

Multicomponent Reactions 2

Reactions Involving an α,β -Unsaturated Carbonyl Compound as Electrophilic Component, Cycloadditions, and Boron-, Silicon-, Free-Radical-, and Metal-Mediated Reactions

	Preface	V
	Volume Editor's Preface	VII
	Abstracts	XI
	Table of Contents	XXIII
2.1	Reactions Involving an α,β-Unsaturated Carbonyl Compound or Analogue as Electrophilic Component	1
2.1.1	Michael Addition as the Key Step J. Rodriguez, D. Bonne, Y. Coquerel, and T. Constantieux	1
2.1.2	In Situ Generation of the α,β-Unsaturated Carbonyl Component by Wittig-Type Reaction N. S. Alavijeh, E. Ghabraie, and S. Balalaie	37
2.1.3	With Isocyanide Participation A. Shaabani, A. Sarvary, and S. Shaabani	55
2.1.4	Electron-Deficient Alkynes as Electrophiles A. Shaabani, A. Sarvary, and S. Shaabani	103
2.1.5	[2 + 2] Cycloaddition as the Key Step K. Takasu	195
2.1.6	[3 + 2] Cycloaddition as the Key Step R. Raghunathan and S. Purushothaman	211
2.1.7	[4 + 2] Cycloaddition as the Key Step M. C. Elliott and D. H. Jones	243
2.2	Reactions with Cycloaddition as the Key Step (Not Involving α,β-Unsaturated Carbonyl Compound Electrophiles)	287
2.2.1	[3 + 2] Cycloaddition S. G. Modha and E. V. Van der Eycken	287
2.2.2	[4 + 2] Cycloaddition L. G. Voskressensky and A. A. Festa	303

2.3	Boron-Mediated Multicomponent Reactions K. J. Szabó	345
2.4	Silicon-Mediated Multicomponent Reactions J.-P. Wan	377
2.5	Free-Radical-Mediated Multicomponent Reactions Involving Carbon Monoxide A. Fusano and I. Ryu	409
2.6	Metal-Mediated Multicomponent Reactions	439
2.6.1	Stoichiometric Metal Participation C. Xi and C. Chen	439
2.6.2	Catalytic Metal Participation B. A. Arndtsen and J. Tjutrins	475
	Keyword Index	535
	Author Index	573
	Abbreviations	589

Table of Contents

2.1	Reactions Involving an α,β-Unsaturated Carbonyl Compound or Analogue as Electrophilic Component	
2.1.1	Michael Addition as the Key Step J. Rodriguez, D. Bonne, Y. Coquerel, and T. Constantieux	
2.1.1	Michael Addition as the Key Step	1
2.1.1.1	Achiral and Racemic Reactions	1
2.1.1.1.1	Multicomponent Reactions Initiated by a Michael Addition	1
2.1.1.1.2	Multicomponent Reactions Not Initiated by a Michael Addition	7
2.1.1.2	Diastereoselective Reactions	8
2.1.1.2.1	Multicomponent Reactions Initiated by a Michael Addition	8
2.1.1.2.2	Multicomponent Reactions Not Initiated by a Michael Addition	19
2.1.1.3	Enantioselective Reactions	20
2.1.1.3.1	Multicomponent Reactions Initiated by a Michael Addition	20
2.1.1.3.2	Multicomponent Reactions Not Initiated by a Michael Addition	31
2.1.2	In Situ Generation of the α,β-Unsaturated Carbonyl Component by Wittig-Type Reaction N. S. Alavijeh, E. Ghabraie, and S. Balalaie	
2.1.2	In Situ Generation of the α,β-Unsaturated Carbonyl Component by Wittig-Type Reaction	37
2.1.2.1	Chemoselective Multicomponent Synthesis of α,β -Unsaturated Esters and Their Subsequent Diels–Alder Reactions	38
2.1.2.2	Oxidation/Wittig Alkenation/Diels–Alder Multicomponent Reactions	39
2.1.2.3	Enantioselective Organocatalytic Michael/Wittig/Michael/Michael Reactions ..	41
2.1.2.4	Catalytic Asymmetric Tandem Wittig–Cyanosilylation Reactions	46
2.1.2.5	Tandem Horner–Wadsworth–Emmons Alkenation/Cyclization Sequences	48
2.1.2.6	Wittig/Knoevenagel/Diels–Alder/Huisgen Cycloaddition Reactions	50
2.1.2.7	Wittig/Michael Reactions	51
2.1.3	With Isocyanide Participation A. Shaabani, A. Sarvary, and S. Shaabani	
2.1.3	With Isocyanide Participation	55
2.1.3.1	Reactions with a CH-Acid Component	55

