## Table of Contents

### Introduction

S. A. Snyder

<b>Introduction</b> .....	1
---------------------------	---

### 1.1 Polyene Cyclizations

R. A. Shenvi and K. K. Wan

<b>1.1 Polyene Cyclizations</b> .....	13
<b>1.1.1 Cationic Polyene Cyclizations Mediated by Brønsted or Lewis Acids</b> .....	14
<b>1.1.1.1 Most Used Cationic Polyene Cyclization Methods</b> .....	15
<b>1.1.1.1.1 Polyene Cyclization via Biomimetic Heterolytic Opening of Epoxides by Alkylaluminum Lewis Acids</b> .....	15
<b>1.1.1.1.2 Polyene Cyclization Mediated by Carbophilic Lewis Acids</b> .....	17
<b>1.1.1.2 Recent Advances in Cationic Polycyclization: Halonium-Initiated Polycyclization</b>	17
<b>1.1.1.3 Other Common Cationic Polyene Cyclization Methods</b> .....	19
<b>1.1.1.3.1 Catalytic, Enantioselective, Protonative Polycyclization</b> .....	19
<b>1.1.1.3.1.1 Chiral Transfer from a Brønsted Acid</b> .....	19
<b>1.1.1.3.1.2 Chiral Transfer from (<i>R</i>)-2,2'-Dichloro-1,1'-bi-2-naphthol–Antimony(V) Chloride Complex</b> .....	19
<b>1.1.1.3.1.3 Chiral Transfer via Nucleophilic Phosphoramidites</b> .....	20
<b>1.1.1.3.2 Polyene Cyclization Initiated by Unsaturated Ketones and Mediated by Aluminum Lewis Acids</b> .....	21
<b>1.1.1.3.3 Gold-Mediated Enantioselective Polycyclization</b> .....	22
<b>1.1.1.3.4 Polycyclization Initiated by an Episulfonium Ion</b> .....	23
<b>1.1.1.3.5 Polycyclization Initiated by a <math>\pi</math>-Lewis Acidic Metal</b> .....	23
<b>1.1.1.3.6 Enantioselective Polyene Cyclization Mediated by Chiral Scalemic Iridium Complexes</b> .....	24
<b>1.1.1.3.7 Acyliminium-Initiated Polyene Cyclization Mediated by Thioureas</b> .....	24
<b>1.1.1.3.8 Tail-to-Head Polycyclization</b> .....	25
<b>1.1.2 Radical Polyene Cyclizations</b> .....	26
<b>1.1.2.1 Most Used Radical Polycyclization Methods</b> .....	26
<b>1.1.2.1.1 Cyclization of Mono- and Polyunsaturated <math>\beta</math>-Oxo Esters Mediated by Manganese(III) Acetate</b> .....	26
<b>1.1.2.1.2 Titanocene-Catalyzed Polycyclization</b> .....	27
<b>1.1.2.2 Recent Advances in Radical Polycyclization</b> .....	28
<b>1.1.2.2.1 Manganese- and Cobalt-Catalyzed Cyclization</b> .....	28

