

Click Chemistry

	Preface	V
	Abstracts	IX
	Table of Contents	XXI
1	Introduction	
	F. P. J. T. Rutjes ^{1a}	1
2	Copper-Catalyzed Azide–Alkyne Cycloaddition (CuAAC)	3
2.1	Introduction to CuAAC	
	F. F. Ort and F. P. J. T. Rutjes ^{1a}	3
2.2	CuAAC in Peptidomimetics and Protein Mimics	
	T. J. Meuleman and R. M. J. Liskamp ^{1a}	39
2.3	CuAAC in Protein Conjugation	
	A. La Venia, A. Kovalová, and M. Vrabel ^{1a}	95
2.4	CuAAC in Carbohydrate Conjugation	
	A. K. Agrahari, A. Mishra, and V. K. Tiwari ^{1a}	135
2.5	CuAAC and Metal-Free 1,3-Dipolar Huisgen Cycloadditions in Drug Discovery	
	K. M. Kacprzak, I. Skiera, and J. Rutkowski	181
2.6	CuAAC Applications in Macromolecules, Polymers, Nanoparticles, and Supramolecular Chemistry	
	C. Zhang, K. M. Page, and J. C. M. van Hest ^{1a}	261
3	Ruthenium-Catalyzed Azide–Alkyne Cycloaddition (RuAAC)	
	A. J. Paterson, ^{1a} T. Beke-Somfai, ^{1a} and N. Kann ^{1a}	289
4	Metal-Free Click Reactions between 1,3-Dipoles and Alkynes/Alkenes ...	337
4.1	Strain-Promoted Azide–Alkyne Cycloaddition (SPAAC): Background, Substrate Preparation, and Reactivity	
	T. Harris ^{1a} and I. V. Alabugin ^{1a}	337
4.2	Applications of SPAAC and SPANC in Life Sciences	
	L. J. N. Janssen and D. Blanco-Ania ^{1a}	379
4.3	1,3-Dipolar Cycloadditions of Alkenes	
	D. Svatunek ^{1a} and K. N. Houk ^{1a}	407

5	Sulfur Fluoride Exchange (SuFEx) M.-C. Giel, C. J. Smedley, and J. E. Moses	435
6	Thiol-Based Click Reactions	485
6.1	Thiol–Ene/Yne Click Reactions: A Powerful Tool Toward Diversity-Oriented Synthesis A. K. Sinha and R. Singh	485
6.2	Hybridization of Thiol–Ene Chemistry Hydrogels for Biomedical Applications Z. Xu and K. M. Bratlie	559
7	Tetrazine-Based Cycloadditions in Click Chemistry W. Kuba, M. Wilkovitsch, J. C. T. Carlson, and H. Mikula	577
8	Sydnone-Based Cycloadditions in Click Chemistry F. Friscourt	641
	Author Index	661
	Abbreviations	707

Table of Contents

1	Introduction F. P. J. T. Rutjes 	
1	Introduction	1
2	Copper-Catalyzed Azide–Alkyne Cycloaddition (CuAAC)	
2.1	Introduction to CuAAC F. F. Ort and F. P. J. T. Rutjes 	
2.1	Introduction to CuAAC	3
2.1.1	Origin of the CuAAC Reaction	3
2.1.2	Impact of Transition Metals	4
2.1.3	Current View of the General Mechanism of CuAAC	5
2.1.4	General Procedures for CuAAC-Driven Synthesis of Triazoles	6
2.1.5	Overview of the Properties of 1,2,3-Triazoles	8
2.1.5.1	Applications of 1,2,3-Triazoles in Medicinal Chemistry and as Amide-Bond Surrogates	10
2.1.6	Strategies and Guidelines for the Preparation of Azide and Alkyne CuAAC Reactants	11
2.1.6.1	Introducing the Azide Moiety, and Practical Considerations and Precautions When Using Azide Compounds	11
2.1.6.2	Introducing the Alkyne Moiety, and Practical Considerations When Using Alkynes	13
2.1.7	Reaction Conditions for CuAAC: Parameters for a Versatile Reaction	15
2.1.7.1	Azide Substrates for CuAAC	16
2.1.7.1.1	General Azide Substrate Scope	16
2.1.7.1.2	Effect of Electron-Deficient Azide Substrates: Acyl, Phosphoryl, and Sulfonyl Azides	18
2.1.7.2	Alkyne Substrates for CuAAC	19
2.1.7.2.1	General Alkyne Substrate Scope	19
2.1.7.2.2	Electron-Deficient Alkyne Substrates	20
2.1.7.2.3	Iodoalkynes: Application in CuAAC	20
2.1.7.3	Copper(I) Sources for CuAAC	22
2.1.7.3.1	Copper(II) Salts as Source of Copper(I)	22
2.1.7.3.1.1	Copper(II) Sulfate with Sodium Ascorbate	22
2.1.7.3.1.2	Copper(II) Acetate	23
2.1.7.3.1.3	Photoinduced CuAAC/Electroinduced CuAAC	23

