoyl Chlorides ........................ 886

21.13.15 Product Subclass 15: Acyl Hydrazones ..................................... 887
21.13.15.1 Synthesis of Product Subclass 15 .......................................... 887
21.13.15.1.1 Method 1: Acylation of Hydrazones .................................. 887
21.13.15.1.2 Method 2: Synthesis from Hydrazides and Carbonyl Compounds .... 888

21.13.16 **Product Subclass 16: Hydrazides** ........................................ 889
21.13.16.1 Synthesis of Product Subclass 16 ........................................ 890
21.13.16.1.1 Method 1: Electrophilic Amination of Amides ....................... 890
21.13.16.1.2 Method 2: Acylation of Hydrazine Derivatives ..................... 891
21.13.16.1.3 Method 3: Reductive Processes ...................................... 892
21.13.16.1.4 Method 4: Addition of Carbon-Centered Nucleophiles to \( N \)-Acyl Hydrazones ........................................... 894

21.14 **Product Class 14: Acylphosphorus Compounds**
A. Whitehead, S. R. Sieck, S. Mukherjee, and P. R. Hanson

21.14 **Product Class 14: Acylphosphorus Compounds** ................................ 907
21.14.1 **Product Subclass 1: Tetracoordinate Acylphosphorus Compounds** ........ 907
21.14.1.1 Synthesis of Product Subclass 1 ........................................ 907
21.14.1.1.2 Method 2: Dithiane Alkylation, Followed by Hydrolysis ............. 908
21.14.1.1.3 Method 3: Metal-Mediated Oxidations of \( \alpha \)-Hydroxy Phosphonates .... 909
21.14.1.1.3.1 Variation 1: Heterogeneous Reactions ................................ 910
21.14.1.1.3.2 Variation 2: Solvent-Free Reactions .................................. 910
21.14.1.2 Applications of Product Subclass 1 in Organic Synthesis ............... 911
21.14.1.2.1 Method 1: Halogenation Reactions of Acylphosphonates ............ 911
21.14.1.2.1.1 Variation 1: Formation of \( \alpha \)-Chloro Carboxylic Acids .......... 911
21.14.1.2.1.2 Variation 2: Selective Chlorination of \( \alpha \)-Phosphorylated Aldehydes .... 913
21.14.1.2.1.3 Variation 3: Fluorination of Acylphosphonates ................... 913
21.14.1.2.2 Method 2: Condensation of Acylphosphonates with Amines and Hydrazines, and Subsequent Reactions ........................................ 914
21.14.1.2.2.1 Variation 1: Reductive Amination .................................... 914
21.14.1.2.2.2 Variation 2: Pyrazoles via the Vilsmeier–Haack Reaction ........ 915
21.14.1.2.2.3 Variation 3: Synthesis of Bis(acylphosphonates) .................. 916
21.14.1.2.3 Method 3: Reduction of Acylphosphonates .......................... 917
21.14.1.2.3.1 Variation 1: Diastereoselective Reductions .......................... 917
21.14.1.2.3.2 Variation 2: Enantioselective Reductions ............................ 918
21.14.1.2.4 Method 4: Organometallic Additions to Acylphosphonates ........ 918
21.14.1.2.4.1 Variation 1: Grignard Additions ...................................... 918
21.14.1.2.4.2 Variation 2: Indium-Mediated Additions ............................ 919
21.14.1.2.5 Method 5: Diels–Alder Reactions of Acylphosphonates ............ 920
21.14.1.2.6 Method 6: Mukaiyama–Michael Reactions of \( \beta,\gamma \)-Unsaturated Acylphosphonates ........................................ 921
21.14.1.2.7 Method 7: Enolization and Subsequent Reactions of Acylphosphonates .... 922
21.14.1.2.7.1 Variation 1: C-Alkylation of Acylphosphonates ................. 922
21.14.1.2.7.2 Variation 2: Asymmetric Hydrogenation ............................ 923
21.14.1.2.7.3 Variation 3: Cross-Coupling Reactions ................................ 924
21.14.1.2.8 Method 8: Reaction of Acylphosphonates with Phosphorus(III) Compounds ............................................... 925
21.14.1.2.8.1 Variation 1: Reaction with Trialkyl Phosphites ........................... 925
21.14.1.2.8.2 Variation 2: Reaction with 2-Isocyanato-4H-1,3,2-benzodioxaphosphin-4-one ..................................................... 926
21.14.1.2.8.3 Variation 3: Coupling Reactions of Aryl Acylphosphonates with Aryl Phosphonates ............................................. 927
21.14.1.2.9 Method 9: Metal-Mediated Reactions of Acylphosphonates ............ 928
21.14.1.2.9.1 Variation 1: Ytterbium-Promoted Rearrangements ..................... 928
21.14.1.2.9.2 Variation 2: Samarium(II) Iodide Promoted Three-Component Couplings 929
21.14.1.2.9.3 Variation 3: Tin-Catalyzed Intramolecular Acylations ........................... 930
21.14.1.2.10 Method 10: Deprotection of Acylphosphonates ................... 931

21.14.2.1 Synthesis of Product Subclass 2 ........................................... 932
21.14.2.1.1 Method 1: Alkylation of Secondary Acylphosphines ................... 932
21.14.2.1.2 Method 2: Acylation of Di- and Tricoordinate Phosphines ................... 933
21.14.2.1.2.1 Variation 1: Under Basic Conditions ........................... 933
21.14.2.1.2.2 Variation 2: Under Nonbasic Conditions ............................... 934
21.14.2.2 Applications of Product Subclass 2 in Organic Synthesis ................... 935
21.14.2.2.1 Method 1: Enolization and Aldol Reactions of Acylphosphines ......... 935
21.14.2.2.2 Method 2: Reactions of Formylphosphines ........................... 936