1.1.2.2.2	Manganese-Catalyzed Hydrogenative Polycyclization .....	29
1.1.2.2.3	Radical Isomerization, Cycloisomerization, and Retrocycloisomerization with a Cobalt–salen Catalyst .....	30
1.1.2.3	Other Examples of Radical Polycyclization .....	31
1.1.2.3.1	Radical Polycyclization via Photoinduced Electron Transfer .....	31
1.1.2.3.2	Polycyclization via Organo-SOMO Catalysis .....	31
1.1.2.3.3	Polyene Radical Cascades in Complex Molecule Synthesis .....	31
1.1.3	Polyene Cyclization via Reductive Elimination from a Metal Center or Metathesis .....	32
1.1.3.1	Most Used Polycyclization Methods via Reductive Elimination .....	32
1.1.3.1.1	Palladium Zipper Cyclization Cascades .....	32
1.1.3.1.2	Polycyclization Cascades via Metathesis .....	33
1.1.3.2	Other Polycyclization Methods via Reductive Elimination .....	34
1.1.3.2.1	Cyclization via $\pi$ -Allylpalladium Complexes .....	34
1.1.3.2.2	Palladium-Catalyzed Ene–Yne Cycloisomerization .....	35
1.1.3.2.3	Cycloisomerization in Complex Molecule Synthesis .....	35
1.1.4	Anionic Polyene Cyclizations .....	36
1.1.4.1	Examples of Anionic Polyene Cyclizations .....	37
1.1.4.1.1	Stereoselective Polycyclization via Intramolecular Diels–Alder Cycloaddition Followed by Aldol Condensation .....	37
1.1.4.1.2	Transannular Double Michael Cyclization Cascades .....	38
1.2	<b>Cation–<math>\pi</math> Cyclizations of Epoxides and Polyepoxides</b> K. W. Armbrust, T. Halkina, E. H. Kelley, S. Sittihan, and T. F. Jamison	
1.2	<b>Cation–<math>\pi</math> Cyclizations of Epoxides and Polyepoxides</b> .....	43
1.2.1	<i>exo</i> -Selective Polyepoxide Cascades .....	43
1.2.1.1	Brønsted Acid Promoted Cascades .....	43
1.2.1.2	Brønsted Base Promoted Cascades .....	45
1.2.1.3	Oxocarbenium-Initiated Cascades via Photooxidative Cleavage .....	46
1.2.2	<i>endo</i> -Selective Polyepoxide Cascades .....	47
1.2.2.1	Lewis Acid Activation .....	47
1.2.2.1.1	Alkyl-Directed Cascades .....	47
1.2.2.2	Brønsted Base Activation .....	51
1.2.2.2.1	Trimethylsilyl-Directed Cascades .....	51
1.2.2.3	Distal Electrophilic Activation .....	52
1.2.2.3.1	Bromonium-Initiated Cascades .....	52
1.2.2.3.2	Oxocarbenium-Initiated Cascades via Photooxidative Cleavage .....	54

1.2.2.3.3	Carbocation-Initiated Cascades via Halide Abstraction .....	55
1.2.2.4	Water-Promoted Cascades .....	56
1.2.2.4.1	Cascades of Diepoxides Templated by a Tetrahydropyran .....	56
1.2.2.4.2	Cascades of Diepoxides Templated by a Dioxane .....	57
1.2.2.4.3	Cascades of Triepoxides Templated by a Tetrahydropyran .....	57
1.2.3	Epoxide Cascades with C—C $\pi$ Bonds .....	58
1.2.3.1	Cascades Terminated by Alkenes and Alkynes .....	58
1.2.3.2	Cascades Terminated by Arenes .....	60
1.2.3.3	Cascades Terminated by Protected Phenols .....	63
<b>1.3</b>	<b>Metathesis Reactions</b>	
<hr/>		
<b>1.3.1</b>	<b>Enyne-Metathesis-Based Domino Reactions in Natural Product Synthesis</b> D. Lee and M. O'Connor	
<hr/>		
<b>1.3.1</b>	<b>Enyne-Metathesis-Based Domino Reactions in Natural Product Synthesis</b>	67
1.3.1.1	Mechanism .....	71
1.3.1.1.1	Alkylidene Carbene Catalyzed Reactions .....	71
1.3.1.1.2	$\pi$ -Lewis Acid Catalyzed Reactions .....	75
1.3.1.1.3	Metallotropic [1,3]-Shift .....	75
1.3.1.2	Selectivity .....	76
1.3.1.2.1	Regioselectivity in Cross Metathesis .....	76
1.3.1.2.2	<i>exo/endo</i> -Mode Selectivity in Ring-Closing Metathesis .....	78
1.3.1.2.3	Stereoselectivity in Cross Metathesis and Ring-Closing Metathesis .....	79
1.3.1.2.4	Regioselectivity in Metallotropic [1,3]-Shift .....	80
1.3.1.3	Applications in Natural Product Synthesis .....	86
1.3.1.3.1	Simple Enyne Metathesis .....	88
1.3.1.3.1.1	Enyne Cross Metathesis .....	88
1.3.1.3.1.2	Enyne Ring-Closing Metathesis for Small Rings .....	92
1.3.1.3.2	Domino Enyne Metathesis .....	99
1.3.1.3.2.1	Double Ring-Closing Metathesis with Dienynes .....	99
1.3.1.3.2.2	Domino Ring-Closing Metathesis/Cross Metathesis, Cross Metathesis/ Ring-Closing Metathesis, and Cross Metathesis/Cross Metathesis Sequences	112
1.3.1.3.3	Enyne Metathesis/Metallotropic [1,3]-Shift Sequences .....	120
1.3.1.3.4	Enyne Metathesis/Diels–Alder Reaction Sequences .....	123
1.3.1.3.5	Enyne Metathesis with $\pi$ -Lewis Acids .....	128
1.3.1.4	Conclusions .....	130