2.1.7.3.2	Copper(I) Salts as Source of Copper(I)	24
2.1.7.3.2.1	Copper(I) Halides	24
2.1.7.3.2.2	Alternative Copper(I) Complexes	26
2.1.7.3.3	Heterogeneous Copper Catalysts	26
2.1.7.3.3.1	Metallic Copper	26
2.1.7.3.3.2	Heterogeneous Copper Catalyst Supports	27
2.1.7.4	Influence of Ligands on CuAAC	29
2.1.7.4.1	Nitrogen Ligands	30
2.1.7.4.2	Phosphorus Ligands	31
2.1.7.4.3	Sulfur Ligands	32
2.2	CuAAC in Peptidomimetics and Protein Mimics	
	T. J. Meuleman and R. M. J. Liskamp 	
2.2	CuAAC in Peptidomimetics and Protein Mimics	39
2.2.1	Structural Mimics of Peptide Functional Groups	39
2.2.1.1	Amide-Bond Mimicry by the Triazole Moiety	39
2.2.1.1.1	Synthesis of Peptide Backbone Amide-to-Triazole Substitution	43
2.2.1.1.1.1	Solid-Phase Peptide Synthesis (SPPS)	43
2.2.1.1.1.2	CuAAC on the Backbone of a Growing Peptide Chain	44
2.2.1.1.1.3	Synthesis of Triazole-Dipeptide Precursors by CuAAC and Subsequent Use in SPPS	45
2.2.1.1.1.4	Synthesis of α -Amino Alkyne Analogues	46
2.2.1.1.1.4.1	Seyferth–Gilbert Homologation	46
2.2.1.1.1.4.2	Corey–Fuchs Reaction	47
2.2.1.1.1.4.3	Synthesis of α -Amino Alkyne Analogues via a Chiral Auxiliary	48
2.2.1.2	Disulfide-Bridge Mimicry	49
2.2.1.2.1	Synthesis of Triazole-Bridged Peptidomimetics	53
2.2.2	3D-Structure Stabilization	54
2.2.2.1	Structural Mimicry of the Glycopeptide Vancomycin by Introduction of Triazole Moieties	54
2.2.2.2	The Triazole Moiety as a Conformational Constraint for an α -Helix Structure	59
2.2.2.2.1	α -Helical Stabilization by Amide-to-Triazole Exchange in the Peptide Backbone	59
2.2.2.2.2	α -Helical Stabilization by CuAAC of the Side Chains	62
2.2.2.3	The Triazole Moiety as a Conformational Constraint for a β -Turn Structure	65

2.2.2.4	CuAAC-Induced Cyclization of Peptides and CuAAC-Induced Scaffolding of Cyclized Peptides	69
2.2.2.4.1	Intramolecular versus Intermolecular Cyclization	69
2.2.2.4.2	CuAAC-Induced Scaffolding of Cyclized Peptides	75
2.2.3	Protein Mimicry	78
2.2.3.1	Synthetic Vaccines	78
2.2.3.2	Synthetic Antibodies	85
2.2.4	Conclusions	89

2.3 CuAAC in Protein Conjugation

A. La Venia, A. Kovalová, and M. Vrabel 

2.3	CuAAC in Protein Conjugation	95
2.3.1	Modification and Labeling of Peptides	96
2.3.1.1	Incorporation of Azide and Alkyne Functionalities into Peptides	97
2.3.1.2	Modification of Peptides for Biomedical Applications	99
2.3.1.3	Preparation of Glycopeptides	103
2.3.1.4	Peptide Cyclization	108
2.3.2	Modification and Labeling of Proteins	111
2.3.2.1	Incorporation of Azido and Alkynyl Amino Acids into Proteins	112
2.3.2.2	Analysis of Newly Synthesized Proteins in Cells and Animals	113
2.3.2.3	Labeling of Proteins with Fluorophores	115
2.3.2.4	Protein Glycosylation	119
2.3.2.5	Modification of Proteins for Biomedical Applications	119
2.3.2.6	Protein PEGylation	122
2.3.2.7	Protein–Oligonucleotide Conjugation	123
2.3.2.8	Protein–Protein Conjugation	124
2.3.3	Conclusions	126

