40.4.1 Method 1: Synthesis of \(N\)-Fluoroalkanamines

40.4.1.1 Variation 1: From Imines

40.4.1.1.1 Variation 2: From Amides

40.4.1.1.2 Variation 3: From Amines

40.4.1.2 Method 2: Synthesis of Acyclic \(N\)-Fluoro dialkylamines

40.4.1.2.1 Variation 1: From Imines

40.4.1.2.2 Variation 2: From Secondary Amines

40.4.1.3 Method 3: Synthesis of 1-Fluoroaziridines

40.4.1.4 Method 4: Synthesis of Higher \(N\)-Fluoroazacyclanes

40.4.2 Product Subclass 2: \(N\)-Chloroamines

40.4.2.1 Synthesis of Product Subclass 2

40.4.2.1.1 Method 1: Synthesis of \(N\)-Chloroalkanamines

40.4.2.1.1.1 Variation 1: Using Primary Amines Using Chlorine

40.4.2.1.1.2 Variation 2: Using Primary Amines Using a Metal Hypochlorite

40.4.2.1.1.3 Variation 3: Using Primary Amines Using tert-Butyl Hypochlorite

40.4.2.1.1.4 Variation 4: Using Primary Amines Using \(N\)-Chlorosuccinimide

40.4.2.1.1.5 Variation 5: Using \(N\)-(Trimethylsilyl)ethanamine

40.4.2.1.2 Method 2: Synthesis of Acyclic \(N\)-Chlorodialkylamines

40.4.2.1.2.1 Variation 1: From Secondary Amines Using Metal Hypochlorites

40.4.2.1.2.2 Variation 2: From Secondary Amines Using tert-Butyl Hypochlorite

40.4.2.1.2.3 Variation 3: From Secondary Amines Using \(N\)-Chloroamides

40.4.2.1.2.4 Variation 4: From (Trialkylsilyl)amines

40.4.2.1.2.5 Variation 5: From Imines and Alkenes

40.4.2.1.2.6 Variation 6: From Aziridines

40.4.2.1.3 Method 3: Synthesis of 1-Chloroaziridines

40.4.2.1.3.1 Variation 1: Using Chlorine

40.4.2.1.3.2 Variation 2: Using a Metal Hypochlorite

40.4.2.1.3.3 Variation 3: Using tert-Butyl Hypochlorite

40.4.2.1.3.4 Variation 4: Using \(N\)-Chlorosuccinimide

40.4.2.1.4 Method 4: Synthesis of 1-Chloroazetidines

40.4.2.1.5 Method 5: Synthesis of Higher \(N\)-Chloroazacyclanes

40.4.2.1.5.1 Variation 1: From Azacyclanes Using Chlorine

40.4.2.1.5.2 Variation 2: From Azacyclanes Using Hypochlorites

40.4.2.1.5.3 Variation 3: From Azacyclanes Using \(N\)-Chlorosuccinimide

40.4.2.1.5.4 Variation 4: From Cyclic Imines

40.4.2.1.6 Method 6: Synthesis of Higher \(N\)-Chloroazacyclanes

40.4.3 Product Subclass 3: \(N\)-Bromoamines

40.4.3.1 Synthesis of Product Subclass 3

40.4.3.1.1 Method 1: Synthesis of \(N\)-Bromoalkanamines

40.4.3.1.1.1 Variation 1: Using Bromine

40.4.3.1.1.2 Variation 2: Using Sodium Hypobromite

40.4.3.1.2 Method 2: Synthesis of Acyclic \(N\)-Bromodialkylamines

40.4.3.1.2.1 Variation 1: From Secondary Amines

40.4.3.1.2.2 Variation 2: From \(N\)-Silylamines

40.4.3.1.2.3 Variation 3: From Imines

40.4.3.1.3 Method 3: Synthesis of 1-Bromoaziridines

40.4.3.1.3.1 Variation 1: Using Bromine

40.5.1.1.1.1.2 Variation 2: Alkylation of O,N-Diprotected Hydroxylamines 937
40.5.1.1.1.1.3 Variation 3: Alkylation of N-(Benzyloxy)-4-toluenesulfonamide 941
40.5.1.1.1.1.4 Variation 4: Addition to Multiple Bonds ......................... 942
40.5.1.1.1.1.5 Variation 5: Alkylation of Ethyl 3-Methyl-5-oxo-2,5-dihydroisoxazole-4-carboxylate ..................................................... 942