2.1.3.2	Reactions with an NH-Acid Component	64
2.1.3.3	Reactions with an OH-Acid Component	73
2.1.3.4	Reactions with a Carbonyl Compound Component	79
2.1.3.5	Reactions with an Isocyanate or Isothiocyanate Component	91
2.1.3.6	Reactions with an Imine or Iminium Component	92
2.1.3.7	Miscellaneous Reactions	95
2.1.4	Electron-Deficient Alkynes as Electrophiles A. Shaabani, A. Sarvary, and S. Shaabani	
<hr/>		
2.1.4	Electron-Deficient Alkynes as Electrophiles	103
2.1.4.1	Nitrogen Nucleophiles	103
2.1.4.1.1	Aza-aromatics	103
2.1.4.1.2	Primary and Secondary Amines	132
2.1.4.1.3	Other Nitrogen Nucleophiles	164
2.1.4.2	Carbene Nucleophiles	169
2.1.4.3	Miscellaneous Reactions	181
2.1.4.4	Conclusions	190
2.1.5	[2 + 2] Cycloaddition as the Key Step K. Takasu	
<hr/>		
2.1.5	[2 + 2] Cycloaddition as the Key Step	195
2.1.5.1	Reaction Using Enamines as the Nucleophilic Component	195
2.1.5.2	Reaction Using Silyl Enol Ethers as the Nucleophilic Component	202
2.1.5.3	Reaction Using Allylsilanes as the Nucleophilic Component	206
2.1.5.4	Reaction Using Styrenes as the Nucleophilic Component	208
2.1.6	[3 + 2] Cycloaddition as the Key Step R. Raghunathan and S. Purushothaman	
<hr/>		
2.1.6	[3 + 2] Cycloaddition as the Key Step	211
2.1.6.1	Reactions Involving Cyclic α,β -Unsaturated Carbonyl Compounds as Dipolarophiles	212
2.1.6.2	Reactions Involving More than Three Components	222
2.1.6.2.1	Synthesis of Polycyclic Spiro-Fused Pyrrolidines by Five-Component Reaction	222
2.1.6.2.2	Synthesis of Polycyclic Spiro-Fused Pyrrolizidines by Four-Component Reaction	223
2.1.6.3	Reactions Involving β -Lactam-Derived Dipolarophiles	225

2.1.6.4	Reactions Involving Baylis–Hillman Adducts as Dipolarophiles	228
2.1.6.5	Reactions Involving Ferrocene-Appended Dipolarophiles	232
2.1.6.6	Transition-Metal-Catalyzed Carbonyl Ylide [3 + 2] Cycloadditions	235
2.1.6.7	Asymmetric Synthesis Involving [3 + 2]-Cycloaddition Reactions of α,β -Unsaturated Carbonyl Compounds	236
2.1.6.7.1	Asymmetric Synthesis of Spiro-Fused Pyrrolidines, Pyrrolizidines, or Pyrrolothiazoles Using Chiral Dipolarophiles	236
2.1.6.7.2	Asymmetric Synthesis of Pyrrolidines Using Chiral Dipoles	237
2.1.6.7.3	Asymmetric Synthesis of Pyrrolidines Using a Chiral Catalyst	239
2.1.7	[4 + 2] Cycloaddition as the Key Step M. C. Elliott and D. H. Jones	
2.1.7	[4 + 2] Cycloaddition as the Key Step	243
2.1.7.1	α,β -Unsaturated Carbonyl Compounds Used as Reagent	243
2.1.7.1.1	α,β -Unsaturated Carbonyl Compounds Used as Diene	243
2.1.7.1.2	α,β -Unsaturated Carbonyl Compounds Used as Dienophile	246
2.1.7.1.3	α,β -Unsaturated Carbonyl Compounds Used as Diene and as Dienophile	263
2.1.7.2	α,β -Unsaturated Carbonyl Compounds Formed In Situ	268
2.1.7.2.1	α,β -Unsaturated Carbonyl Compounds Used as Diene	268
2.1.7.2.2	α,β -Unsaturated Carbonyl Compounds Used as Dienophile	279
2.1.7.2.3	α,β -Unsaturated Carbonyl Compounds Used as Diene and as Dienophile	280
2.2	Reactions with Cycloaddition as the Key Step (Not Involving α,β-Unsaturated Carbonyl Compound Electrophiles)	
2.2.1	[3 + 2] Cycloaddition S. G. Modha and E. V. Van der Eycken	
2.2.1	[3 + 2] Cycloaddition	287
2.2.1.1	The Azide–Alkyne Huisgen Cycloaddition	287
2.2.1.1.1	Microwave-Assisted Synthesis of 1,4-Disubstituted 1,2,3-Triazoles	288
2.2.1.1.2	One-Pot Multicomponent Synthesis of Fully Substituted 1,2,3-Triazoles	289
2.2.1.1.3	Microwave-Assisted Benzyne–Azide Cycloaddition	290
2.2.1.1.4	Use of an Epoxide Precursor to an Organic Azide	291
2.2.1.1.5	Stereo- and Regioselective One-Pot Synthesis of Triazole-Based Unnatural Amino Acids and 1-(β -Aminoalkyl)triazoles	293
2.2.1.2	Nitrile Oxides as 1,3-Dipoles	294