2.4 CuAAC in Carbohydrate Conjugation

A. K. Agrahari, A. Mishra, and V. K. Tiwari 

2.4	CuAAC in Carbohydrate Conjugation	135
2.4.1	Intermolecular CuAAC Click Conjugation of Carbohydrates	136
2.4.2	Intramolecular CuAAC Carbo-Click Reactions: Development of Carbohydrate-Containing Macrocycles with Triazole as Spacer	170
2.4.3	Conclusions and Future Perspectives	176

2.5	CuAAC and Metal-Free 1,3-Dipolar Huisgen Cycloadditions in Drug Discovery	
	K. M. Kacprzak, I. Skiera, and J. Rutkowski	
<hr/>		
2.5	CuAAC and Metal-Free 1,3-Dipolar Huisgen Cycloadditions in Drug Discovery	181
2.5.1	Characteristics of 1,2,3-Triazoles: A Medicinal Chemistry Perspective	183
2.5.2	Current Drugs and Drug Candidates Containing 1,2,3-Triazoles	184
2.5.3	In Situ Click Chemistry Assembly by Enzymes (Kinetic Target Guided Synthesis, KTGS)	189
2.5.3.1	In Situ Click Chemistry: Experiment Design	193
2.5.3.2	In Situ Click Chemistry in Other Biopolymers	203
2.5.3.3	Click Chemistry and Fragment-Based Drug Discovery (FBDD)	210
2.5.4	Combinatorial Synthesis of 1,2,3-Triazole Libraries and High-Throughput Screening for New Lead Discovery	214
2.5.4.1	Smart Libraries	216
2.5.4.2	Rational/Smart Combinatorial Approach: Warhead Designed Based on Existing Drug or Modelling Studies	217
2.5.4.3	Random Combinatorial Approach to Leads	225
2.5.4.4	Solid-Phase Combinatorial Click Libraries toward New Bioactivities	226
2.5.5	Natural Products and Old-Drug Modification by Click Chemistry as a Source of New Leads	228
2.5.5.1	Replacement of Linkages by Triazoles	229
2.5.5.1.1	1,2,3-Triazole as a Bioisostere of an Amide Bond	229
2.5.5.1.2	Replacement of Other Linkages by 1,2,3-Triazoles	231
2.5.5.2	Derivatization and Linking (Conjugation) by Click Chemistry	234
2.5.6	Structure-Based (Rational) Drug Design with the Aid of Click Chemistry	244
2.5.7	Conclusions	252
2.6	CuAAC Applications in Macromolecules, Polymers, Nanoparticles, and Supramolecular Chemistry	
	C. Zhang, K. M. Page, and J. C. M. van Hest	
<hr/>		
2.6	CuAAC Applications in Macromolecules, Polymers, Nanoparticles, and Supramolecular Chemistry	261
2.6.1	CuAAC Applications in Macromolecular Synthesis	262
2.6.1.1	Main-Chain and Side-Chain Modification of Unbranched Structures	262
2.6.1.1.1	Formation of Linear Polymers	262
2.6.1.1.2	Side-Chain Functionalization	263
2.6.1.1.3	Formation of Cyclic Polymers	264

2.6.1.2	Synthesis of Branched Polymers	265
2.6.1.2.1	Dendrimers	265
2.6.1.2.2	Hydrogels	269
2.6.2	Bioconjugation with Polymers	270
2.6.2.1	Hybrid Polymers	271
2.6.2.2	Protein PEGylation	274
2.6.3	Polymer Nanoparticle Functionalization	276
2.6.3.1	Nanoparticle Labeling	276
2.6.3.2	Nanocatalysis via CuAAC	279
2.6.4	Polymer Conjugation on Surfaces	281
2.6.5	Conclusions	283