40.5.1.1.1.2 Method 2: Reduction of Oximes .................................... 943
40.5.1.1.1.2.1 Variation 1: Using Borohydride or Cyanoborohydride ........ 943
40.5.1.1.1.2.2 Variation 2: Using Pyridine–Borane ........................... 948
40.5.1.1.1.2.3 Variation 3: Using Diborane ........................................ 950
40.5.1.1.1.2.4 Variation 4: Using Borane–Trialkylamines .................... 950
40.5.1.1.1.3 Method 3: Reaction of Organometallic Reagents with Oximes .. 951
40.5.1.1.1.3.1 Variation 1: Addition of Organolithium Reagents to Oximes 951
40.5.1.1.1.3.2 Variation 2: Addition of Organomagnesium Reagents to Oximes 951
40.5.1.1.1.3.3 Variation 3: Reaction of O-Trimethylsilyl Oxime Ethers with Ketene Acetals 952
40.5.1.1.1.3.4 Variation 4: Addition of Allylboronates to Oximes ............ 953
40.5.1.1.1.4 Method 4: Synthesis from Nitrones and Organometallic Reagents 953
40.5.1.1.1.5 Method 5: Alkylation of Oximes .................................... 955
40.5.1.1.1.6 Method 6: Synthesis from O-Benzylhydroxylamines ............ 956

Science of Synthesis Original Edition Volume 40b
© Georg Thieme Verlag KG
### 40.5.1.1.7 Method 7: Synthesis from α-Chloro-α-nitroso Compounds

956

### 40.5.1.1.8 Method 8: Reduction of Nitroalkanes

959

#### 40.5.1.1.8.1 Variation 1: By Catalytic Hydrogenation

959

#### 40.5.1.1.8.2 Variation 2: Using Diborane or Borohydrides

959

#### 40.5.1.1.8.3 Variation 3: Using Aluminum Amalgam

960

#### 40.5.1.1.8.4 Variation 4: Using Zinc

961

#### 40.5.1.1.8.5 Variation 5: Using Tin(II) Compounds

961

#### 40.5.1.1.8.6 Variation 6: Using Samarium(II) Iodide

962

#### 40.5.1.1.8.7 Variation 7: Using Sodium Dithionite

962

#### 40.5.1.1.8.8 Variation 8: By Electrochemical Reduction

963

#### 40.5.1.1.8.9 Variation 9: By Palladium-Catalyzed Hydrogenation with Triethylsilane

964

### 40.5.1.1.9 Method 9: Synthesis from Nitroso Compounds

964

### 40.5.1.1.10 Method 10: Oxidation of Primary Amines

965

#### 40.5.1.1.10.1 Variation 1: Using Peroxy Acids or Peroxy Acid Anhydrides

965

#### 40.5.1.1.10.2 Variation 2: Using Hydrogen Peroxide and Sodium Tungstate

966

#### 40.5.1.1.10.3 Variation 3: Using Oxone/Silica Gel

967

#### 40.5.1.1.10.4 Variation 4: Using Dimethyldioxirane

968

### 40.5.1.1.11 Method 11: Hydrolysis of Oxaziridines

968

### 40.5.1.1.12 N,N-Dialkylhydroxylamines

969

#### 40.5.1.1.12.1 Method 1: Alkylation of Hydroxylamines

970

#### 40.5.1.1.12.1.1 Variation 1: Using Alkyl Halides

970

#### 40.5.1.1.12.1.2 Variation 2: By Alkylation–Hydrogenolysis of N-Alkyl-O-benzylhydroxylamines

970

#### 40.5.1.1.12.1.3 Variation 3: Using Organosulfonic Acid Esters

971

#### 40.5.1.1.12.1.4 Variation 4: By Addition of N-Alkylhydroxylamines to Activated Double Bonds

972

#### 40.5.1.1.12.1.5 Variation 5: By Reaction of N-Alkylhydroxylamines with Epoxides

974

#### 40.5.1.1.12.1.6 Variation 6: By Reaction of N,N-Bis(benzotriazol-1-ylmethyl)hydroxylamine with Organometallic Reagents