<b>1.3.2</b>	<b>Domino Metathesis Reactions Involving Carbonyls</b> H. Renata and K. M. Engle	
<hr/>		
<b>1.3.2</b>	<b>Domino Metathesis Reactions Involving Carbonyls</b> .....	135
<b>1.3.2.1</b>	Two-Pot Reactions .....	136
<b>1.3.2.1.1</b>	Reaction with In Situ Generated Titanium–Alkylidene Complexes Followed by Metathesis .....	137
<b>1.3.2.2</b>	One-Pot Reactions .....	139
<b>1.3.2.2.1</b>	Reaction with Bis( $\eta^5$ -cyclopentadienyl)methylenetitanium(IV)-Type Complexes .....	139
<b>1.3.2.2.2</b>	Reaction with In Situ Generated Titanium–Alkylidene Complexes .....	143
<b>1.3.2.2.3</b>	Reaction with Stoichiometric Molybdenum or Tungsten Complexes .....	148
<b>1.3.2.2.4</b>	Organocatalytic Reactions .....	150
<b>1.4</b>	<b>Radical Reactions</b>	
<hr/>		
<b>1.4.1</b>	<b>Peroxy Radical Additions</b> X. Hu and T. J. Maimone	
<hr/>		
<b>1.4.1</b>	<b>Peroxy Radical Additions</b> .....	157
<b>1.4.1.1</b>	Initiation from a Preexisting Hydroperoxide .....	157
<b>1.4.1.1.1</b>	Using Peroxide Initiators .....	158
<b>1.4.1.1.2</b>	Using Copper(II) Trifluoromethanesulfonate/Oxygen .....	161
<b>1.4.1.1.3</b>	Using Samarium(II) Iodide/Oxygen .....	162
<b>1.4.1.2</b>	Initiation by Metal-Catalyzed Hydroperoxidation .....	163
<b>1.4.1.2.1</b>	The Mukaiyama Hydration/Hydroperoxidation .....	163
<b>1.4.1.2.2</b>	Hydroperoxidation-Initiated Domino Transformations .....	164
<b>1.4.1.2.3</b>	Manganese-Catalyzed Domino Hydroperoxidation .....	166
<b>1.4.1.3</b>	Initiation by Radical Addition/Oxygen Quenching .....	168
<b>1.4.1.3.1</b>	Thiyl Radical Initiation .....	168
<b>1.4.1.3.1.1</b>	Thiol–Alkene Co-oxygenation Reactions .....	168
<b>1.4.1.3.1.2</b>	Domino Transformations of Vinylcyclopropanes .....	171
<b>1.4.1.3.2</b>	Carbon-Centered Radical Additions .....	173
<b>1.4.1.3.2.1</b>	By C–H Abstraction .....	174
<b>1.4.1.3.2.2</b>	Manganese(III)-Mediated Oxidation of 1,3-Dicarbonyls .....	175
<b>1.4.1.4</b>	Heteroatom Oxidation/Cyclopropane Cleavage Pathways .....	177
<b>1.4.1.5</b>	Radical Cation Intermediates .....	178
<b>1.4.1.5.1</b>	1,2-Diarylcyclopropane Photooxygenation .....	179
<b>1.4.1.5.2</b>	Alkene/Oxygen [2 + 2 + 2] Cycloaddition .....	180