3 Ruthenium-Catalyzed Azide–Alkyne Cycloaddition (RuAAC)

A. J. Paterson^(a), T. Beke-Somfai^(b), and N. Kann^(c)

3	Ruthenium-Catalyzed Azide–Alkyne Cycloaddition (RuAAC)	289
3.1	Mechanism of RuAAC	290
3.2	Catalysts, Azides, Alkynes, and Reaction Conditions Used in RuAAC	293
3.2.1	Catalysts Used in RuAAC	293
3.2.2	Azides Used in RuAAC	293
3.2.3	Alkynes Used in RuAAC	297
3.2.3.1	Internal Alkynes	297
3.2.3.2	Heteroatom-Substituted Alkynes	298
3.2.4	Reaction Conditions for RuAAC	301
3.2.4.1	Microwave Reactions	301
3.2.4.2	Solid-Phase Reactions	303
3.2.4.3	One-Pot Reactions	305
3.2.4.4	RuAAC in Flow Chemistry	306
3.2.5	RuAAC in Water Affording 1,4-Disubstituted 1,2,3-Triazoles	308
3.3	Synthetic Applications of RuAAC	308
3.3.1	General Synthetic Applications of RuAAC	309
3.3.2	RuAAC in Macrocyclization	309
3.3.3	Biological and Medicinal Chemistry Applications of RuAAC	312
3.3.3.1	RuAAC in Peptidomimetics	312
3.3.3.2	RuAAC Applications in Nucleoside and Nucleotide Analogues	320
3.3.4	Physical Chemistry Applications of RuAAC	321
3.3.5	RuAAC Applications in Polymer Chemistry	325

3.4	Azide–Alkyne Cycloadditions Affording 1,5-Disubstituted 1,2,3-Triazoles Catalyzed by Other Metals	329
3.5	Conclusions	331

4 **Metal-Free Click Reactions between 1,3-Dipoles and Alkynes/Alkenes**

4.1	Strain-Promoted Azide–Alkyne Cycloaddition (SPAAC): Background, Substrate Preparation, and Reactivity T. Harris ^{ORCID} and I. V. Alabugin ^{ORCID}	
4.1	Strain-Promoted Azide–Alkyne Cycloaddition (SPAAC): Background, Substrate Preparation, and Reactivity	337
4.1.1	Cycloaddition/Pericyclic Reaction Mechanism of SPAAC	337
4.1.2	Preparation of Azides for SPAAC	338
4.1.3	Preparation of Cycloalkynes for SPAAC	340
4.1.3.1	Synthesis of Cycloalkynes for SPAAC by Cyclization/Ring Expansion	341
4.1.3.1.1	Nicholas Reaction	341
4.1.3.1.2	Büchner–Curtius–Schlotterbeck Ring Expansion	342
4.1.3.1.3	Reductive Amination	343
4.1.3.1.4	Inverse-Electron-Demand Diels–Alder Reaction	343
4.1.3.1.5	Friedel–Crafts Alkylation	344
4.1.3.2	Synthesis of Cycloalkynes for SPAAC by Triple-Bond Formation	346
4.1.3.2.1	<i>syn</i> -Fragmentations of Vinyl Trifluoromethanesulfonates	346
4.1.3.2.1.1	Sulfoxide–Magnesium Exchange of 2-Sulfinylcycloalkenyl Trifluoromethanesulfonates	346
4.1.3.2.1.2	Fluoride-Induced Fragmentation of Vicinal Trimethylsilyl Trifluoromethanesulfonates	347
4.1.3.2.1.3	Base-Induced Fragmentation of Vinyl Trifluoromethanesulfonates	347
4.1.3.2.2	Dehydrohalogenation of Vinyl Bromides	348
4.1.3.2.3	Dicobalt Deprotection	349
4.1.3.2.4	Photodecarbonylation of Cyclopropanones	349
4.1.3.3	Synthesis of Cycloalkynes for SPAAC with Simultaneous Assembly of the Triple Bond and the Ring	350
4.1.3.3.1	Williamson Ether Reaction	350
4.1.3.3.2	Tandem Cyclization/Fragmentation of Vinylogous Acyl Trifluoromethanesulfonates	351
4.1.3.3.3	Fluoride-Induced Fragmentation of Bicyclic Silylated Methyleneaziridines	352
4.1.3.3.4	Lewis Acid Promoted Ring Expansion of Bicyclic Diazo Ketones	353

4.1.4	The Role of Strain and Evaluating Strain in SPAAC	353
4.1.5	Strategies for Destabilizing Cycloalkyne Reagents	355
4.1.6	Effects of Hydrophobic and Hydrophilic Substituents	356
4.1.7	Distortion/Interaction-Activation Strain Model for Evaluating SPAAC Reactivity	357
4.1.8	Origin of Electronic Effects in SPAAC	358
4.1.8.1	Assistance to Bending	359
4.1.8.2	Assistance to Bond Formation	360
4.1.9	Stereoelectronic Effects in Cycloalkyne Cycloadditions	361
4.1.9.1	Direct Electronic Effects	361
4.1.9.2	Remote Electronic Effects	362
4.1.10	Controlling SPAAC Reactivity through Azide Modification	365
4.1.10.1	Increasing SPAAC Reactivity through Azide “Umpolung”	365
4.1.10.2	Controlling SPAAC Reactivity through Steric Bulk in Alkyl, Alkenyl, and Aryl Azides	366
4.1.10.3	Transient Protection of Aryl Azides for Site-Specific SPAAC	368
4.1.11	Strain-Promoted Alkyne–Nitron Cycloaddition (SPANC)	368
4.1.11.1	Preparation of Nitrones	369
4.1.11.2	Reactivity and Stability of Nitrones	370
4.1.12	Conclusions	371