2.2.1.2.1	4,5-Dihydroisoxazoles via a Multicomponent Cascade Reaction	295
2.2.1.3	Nitrones as 1,3-Dipoles	296
2.2.1.3.1	Synthesis of Isoquinolin-1-amines via an In Situ Generated Nitrone	296
2.2.1.4	Nitronates as 1,3-Dipoles	297
2.2.1.4.1	Domino [4+2]/[3+2]-Cycloaddition Reactions	297
2.2.1.5	Azomethine Ylides as 1,3-Dipoles	298
2.2.1.5.1	Three-Component Synthesis of Polysubstituted 1 <i>H</i> -Pyrroles	299
2.2.1.6	Reactions of Other 1,3-Dipoles Generated from Carbenes	300
2.2.2	[4+2] Cycloaddition L. G. Voskressensky and A. A. Festa	
2.2.2	[4+2] Cycloaddition	303
2.2.2.1	Carbodienes	304
2.2.2.1.1	Sequence of [4+2]/[2+2] Cycloadditions	304
2.2.2.1.2	Reactions with an Allylboration Step	305
2.2.2.1.2.1	Diels–Alder/Allylboration Reaction Sequence	305
2.2.2.1.2.2	Diels–Alder/1,4-Hydrovinylation/Allylboration Reaction Sequence	307
2.2.2.1.3	Cycloaddition of Sulfur Dioxide	309
2.2.2.2	Heterodienes	311
2.2.2.2.1	Azadienes	311
2.2.2.2.1.1	Aza-[4+2]/Allylboration Reaction Involving Maleimides	312
2.2.2.2.1.2	Aza-[4+2]/Allylboration Reaction Involving Sulfinimide Dienophiles	313
2.2.2.2.2	Oxadienes	315
2.2.2.2.3	Other Heterodienes	316
2.2.2.3	Late-Stage [4+2] Cycloadditions	318
2.2.2.3.1	Intramolecular [4+2] Cycloaddition	318
2.2.2.3.1.1	Heterodienes	318
2.2.2.3.1.1.1	Intramolecular Diels–Alder Reaction on Furan (IMDAF)	320
2.2.2.3.1.1.2	Intramolecular Diels–Alder Reaction on Oxazole	322
2.2.2.3.2	Intermolecular [4+2] Cycloaddition	324
2.2.2.3.2.1	Carbodiene Components	324
2.2.2.3.2.1.1	Carbodienes Generated from Amides and Aldehydes	324
2.2.2.3.2.1.2	Carbodienes Generated from Anhydrides (or Ortho Esters, or Alcohols) and Aldehydes	326
2.2.2.3.2.1.3	Carbodienes Generated from Isocyanates and Aldehydes	327
2.2.2.3.2.2	The Povarov Reaction	328
2.2.2.3.2.2.1	First Multicomponent Version of the Povarov Reaction	329

2.2.2.3.2.2.2	Povarov Reaction Catalyzed by Lanthanide Trifluoromethanesulfonates	330
2.2.2.3.2.2.3	Multicomponent Synthesis of Furo[3,2-c]quinolines and Pyrano[3,2-c]quinolines via Povarov Reaction	332
2.2.2.3.2.2.4	Multicomponent Povarov Reaction with Ring-Strained Alkenes	335
2.2.2.3.2.2.5	The Organocatalytic Asymmetric Three-Component Povarov Reaction	336
2.2.2.3.2.2.6	Base-Catalyzed Three-Component Povarov Reaction on a Poly(ethylene glycol) Support	337
2.2.2.3.2.3	Multicomponent Domino Knoevenagel/Hetero-Diels–Alder Reaction	339
2.2.2.3.2.3.1	Multicomponent Domino Knoevenagel/Hetero-Diels–Alder Reaction with 1,3-Dicarbonyl Compounds	340
2.2.2.3.2.3.2	Multicomponent Domino Knoevenagel/Hetero-Diels–Alder Reaction with Benzoquinone Derivatives	341
2.3	Boron-Mediated Multicomponent Reactions K. J. Szabó	
2.3	Boron-Mediated Multicomponent Reactions	345
2.3.1	General Strategies	346
2.3.2	Alkylboronates as Reaction Intermediates	348
2.3.2.1	Reactions Involving Hydroboration of Alkenes	348
2.3.3	Multicomponent Reactions via Allylboration	350
2.3.3.1	Allylboronates from Allyl Alcohols and Derivatives	350
2.3.3.1.1	Reactions with Aldehydes	351
2.3.3.1.1.1	Synthesis of Homoallylic Alcohols and Amines	351
2.3.3.1.1.2	In Situ Formation of Unstable Aldehydes	355
2.3.3.1.1.3	Petasis Reaction	357
2.3.3.1.1.4	Ring-Closing Metathesis	359
2.3.3.1.2	Reactions with Ketones	362
2.3.3.1.3	Suzuki–Miyaura Coupling	364
2.3.3.2	Allylboronates by Metathesis	365
2.3.3.3	Allylboronates by C–H Activation	366
2.3.3.4	Three-Component Hetero-[4+2]-Cycloaddition/Allylboration Approach	367
2.3.4	Vinyl- and Arylboronates as Key Components in Multicomponent Reactions	369
2.3.4.1	Vinyl- and Arylboronates by C–H Activation	369
2.3.4.1.1	Suzuki Coupling	369
2.3.4.1.2	Synthesis of Phenols, Anilines, and Arenecarbonitriles	371
2.3.5	Arylboronates from Aryl Halides	372
2.3.6	Summary and Outlook	374