<b>1.4.2</b>	<b>Radical Cyclizations</b>	
	J. J. Devery, III, J. J. Douglas, and C. R. J. Stephenson	
<hr/>		
<b>1.4.2</b>	<b>Radical Cyclizations</b> .....	187
<b>1.4.2.1</b>	Tin-Mediated Radical Cyclizations .....	188
<b>1.4.2.1.1</b>	Tin-Mediated Synthesis of Hexahydrofurofurans .....	188
<b>1.4.2.1.2</b>	Tin-Mediated Radical [3 + 2] Annulation .....	191
<b>1.4.2.2</b>	Reductive Radical Domino Cyclizations .....	193
<b>1.4.2.2.1</b>	Samarium(II) Iodide Mediated Radical Cyclizations .....	193
<b>1.4.2.2.2</b>	Samarium(II) Iodide Mediated Radical–Anionic Cyclizations .....	196
<b>1.4.2.3</b>	Oxidative Radical Cyclizations .....	198
<b>1.4.2.3.1</b>	Organo-SOMO-Activated Polyene Cyclization .....	198
<b>1.4.2.3.2</b>	Oxidative Rearrangement of Silyl Bis(enol ethers) .....	201
<b>1.4.2.3.3</b>	Diastereoselective Oxidative Rearrangement of Silyl Bis(enol ethers) .....	204
<b>1.4.2.4</b>	Visible-Light-Mediated Reactions .....	207
<b>1.4.2.4.1</b>	Light-Mediated Radical Cyclization/Divinylcyclopropane Rearrangement .....	207
<b>1.4.2.4.2</b>	Visible-Light-Mediated Radical Fragmentation and Bicyclization .....	211
<b>1.4.3</b>	<b>Tandem Radical Processes</b>	
	K. A. Parker	
<hr/>		
<b>1.4.3</b>	<b>Tandem Radical Processes</b> .....	217
<b>1.4.3.1</b>	General and Specialized Reviews on Radical Cyclization Reactions .....	217
<b>1.4.3.2</b>	A Brief History of Tandem Radical Cyclization Chemistry .....	218
<b>1.4.3.2.1</b>	The Tandem Radical Cyclization Concept: Fused Rings .....	218
<b>1.4.3.2.2</b>	The Biomimetic Tandem Radical Cyclization Postulate .....	219
<b>1.4.3.2.3</b>	A Vinyl Radical Tandem Radical Cyclization: A Product with Linked Rings .....	219
<b>1.4.3.2.4</b>	Introduction to Selectivity: A Bridged Ring System .....	220

<b>1.5.1</b>	<b>Protic Acid/Base Induced Reactions</b> .....	243
1.5.1.1	Intramolecular Epoxide-Opening Cyclizations .....	244
1.5.1.1.1	Protic Acid Induced Intramolecular Epoxide Openings .....	245
1.5.1.1.1.1	<i>exo</i> Epoxide Ring Expansions .....	246
1.5.1.1.1.2	<i>endo</i> Epoxide Ring Expansions .....	248
1.5.1.1.2	Base-Induced Intramolecular Epoxide Openings .....	250
1.5.1.2	Carbocyclic Ring Expansions/Ring Contractions .....	252
1.5.1.2.1	Acid-Induced Carbocyclic Ring Expansions/Ring Contractions .....	252
1.5.1.2.1.1	Wagner–Meerwein Rearrangements .....	254
1.5.1.2.1.1.1	Ring-Expansion Rearrangements .....	254
1.5.1.2.1.1.2	Ring-Contraction Rearrangements .....	255
1.5.1.2.1.2	Pinacol Rearrangements .....	256
1.5.1.2.1.3	Semipinacol Rearrangements .....	258
1.5.1.2.2	Base-Induced Carbocyclic Ring Expansions/Ring Contractions .....	259
1.5.1.2.2.1	Benzilic Acid Rearrangements .....	259
1.5.1.2.2.2	Retro-Benzilic Acid Rearrangements .....	260
1.5.1.2.2.3	Favorskii Rearrangements .....	261
1.5.1.2.2.3.1	Homo-Favorskii Rearrangements .....	263
1.5.1.2.2.4	$\alpha$ -Hydroxy Ketone Rearrangements .....	263