4.2 Applications of SPAAC and SPANC in Life Sciences

L. J. N. Janssen and D. Blanco-Ania 

4.2	Applications of SPAAC and SPANC in Life Sciences	379
4.2.1	Applications In Vitro	381
4.2.1.1	Applications on the Cell Surface	381
4.2.1.1.1	Surface Labeling and Imaging	381
4.2.1.1.2	Radiolabeling	383
4.2.1.1.3	Modification of Proteins	385
4.2.1.1.4	Antibody–Drug Conjugates	386
4.2.1.2	Applications inside the Cell	388
4.2.1.2.1	Intracellular Imaging	388
4.2.1.2.2	DNA and RNA Applications	390
4.2.1.2.3	Intracellular Probing	392
4.2.1.2.4	Other Intracellular Applications	393
4.2.1.2.4.1	Drug Delivery inside the Cell	393
4.2.1.2.4.2	Isomer-Free Generation of Biomolecules inside the Cell	393
4.2.2	Applications In Vivo	394

4.2.2.1	Applications on the Cell Surface	394
4.2.2.1.1	Surface Labeling and Imaging	394
4.2.2.1.2	Radiolabeling	396
4.2.2.1.3	Cell Targeting	398
4.2.2.2	Applications inside the Cell	399
4.2.2.2.1	Intracellular Radiolabeling via Nanoparticles	399
4.2.3	Applications Ex Vivo	400
4.2.3.1	Oligomer Ligation for CRISPR-Cas9	400
4.2.3.2	Conjugation of Metabolically Labeled Extractions	400
4.2.3.3	Cell Engineering	402
4.2.4	Conclusions	402
4.3	1,3-Dipolar Cycloadditions of Alkenes D. Svatunek and K. N. Houk	
<hr/>		
4.3	1,3-Dipolar Cycloadditions of Alkenes	407
4.3.1	Reactions of Norbornenes and Norbornadienes	408
4.3.1.1	Norbornenes and Sulfonyl Azides	408
4.3.1.2	Oxanorbornadiene [3 + 2] Cycloaddition/Retro-Diels–Alder Cascade	409
4.3.1.2.1	Reaction with Azides	409
4.3.1.2.2	Reaction with Metal Azide Complexes	412
4.3.1.2.3	Reaction with Diazo Compounds	413
4.3.1.3	Norbornenes and Nitrile Oxides	414
4.3.1.4	Oxa(aza)bicyclic Alkenes and Nitrones	415
4.3.2	Reactions of <i>trans</i> -Cycloalkenes	415
4.3.2.1	Reaction of Azides and <i>trans</i> -Cyclooctenes	415
4.3.2.2	Photocatalysis-Induced <i>trans</i> -Cycloheptene–Azide Cycloadditions	418
4.3.2.3	Photoinduced <i>trans</i> -Cycloheptenone–Azide Click Reaction	419
4.3.3	Reactions of Allenes	419
4.3.4	Reactions of Unstrained Alkenes with Reactive 1,3-Dipoles	423
4.3.4.1	Electron-Poor Azides and Electron-Rich Alkenes	423
4.3.4.2	Reactions of Diazo Compounds	425
4.3.4.3	Reactions of Nitrile Imines	426
4.3.4.4	Reactions of Nitrile Ylides	429
4.3.5	Conclusions	430

5	Sulfur Fluoride Exchange (SuFEx) M.-C. Giel, ¹ C. J. Smedley, ² and J. E. Moses ³

6.1.3.2.4	Thiol–Yne Coupling for Double Hydrothiolation of Alkynes	547
6.1.4	Applications of Hydrothiolation Reactions in Life Sciences	551
6.1.5	Conclusions	555