975

#### 40.5.1.1.12.1.7 Variation 7: By Palladium(0)-Catalyzed Hydroxyamination of Allyl Esters

975

#### 40.5.1.1.12.1.8 Variation 8: By Cyclic Alkylation of N-(Pent-4-enyl)hydroxylamines

976

#### 40.5.1.1.12.1.9 Variation 9: From N-Substituted Hydroxylamines and Sugar Derivatives

976

#### 40.5.1.1.12.2 Method 2: Reduction of N-Hydroxymides and N-Hydroxylactams

978

#### 40.5.1.1.12.3 Method 3: Reductive Alkylation of Oximes with Carboxylic Acids

978

#### 40.5.1.1.12.4 Method 4: Reduction of Nitrones

979

#### 40.5.1.1.12.4.1 Variation 1: Using Complex Metal Hydrides

979

#### 40.5.1.1.12.4.2 Variation 2: Using Trichlorosilane

980

#### 40.5.1.1.12.4.3 Variation 3: By Asymmetric Hydrogenation Using Iridium Catalysts

980

#### 40.5.1.1.12.4.4 Variation 4: By Asymmetric Hydrosilylation with a Ruthenium(II)–Phosphine Complex Catalyst

981

#### 40.5.1.1.12.5 Method 5: Synthesis from Nitrones and Organometallic Reagents

981

#### 40.5.1.1.12.6 Method 6: Synthesis from Nitrones Using Vinylboronic Esters and Dimethylzinc

990

#### 40.5.1.1.12.7 Method 7: Addition of Organometallic Reagents to Organic Nitro Compounds

990

#### 40.5.1.1.12.8 Method 8: Pyrolysis of Tertiary Amine Oxides

991

#### 40.5.1.1.12.9 Method 9: Rearrangement of O-Allyl-N-benzylhydroxylamines

994
40.5.1.2.10 Method 10: Oxidation of Secondary Amines ................................. 995
  40.5.1.2.10.1 Variation 1: Using Dibenzoyl Peroxide ............................... 995
  40.5.1.2.10.2 Variation 2: By Catalytic Oxidation with Hydrogen Peroxide .......... 996
  40.5.1.2.10.3 Variation 3: Using Dimethyldioxirane .......................... 996
  40.5.1.2.10.4 Variation 4: Using Oxone ............................................. 997
40.5.1.2.11 Method 11: Samarium(II) Iodide Induced Reductive Cross Coupling of Nitrones with Aldehydes and Ketones .......................... 997

40.5.1.3 N-Alkoxyammonium Salts ................................................ 998
  40.5.1.3.1 Method 1: Alkylation of Tertiary Amine Oxides with Haloalkanes ..... 998
  40.5.1.3.2 Method 2: Alkylation of Tertiary Amine Oxides with Sultones or Glycolog Sulfites .............................................. 999
  40.5.1.3.3 Method 3: Alkylation of O,N,N-Trisubstituted Hydroxylamines with Haloalkanes .............................................. 1000
  40.5.1.3.4 Method 4: Alkylation of O,N,N-Trisubstituted Hydroxylamines with Methyl Trifluoromethanesulfonate .......................... 1001
  40.5.1.3.5 Method 5: Exhaustive Methylation of O-Alkylhydroxylamines .......... 1002
  40.5.1.3.6 Method 6: Synthesis from 3-(Bromomethyl)-3-phenyl-1,2-dioxetane and Tertiary Amines .............................................. 1002