<b>1.5.2</b>	<b>Lewis Acid/Base Induced Reactions</b> S.-H. Wang, Y.-Q. Tu, and M. Tang	
<hr/>		
<b>1.5.2</b>	<b>Lewis Acid/Base Induced Reactions</b> .....	269
<b>1.5.2.1</b>	Ring Expansions .....	269
<b>1.5.2.1.1</b>	Semipinacol Rearrangement of 2,3-Epoxy Alcohols and Their Derivatives .....	269
<b>1.5.2.1.2</b>	Reductive Rearrangement of 2,3-Epoxy Alcohols with Aluminum Triisopropoxide .....	272
<b>1.5.2.1.3</b>	Tandem Semipinacol/Schmidt Reaction of $\alpha$ -Siloxy Epoxy Azides .....	273
<b>1.5.2.1.4</b>	Prins–Pinacol Rearrangement .....	277
<b>1.5.2.2</b>	Ring Contractions .....	282
<b>1.5.2.2.1</b>	Rearrangement of Epoxides .....	282
<b>1.5.2.2.2</b>	Favorskii Rearrangement and Quasi-Favorskii Rearrangement .....	286
<b>1.5.2.3</b>	Ring Closures .....	289
<b>1.5.2.3.1</b>	Induction by an Electrophilic Step .....	289
<b>1.5.2.3.1.1</b>	Initiation by Epoxide Ring Opening .....	290
<b>1.5.2.3.1.1.1</b>	Termination with a Carbon Nucleophile .....	290
<b>1.5.2.3.1.1.2</b>	Termination with an Oxygen Nucleophile .....	297
<b>1.5.2.3.1.1.3</b>	Termination with a Rearrangement .....	300
<b>1.5.2.3.1.1.4</b>	Termination with a Pericyclic Reaction .....	305
<b>1.5.2.3.1.2</b>	Initiation with a Carbonyl and Its Derivatives .....	306
<b>1.5.2.3.1.2.1</b>	Termination with a Nucleophile .....	307
<b>1.5.2.3.1.2.2</b>	Termination with a Rearrangement .....	316
<b>1.5.2.3.1.3</b>	Initiation by Activation of a $\pi$ -Bond .....	318
<b>1.5.2.3.1.3.1</b>	Initiation by a Lewis Acid .....	318
<b>1.5.2.3.1.3.2</b>	Initiation by a $\pi$ -Acid .....	321
<b>1.5.2.3.1.3.2.1</b>	Activation of Alkenes .....	321
<b>1.5.2.3.1.3.2.2</b>	Activation of Alkynes .....	328
<b>1.5.2.3.2</b>	Induction by a Pericyclic Reaction .....	338
<b>1.5.2.3.3</b>	Induction by a Nucleophilic Step .....	344
<b>1.5.3</b>	<b>Brook Rearrangement as the Key Step in Domino Reactions</b> A. Kirschning, F. Gille, and M. Wolling	
<hr/>		
<b>1.5.3</b>	<b>Brook Rearrangement as the Key Step in Domino Reactions</b> .....	355
<b>1.5.3.1</b>	1,2-Brook Rearrangement .....	356
<b>1.5.3.1.1</b>	1,2-Brook Rearrangement with Aldehydes, Ketones, or Acyl Chlorides .....	356

1.5.3.1.2	1,2-Brook Rearrangement with Acylsilanes .....	358
1.5.3.1.2.1	Domino Reactions of Acylsilanes by Addition of Nucleophiles .....	358
1.5.3.1.2.2	Domino Reactions of Acylsilanes Initiated by Nucleophiles Acting as Catalysts .....	377
1.5.3.1.2.3	Domino Reactions of Acylsilanes Initiated by Enolization .....	380
1.5.3.1.3	1,2-Brook Rearrangement with $\alpha$ -Silyl Carbinols .....	381
1.5.3.1.4	1,2-Brook Rearrangement with Epoxy Silanes .....	382
1.5.3.1.5	Miscellaneous Examples of 1,2-Brook Rearrangement .....	386
1.5.3.1.6	Retro-1,2-Brook Rearrangement .....	387
1.5.3.2	1,3-Brook Rearrangement .....	392
1.5.3.2.1	Addition of Silyl-Substituted Stabilized Organolithium Agents to Carbonyl Groups .....	393
1.5.3.2.2	1,3-Brook Rearrangement at $sp^2$ -Hybridized Carbon Atoms .....	399
1.5.3.2.3	1,3-Brook Rearrangement Accompanied by $\beta$ -Elimination .....	399
1.5.3.2.4	Carbon to Nitrogen Rearrangement .....	400
1.5.3.2.5	Carbon to Sulfur Rearrangement .....	401
1.5.3.2.6	Retro-1,3-Brook Rearrangement .....	402
1.5.3.3	1,4-Brook Rearrangement .....	403
1.5.3.3.1	1,4-Brook Rearrangement of Silyl-Substituted Carbanions with Epoxides .....	404
1.5.3.3.2	1,4-Brook Rearrangement with Dihalosilyl-Substituted Methyllithium .....	416
1.5.3.3.3	1,4-Brook Rearrangement with Allylsilanes .....	417
1.5.3.3.4	1,4-Brook Rearrangement with Silylated Benzaldehydes .....	422
1.5.3.3.5	1,4-Brook Rearrangement with Vinylsilanes .....	426
1.5.3.3.6	Sulfur to Oxygen Rearrangement .....	430
1.5.3.3.7	Retro-1,4-Brook Rearrangement .....	431
1.5.3.4	Applications in the Total Synthesis of Natural Products .....	432
1.5.3.4.1	The 1,2-Brook Rearrangement in Natural Product Synthesis .....	432
1.5.3.4.2	The 1,4-Brook Rearrangement in Natural Product Synthesis .....	433
1.5.3.4.2.1	Synthesis of Polyketides .....	433
1.5.3.4.2.2	Synthesis of Terpenes .....	442
1.5.3.4.2.3	Synthesis of Alkaloids .....	442