6.2	Hybridization of Thiol–Ene Chemistry Hydrogels for Biomedical Applications Z. Xu and K. M. Bratlie ¹⁰	
<hr/>		
6.2	Hybridization of Thiol–Ene Chemistry Hydrogels for Biomedical Applications	559
6.2.1	Hydrogel Materials	559
6.2.2	Thiol–Ene Reactions for Hydrogel Cross-Linking	559
6.2.3	Thiol–Ene Cross-Linking in Regulating Hydrogel Properties	563
6.2.3.1	Naturally Derived Polymer Hydrogels	563
6.2.3.2	Bioactive Synthetic Hydrogels	564
6.2.3.2.1	Functionalizing PEG with Peptides	564
6.2.3.2.2	Hybrid Hydrogels	564
6.2.4	Thiol–Ene Hydrogels in Tissue Engineering	565
6.2.4.1	Application of Thiol–Ene Hydrogels in Wound Dressing	565
6.2.4.2	Application of Thiol–Ene Hydrogels in 3D-Printed Scaffolds	568
6.2.4.2.1	Formation of 3D-Printed Hydrogels	568
6.2.4.2.2	3D-Printing Applications	570
6.2.4.3	Application of Thiol–Ene Hydrogels in Cartilage and Bone Tissue Engineering	571
6.2.5	Conclusions and Future Perspectives	573
7	Tetrazine-Based Cycloadditions in Click Chemistry W. Kuba ¹⁰ , M. Wilkovitsch ¹⁰ , J. C. T. Carlson ¹⁰ , and H. Mikula ¹⁰	
<hr/>		
7	Tetrazine-Based Cycloadditions in Click Chemistry	577
7.1	Cycloaddition Reactions of 1,2,4,5-Tetrazines	578
7.2	Reactivity and Stability of Tetrazines	580
7.3	Synthesis and Modification of 1,2,4,5-Tetrazines	582
7.3.1	Synthesis of Tetrazines by Ring Construction with Formation of C–N Bonds	582
7.3.2	Synthesis of Tetrazines by Replacing Substituents	585
7.3.3	Modification of Tetrazine Substituents	586
7.4	Dienophiles for Tetrazine Cycloadditions	587
7.4.1	The Role of Strain and the Underlying Principle of Reactivity	589
7.4.2	<i>trans</i> -Cyclooctenes (TCOs)	589
7.4.3	<i>trans</i> -1-Silacyclohept-4-enes (Si-TCHs)	597
7.4.4	Cyclooctynes	598
7.4.5	Norbornenes	599
7.4.6	Cyclopropenes	600

7.4.7	Isonitriles	602
7.4.8	Terminal Alkenes	604
7.4.9	Vinylboronic Acids	605
7.5	Triggered Tetrazine Cycloadditions	607
7.5.1	Triggered In Situ Formation of Tetrazines	607
7.5.2	Triggered In Situ Formation of Dienophiles	609
7.6	Bond-Cleavage Reactions upon Tetrazine-Based Cycloadditions	611
7.6.1	Tetrazine-Triggered Cleavage of <i>trans</i> -Cyclooctenes	612
7.6.2	<i>trans</i> -Cyclooctene-Triggered Cleavage of Tetrazines	617
7.6.3	Tetrazine-Triggered Cleavage of Isonitriles	619
7.6.4	Isonitrile-Triggered Cleavage of Tetrazines	621
7.6.5	Tetrazine-Triggered Cleavage of Vinyl Ethers	622
7.7	Applications of Tetrazine-Based Cycloadditions	624
7.7.1	Selected Applications of Bioorthogonal Ligation Reactions	624
7.7.2	Selected Applications of Bioorthogonal Bond-Cleavage Reactions	628
8	Sydnone-Based Cycloadditions in Click Chemistry F. Friscourt 	
8	Sydnone-Based Cycloadditions in Click Chemistry	641
8.1	Sydnone–Alkyne Cycloadditions in the Presence of Copper (CuSAC)	642
8.1.1	Copper-Mediated Sydnone–Alkyne Cycloadditions	642
8.1.2	Copper-Catalyzed Sydnone–Alkyne Cycloadditions	644
8.2	Strain-Promoted Sydnone–Alkyne Cycloadditions (SPSAC)	646
8.2.1	SPSAC for Fast and Metal-Free Protein Bioconjugation	646
8.2.2	SPSAC for Fluorogenic Imaging	649
8.2.3	SPSAC for Metabolic Oligosaccharide Engineering	652
8.2.4	SPSAC for Click and Release Processes	653
8.3	Photoactivated Ligation Using Sydnones	654
8.4	Conclusions	657
	Author Index	661