40.5.2 Product Subclass 2: Acyclic O-Alkyl-, O,N-Dialkyl-, and Trialkylhydroxylamines .................................................. 1003
  40.5.2.1 Synthesis of Product Subclass 2 ........................................... 1003
  40.5.2.1.1 Acyclic O-Alkylhydroxylamines ........................................ 1003
  40.5.2.1.1.1 Method 1: Synthesis from O-Alkylloximes ........................... 1003
  40.5.2.1.1.2 Method 2: Synthesis from O-Alkyl Hydroxamates .................. 1006
  40.5.2.1.1.3 Method 3: Synthesis from Cyclic N-Hydroxyimides by Alkylation with Organic Halides .............................................. 1007
  40.5.2.1.1.4 Method 4: Synthesis from Cyclic N-Hydroxyimides by Alkylation with Alcohols .................................................. 1018
  40.5.2.1.1.5 Method 5: Synthesis from N-Hydroxycarbamates .................... 1027
  40.5.2.1.1.6 Method 6: Synthesis from Ethyl N-Hydroxyimidates ................ 1030
  40.5.2.1.1.7 Method 7: Electrophilic Amination of Alkoxides .................... 1032
  40.5.2.1.1.8 Method 8: Synthesis from Hydroxylamine-N,N-disulfonic Acid ........ 1034
  40.5.2.1.2 Acyclic O,N-Dialkylhydroxylamines .................................... 1035
  40.5.2.1.2.1 Method 1: Alkylation of Hydroxylamine ............................. 1036
  40.5.2.1.2.2 Method 2: Alkylation of O-Alkylhydroxylamines .................... 1036
  40.5.2.1.2.3 Method 3: Alkylation of N-Alkoxy carbamates ...................... 1038
  40.5.2.1.2.4 Method 4: Alkylation of Hydroxamic Acids ........................ 1041
  40.5.2.1.2.5 Method 5: Alkylation of N-Alkoxyureas ............................. 1042
  40.5.2.1.2.6 Method 6: Alkylation of O-Benzyl-N-(diethoxyphosphoryl)hydroxylamine .................................................. 1042
  40.5.2.1.2.7 Method 7: Synthesis from Quaternized Oximes ...................... 1043
  40.5.2.1.2.8 Method 8: Reduction of Oxime Ethers ................................. 1044
  40.5.2.1.2.9 Method 9: Carbon Radical Addition to Aldoxime Ethers ................ 1048
  40.5.2.1.2.10 Method 10: Addition of Organometallic Reagents to Oxime Ethers .... 1049
40.5.2.1.2.11 Method 11: Oxidation of Tertiary Alkyl Lithium Amides with tert-Butyl Peroxybenzoate .......................................... 1052
40.5.2.1.2.12 Method 12: Electorereductive Coupling of Ketones with Oxime Ethers 1052
40.5.2.1.3 Method 13: O,N,N-Trialkylhydroxylamines ............................................. 1053
40.5.2.1.3.1 Method 1: Alkylation of O-Alkylhydroxylamines ................................. 1053
40.5.2.1.3.2 Method 2: Alkylation of O,N-Dialkylhydroxylamines ............................. 1054
40.5.2.1.3.3 Method 3: Alkylation of N,N-Dialkylhydroxylamines ............................. 1055
40.5.2.1.3.4 Method 4: Reductive Alkylation of O,N-Dialkylhydroxylamines with Ketones or Aldehydes ................................. 1056
40.5.2.1.3.5 Method 5: Addition of Carbon Radicals to Nitrooxides .......................... 1058
40.5.2.1.3.6 Method 6: Synthesis from Tertiary Amine Oxides by Meisenheimer Rearrangement ................................. 1060
40.5.2.1.3.7 Method 7: Synthesis from 2,2-Disubstituted Isoxazolidinium Salts .......... 1063
40.5.2.1.3.8 Method 8: Synthesis from Acyclic Oxyiminium Ions ............................. 1063
40.5.2.1.3.9 Method 9: Reduction of Weinreb Amides ........................................... 1064
40.5.2.1.3.10 Method 10: Direct Amination of Alkenes ........................................... 1065