<b>1.6.1.2</b>	Reactions Initiating with Arylpalladium Species .....	473
<b>1.6.1.3</b>	Reactions Initiating with Allylpalladium Intermediates .....	491
<b>1.6.1.4</b>	Reactions Initiating with Allenylpalladium Intermediates .....	496
<b>1.6.1.5</b>	Reactions Initiating with Alkylpalladium Intermediates .....	498
<b>1.6.1.6</b>	Conclusions .....	505
<b>1.6.2</b>	<b>Dirhodium-Catalyzed Domino Reactions</b> X. Xu, P. Truong, and M. P. Doyle	
<b>1.6.2</b>	<b>Dirhodium-Catalyzed Domino Reactions</b> .....	511
<b>1.6.2.1</b>	1-Sulfonyl-1,2,3-triazoles as (Azavinyl)carbene Precursors in Domino Reactions	512
<b>1.6.2.2</b>	Dirhodium(II)-Catalyzed Generation of Rhodium–Carbenes from Cyclopropenes and Their Subsequent Reactions .....	516
<b>1.6.2.3</b>	Dirhodium(II)-Catalyzed Carbene/Alkyne Metathesis .....	521
<b>1.6.2.4</b>	Nitrene Cascade Reactions Catalyzed by a Dirhodium Complex .....	527
<b>1.6.2.5</b>	Conclusions .....	532
<b>1.6.3</b>	<b>Gold-Mediated Reactions</b> E. Merino, A. Salvador, and C. Nevado	
<b>1.6.3</b>	<b>Gold-Mediated Reactions</b> .....	535
<b>1.6.3.1</b>	Gold-Catalyzed Annulations .....	535
<b>1.6.3.1.1</b>	Using <i>ortho</i> -Alkynylbenzaldehydes .....	535
<b>1.6.3.1.2</b>	Using Arylimines and Alkynes .....	538
<b>1.6.3.1.3</b>	Using Alcohols and Dienes .....	538
<b>1.6.3.1.4</b>	Using Carbonyl Compounds, Alkynes, and Nitrogen-Containing Compounds	540
<b>1.6.3.2</b>	Gold-Catalyzed Domino Reactions via Addition of Carbon Nucleophiles to $\pi$ -Electrophiles .....	542
<b>1.6.3.2.1</b>	1, <i>n</i> -Enynes .....	542
<b>1.6.3.2.2</b>	1, <i>n</i> -Diyne .....	545
<b>1.6.3.2.3</b>	1, <i>n</i> -Allenenes .....	549
<b>1.6.3.2.4</b>	1, <i>n</i> -Allenynes .....	550