40.6 Product Class 6: 1-Oxa-2-azacycloalkanes
D. Geffken and M. A. Köllner

40.6 Product Class 6: 1-Oxa-2-azacycloalkanes .............................................. 1083
40.6.1 Synthesis of Product Class 6 ............................................................... 1083
40.6.1.1 Method 1: Synthesis from Hydroxylamine and 2,4-Dibromo- 2,4-dimethylpentan-3-one ................................ 1083
40.6.1.2 Method 2: Intramolecular Cyclization of N-Alkylhydroxylamines .................. 1083
40.6.1.3 Method 3: Synthesis from Phorone with Hydroxylamine ............................. 1084
40.6.1.4 Method 4: Alkylation of Alkyl N-Hydroxycarbamates ................................ 1084
40.6.1.5 Method 5: Synthesis from N-Hydroxypthalimide .................................... 1086
40.6.1.6 Method 6: Synthesis from Benzohydroxamic Acid .................................. 1088
40.6.1.7 Method 7: Synthesis from N-Allylhydroxylamines .................................... 1089
40.6.1.8 Method 8: Synthesis from N-Homoallylic Hydroxylamines .......................... 1089
40.6.1.9 Method 9: Synthesis from O-Allylic Hydroxylamines ................................ 1090
40.6.1.10 Method 10: Synthesis from O-Homoallylic Hydroxylamines ...................... 1091
40.6.1.11 Method 11: Synthesis from N-Alka-2,3-dienylhydroxylamines .................... 1092
40.6.1.12 Method 12: Synthesis from O-Allyloximes by Selenocyclization .................. 1093
40.6.1.13 Method 13: Ring-Closing Metathesis of N,O-Dialkenyl-Substituted Hydroxylamines ............................................. 1094
40.6.1.14 Method 14: Reduction of 5,6-Dihydro-4H-1,2-oxazines ............................ 1097
40.6.1.15 Method 15: Reduction of 4,5-Dihydroisoxazolium Tetrafluoroborates .......... 1098
40.6.1.16 Method 16: Boron Trifluoride Assisted Alkylation of 4,5-Dihydroisoxazoles ............................................. 1098
40.6.1.17 Method 17: Synthesis from 5,6-Dihydro-4H-oxazinium Salts ...................... 1099
40.6.1.18 Method 18: Allylation of Isoxazolidin-5-ols ......................................... 1100
40.6.1.19 Method 19: Synthesis from Organonitroso Compounds by Cycloaddition .... 1100
40.6.1.19.1 Variation 1: Synthesis from Perfluoronitrosoalkanes .............................. 1100
40.6.1.19.2 Variation 2: Synthesis from Acylnitroso Compounds ............................ 1101
40.6.1.19.3 Variation 3: Synthesis from α-Chloronitroso Compounds ........................ 1105
40.6.1.20 Method 20: Rearrangement of Cyclic N-Oxides (Meisenheimer Rearrangement) .......................................... 1107
40.6.1.21 Method 21: Synthesis from Nitrones by 1,3-Dipolar Cycloaddition .... 1111
40.6.1.21.1 Variation 1: Synthesis from Achiral Nitrones .......................... 1111
40.6.1.21.2 Variation 2: Synthesis from Chiral Nitrones .......................... 1119
40.6.1.21.3 Variation 3: Addition of Lithiated Methoxyallene to Chiral Nitrones .. 1121
40.6.1.21.4 Variation 4: In Situ Conversion of Oximes into Nitrones Followed by 1,3-Cycloaddition ......................................... 1122
40.6.1.21.5 Variation 5: Palladium-Catalyzed Allene Insertion Coupled with Nitrone 1,3-Dipolar Cycloaddition ......................... 1124
40.6.1.21.6 Variation 6: Synthesis from Nitrones via [3 + 3] Dipolar Cycloaddition with Cyclopropane-1,1-dicarboxylates ................................. 1124
40.6.1.22 Method 22: Synthesis from Nitrones and α-Lithiated Aryloxiranes ........ 1126
40.6.1.23 Method 23: Synthesis from Nitrones and Lithiated 2-(1-Chloroethyl)-4,5-dihydrooxazoles ...................................... 1127
40.6.1.24 Method 24: Synthesis from Oxaziridines and Alkenes .................. 1128

40.7 Product Class 7: Hydrazines and Hydrazinium Salts

P. Rademacher

40.7 Product Class 7: Hydrazines and Hydrazinium Salts .......................... 1133
40.7.1 Product Subclass 1: Acyclic Alkylhydrazines ................................ 1133
40.7.1.1 Synthesis of Product Subclass 1 ........................................... 1135
40.7.1.1.1 Method 1: Direct Substitution (Alkylation) of Free Hydrazine and Alkylhydrazines ............................................. 1135
40.7.1.1.1.1 Variation 1: Using Alkyl Halides ...................................... 1136
40.7.1.1.1.2 Variation 2: Using Alcohols .......................................... 1137
40.7.1.1.1.3 Variation 3: Using Cyclic Carboxylates (Lactones) ................. 1137
40.7.1.1.1.4 Variation 4: Using Alkyl Sulfonates .................................. 1138
40.7.1.1.1.5 Variation 5: Using Sultones .......................................... 1139
40.7.1.1.1.6 Variation 6: Using Dialkyl Sulfates .................................. 1139
40.7.1.1.1.7 Variation 7: Using Oxiranes .......................................... 1140
40.7.1.1.1.8 Variation 8: Using Thiiranes ......................................... 1141
40.7.1.1.1.9 Variation 9: Using Aziridines ........................................ 1141
40.7.1.1.1.10 Variation 10: Using Sulfones ....................................... 1142
40.7.1.1.1.11 Variation 11: Using Alkylamines .................................... 1143
40.7.1.1.1.12 Variation 12: Using Diazirenolates .................................. 1144
40.7.1.1.1.12 Variation 1: Using Alkenes ................................. 1144
40.7.1.1.1.2 Variation 2: Using Hydrazines ...................................... 1145
40.7.1.1.1.2 Variation 3: Using Hydrazides ...................................... 1145
40.7.1.1.1.2 Variation 3: Reductive Alkylation of Hydrazides .................. 1147
40.7.1.1.1.4 Variation 4: Alkylation of Azines .................................... 1147
40.7.1.1.1.5 Variation 5: Alkylation of tert-Butyl Isopropylidenehydrazinecarboxylate 1148
40.7.1.1.1.6 Variation 6: Alkylation of P,P-Diphenylphosphinic Hydrazide .......... 1150
40.7.1.1.1.7 Variation 7: Alkylation of Di-tert-butyl Hydrazine-1,2-dicarboxylate ... 1151
40.7.1.1.1.8 Variation 8: Alkylation of Tri-tert-butyl Hydrazine-1,1,2-tricarboxylate .. 1153
40.7.1.1.1.9 Variation 9: Alkylation of Orthogonally Triprotected Hydrazines ..... 1154
40.7.1.3 Method 3: Addition of Hydrazines to Activated Alkenes .......... 1155
40.7.1.4 Method 4: Reduction of Hydrazones .................................. 1158
40.7.1.4.1 Variation 1: Catalytic Hydrogenation ............................... 1158
40.7.1.4.2 Variation 2: Using Complex Hydrides .............................. 1159
40.7.1.5 Method 5: Reduction of Azines ........................................ 1161
40.7.1.5.1 Variation 1: Catalytic Hydrogenation ............................... 1161
40.7.1.5.2 Variation 2: Using Metals ........................................... 1162
40.7.1.5.3 Variation 3: Using Complex Hydrides .............................. 1162
40.7.1.6 Method 6: Reduction of Hydrazides .................................. 1163
40.7.1.7 Method 7: Addition of Organometallic Compounds to Hydrazones
(C-Alkylation) ........................................ 1165
40.7.1.7.1 Variation 1: Using Grignard Reagents ............................... 1165
40.7.1.7.2 Variation 2: Using Aryllithium Reagents ........................... 1166
40.7.1.7.3 Variation 3: Stereoselective Addition of Organometallic Compounds
(C-Alkylation) ...................... 1166
40.7.1.7.4 Variation 4: Stereoselective Addition of Radicals ................. 1168
40.7.1.8 Method 8: Reductive Coupling of Phenylhydrazones .................. 1168
40.7.1.9 Method 9: Amination of Amines ..................................... 1169
40.7.1.9.1 Variation 1: Using N-Chloro(alkyl)amines with Amines and Metalated
Amines .................................................. 1169
40.7.1.9.2 Variation 2: Using Hydroxylamine-O-sulfonic Acids ............... 1171
40.7.1.9.3 Variation 3: Using Oxaziridines .................................... 1171
40.7.1.10 Method 10: Amination of Amines via Diaziridines ................. 1172
40.7.1.10.1 Variation 1: Using Hydroxylamine-O-sulfonic Acid .............. 1172
40.7.1.10.2 Variation 2: Using Hypochlorite ................................... 1173
40.7.1.11 Method 11: Synthesis from Ureas ................................... 1174
40.7.1.12 Method 12: Synthesis from N-Alkylsulfamides ...................... 1175
40.7.1.13 Method 13: Synthesis from Phosphonic Acid Diamides ............. 1176
40.7.1.14 Method 14: Tetraalkylhydrazines by Anodic Oxidation of Secondary
Amine Anions ........................................... 1176
40.7.1.15 Method 15: Hydrolysis of Nitrogen Heterocycles .................... 1176
40.7.1.15.1 Variation 1: Of Dihydropyrazolium Compounds ................. 1177
40.7.1.15.2 Variation 2: Of Pyrazolidin-3-ones ................................ 1177
40.7.1.15.3 Variation 3: Of Diaziridines ....................................... 1178
40.7.1.15.4 Variation 4: Of Diaziridinones .................................... 1179
40.7.1.15.5 Variation 5: Of Sydnones ......................................... 1180
40.7.1.16 Method 16: Hydrolysis of Alkylhydrazones .......................... 1180
40.7.1.17 Method 17: Hydrolysis of Acylated Alkylhydrazines .................. 1181
40.7.1.18 Method 18: 1,1-Dialkylhydrazines by Reduction of DialkylNitrosamines ..... 1181
40.7.1.18.1 Variation 1: Using Catalytic Hydrogenation ........................ 1181
40.7.1.18.2 Variation 2: Using Metals .......................................... 1182
40.7.1.18.3 Variation 3: Using Complex Hydrides ............................. 1183
40.7.1.18.4 Variation 4: Using Metal Salts .................................... 1184
40.7.1.18.5 Variation 5: Using Sodium Bisulfite ................................ 1184
40.7.1.18.6 Variation 6: Electrochemical Reduction ............................ 1184
40.7.1.19 Method 19: Monoalkylhydrazines by Reduction of N-Alkyl-N-nitrosoureas 1185
40.7.1.20 Method 20: Monoalkylhydrazines by Reduction of N-Nitrosoamides 1185
40.7.1.21 Method 21: Monoalkylhydrazines by Reduction of N-Alkyl-N-nitrosohydroxylamines ...................... 1186