1.6.3.3	Gold-Catalyzed Domino Reactions via Addition of Heteroatom Nucleophiles to $\pi$ -Electrophiles	551
1.6.3.3.1	Addition of Nitrogen Nucleophiles to Alkynes	551
1.6.3.3.2	Addition of Oxygen Nucleophiles to Alkynes and Allenes	552
1.6.3.3.2.1	Alcohols as Nucleophiles	552
1.6.3.3.2.2	Epoxides as Nucleophiles	553
1.6.3.3.3	Addition of Heteroatom Nucleophiles to Alkenes	555
1.6.3.4	Gold-Catalyzed Domino Reactions Involving the Rearrangement of Propargyl Esters	557
1.6.3.4.1	Synthesis of $\alpha$ -Ylidene $\beta$ -Diketones	557
1.6.3.4.2	Synthesis of Dienes	558
1.6.3.4.3	Synthesis of $\alpha$ -Substituted Enones	561
1.6.3.4.3.1	Synthesis of $\alpha$ -Halo-Substituted Enones	561
1.6.3.4.3.2	Synthesis of $\alpha$ -Aryl-Substituted Enones	562
1.6.3.4.4	Synthesis of Cyclopentenones	563
1.6.3.4.5	Acetate Migration and Reaction with $\pi$ -Electrophiles	564
1.6.3.4.5.1	Acetate Migration and Reaction with Alkynes	564
1.6.3.4.5.2	Acetate Migration and Reaction with Alkenes	565
1.6.3.4.6	Acetate Migration and Ring-Opening Reactions	566
1.6.3.4.6.1	Cyclopentannulations	566
1.6.3.4.6.2	Cyclohexannulations	568
1.6.3.4.6.3	Cycloheptannulations	569
1.6.4	<b>Rare Earth Metal Mediated Domino Reactions</b> T. Ohshima	
1.6.4	<b>Rare Earth Metal Mediated Domino Reactions</b>	577
1.6.4.1	Addition to C=O or C=C—C=O as a Primary Step	578
1.6.4.1.1	Aldol-Type Reactions	578
1.6.4.1.2	1,4-Addition Reactions	582
1.6.4.2	Addition to C=N or C=C—C=N as a Primary Step	583
1.6.4.2.1	Strecker-Type Reactions	583
1.6.4.2.2	Other Reactions Initiated by Imine Formation	584
1.6.4.3	Enamine Formation as a Primary Step	589
1.6.4.3.1	Enamines from $\beta$ -Keto Esters	589
1.6.4.3.2	Enamines from Alkynes	590
1.6.4.4	Ring-Opening or Ring-Closing Reactions as a Primary Step	592
1.6.4.4.1	Ring-Opening Reactions	592

1.6.4.4.2	Ring-Closing Reactions	594
1.6.4.5	Rearrangement Reactions	596
1.6.4.6	Miscellaneous Reactions	598
1.6.4.6.1	Domino Reactions with Transition-Metal Catalysts	598
1.6.5	<b>Cobalt and Other Metal Mediated Domino Reactions: The Pauson–Khand Reaction and Its Use in Natural Product Total Synthesis</b> L. Shi and Z. Yang	
1.6.5	<b>Cobalt and Other Metal Mediated Domino Reactions: The Pauson–Khand Reaction and Its Use in Natural Product Total Synthesis</b>	601
1.6.5.1	Enyne-Based Pauson–Khand Reactions	606
1.6.5.1.1	A Short Synthesis of Racemic 13-Deoxyserratine	606
1.6.5.1.2	Total Synthesis of Paecilomycine A	606
1.6.5.1.3	Stereoselective Total Syntheses of (–)-Magellanine, (+)-Magellaninone, and (+)-Paniculatine	607
1.6.5.1.4	Concise, Enantioselective Total Synthesis of (–)-Alstonerine	608
1.6.5.1.5	Pauson–Khand Approach to the Hamigerans	609
1.6.5.1.6	Enantioselective Synthesis of (–)-Pentalenene	610
1.6.5.1.7	Formal Synthesis of (+)-Nakadomarin A	611
1.6.5.1.8	Diastereoselective Total Synthesis of Racemic Schindilactone A	612
1.6.5.1.9	Asymmetric Total Synthesis of (–)-Huperzine Q	614
1.6.5.1.10	Total Synthesis of (–)-Jiadifenin	615
1.6.5.1.11	Total Synthesis of Penostatin B	617
1.6.5.1.12	Total Synthesis of Racemic Pentalenolactone A Methyl Ester	617
1.6.5.1.13	Asymmetric Total Synthesis of (+)-Fusarisetin A	618
1.6.5.2	Heteroatom-Based Pauson–Khand Reaction	619
1.6.5.2.1	Total Synthesis of Physostigmine	620
1.6.5.2.2	Asymmetric Total Synthesis of Racemic Merrilactone A	621
1.6.5.3	Allenic Pauson–Khand Reaction	622
1.6.5.3.1	Total Synthesis of (+)-Achalensolide	623
1.6.5.3.2	Synthesis of 6,12-Guaianolide	624
1.6.5.3.3	Stereoselective Total Syntheses of Uncommon Sesquiterpenoids	625
1.6.5.3.4	14-Step Synthesis of (+)-Ingenol from (+)-3-Carene	626
1.6.5.4	Conclusions	627