40.12 Product Class 12: N-Alkylsulfamic Acids and Derivatives
E. S. Sherman and S. R. Chemler

40.12.1 Product Subclass 1: N-Alkylsulfamoyl Halides .................................................................. 1285
40.12.1.1 Synthesis of Product Subclass 1 .................................................................................. 1285
40.12.1.1.1 Method 1: Synthesis of N-Alkylsulfamoyl Fluorides ........................................... 1285
40.12.1.1.1.1 Variation 1: From Amines and Sulfuryl Fluoride ............................................. 1285
40.12.1.1.1.2 Variation 2: From Amines and Sulfuryl Chloride Fluoride ................................ 1286
40.12.1.1.1.3 Variation 3: From N-Alkylsulfamoyl Chlorides .................................................. 1286
40.12.1.1.2 Method 2: Synthesis of N-Alkylsulfamoyl Chlorides ........................................... 1287
40.12.1.1.2.1 Variation 1: From N-Alkylsulfamic Acids and Phosphorus Pentachloride .................. 1287
40.12.1.1.2.2 Variation 2: From Amines and Sulfuryl Chloride ............................................. 1287
40.12.1.1.3 Method 3: Synthesis of N-Alkylsulfamoyl Bromides ........................................... 1288
40.12.2 Product Subclass 2: N-Alkylsulfamic Acids .................................................................. 1289
40.12.2.1 Synthesis of Product Subclass 2 .................................................................................. 1289
40.12.2.1.1 Method 1: Synthesis from Amines and Chlorosulfonic Acid ................................ 1289
40.12.2.1.2 Method 2: Synthesis by Aminolysis of Amine–Sulfur Trioxide Complexes .......... 1290
40.12.2.1.3 Method 3: Synthesis from Isocyanates and Sulfuric Acid ..................................... 1290
40.12.2.1.4 Method 4: Synthesis by Hydrolysis of Aryl Sulfamates ....................................... 1291
40.12.2.1.5 Method 5: Synthesis from N-Alkylsulfamoyl Chlorides ....................................... 1292
40.12.2.1.6 Method 6: Synthesis by Hydrolysis of Sulfamoyl Azides ....................................... 1292
40.12.3 Product Subclass 3: N-Alkylsulfamides .................................................................. 1292
40.12.3.1 Synthesis of Product Subclass 3 .................................................................................. 1293
40.12.3.1.1 Method 1: Synthesis of Linear Sulfamides .......................................................... 1293
40.12.3.1.1.1 Variation 1: From N-Alkylsulfamoyl Chlorides .................................................. 1293
40.12.3.1.1.2 Variation 2: From N-Alkylsulfamic Acid Esters .................................................. 1293
40.12.3.1.1.3 Variation 3: From Chlorosulfonyl Isocyanate .................................................... 1294
40.12.3.1.1.4 Variation 4: From N-Sulfamoyloxazolidinone Derivatives ................................ 1295
40.12.3.1.1.5 Variation 5: From Sulfamide and Amines .......................................................... 1297
40.12.3.1.2 Method 2: Synthesis of Cyclic Sulfamides .......................................................... 1297
40.12.3.1.2.1 Variation 1: From Amino Alcohols with Burgess-Type Reagents ...................... 1297
40.12.3.1.2.2 Variation 2: From Linear Sulfamides and Alkenes ............................................. 1299
40.12.3.1.2.3 Variation 3: From N,N-Dimethylsulfamoylzairidines and Amines ................... 1301