2.4	Silicon-Mediated Multicomponent Reactions	
	J.-P. Wan	
<hr/>		
2.4	Silicon-Mediated Multicomponent Reactions	377
2.4.1	Multicomponent Reactions Providing Cyclic Products	378
2.4.1.1	[3 + 2 + 1]-Cyclization Reactions	378
2.4.1.1.1	Biginelli Reactions	378
2.4.1.1.1.1	Biginelli Reactions Using Acyclic 1,3-Dicarbonyl Compounds	378
2.4.1.1.1.2	Biginelli Reactions Using Cyclic 1,3-Dicarbonyl Compounds	381
2.4.1.1.1.3	Biginelli-Like Reactions Using Monocarbonyl Substrates	382
2.4.1.1.1.4	Biginelli-Like Reactions Using Activated Alkenes	383
2.4.1.1.1.5	Biginelli-Like Reactions Using Trifluoromethyl-Functionalized 1,3-Dicarbonyl Compounds	385
2.4.1.1.2	Three-Component Synthesis of 1,3-Thiazines and Tetrahydropyrimidinones	386
2.4.1.1.3	Three-Component Synthesis of Pyridines	387
2.4.1.1.4	Three-Component Synthesis of 1,4-Dihydropyridines	388
2.4.1.2	[3 + 1 + 1]-Cyclization Reactions	390
2.4.1.2.1	Three-Component Synthesis of 4,5-Dihydro-1 <i>H</i> -imidazoles	390
2.4.1.2.2	Three-Component Synthesis of Imidazole-Fused Heterocycles	391
2.4.1.2.2.1	Synthesis of 2-Piperazin-1-ylimidazo[2,1- <i>b</i>][1,3,4]thiadiazoles	391
2.4.1.2.2.2	Synthesis of Imidazo[1,2- <i>a</i>]quinoxalines	392
2.4.1.3	[4 + 1 + 1]-Cyclization Reactions	393
2.4.1.4	[5 + 1 + 1]-Cyclization Reactions	395
2.4.1.5	[2 + 2 + 1 + 1]-Cyclization Reactions	397
2.4.1.6	Cyclization Reactions Providing Fused Systems	398
2.4.2	Multicomponent Reactions Providing Acyclic Products	398
2.4.2.1	Based on the Addition of Carbon Nucleophiles	399
2.4.2.1.1	Addition to Imide Intermediates	399
2.4.2.1.2	Addition to Imine Intermediates	401
2.4.2.1.3	Addition to Carbonyl Electrophiles	402
2.4.2.2	Based on the Addition of Phosphorus Nucleophiles	404
2.4.2.3	Based on the Addition of Nitrogen Nucleophiles	405

2.5	Free-Radical-Mediated Multicomponent Reactions Involving Carbon Monoxide A. Fusano and I. Ryu	
<hr/>		
2.5	Free-Radical-Mediated Multicomponent Reactions Involving Carbon Monoxide	409
2.5.1	Synthesis of Unsymmetrical Ketones by Three-Component Radical Reactions	410
2.5.1.1	Reactions Comprising Alkyl Halides, Carbon Monoxide, and Electron-Deficient Alkenes	411
2.5.1.2	Reactions Comprising Alkanes, Carbon Monoxide, and Electron-Deficient Alkenes	414
2.5.2	Synthesis of Acrylamides and Lactams by Multicomponent Radical Reactions	415
2.5.2.1	Reactions Comprising Alkynes, Carbon Monoxide, and Amines	416
2.5.2.2	Reactions Comprising Alkynyl Imines, Carbon Monoxide, and Group 14 and 16 Hydrides	416
2.5.3	Synthesis of Unsymmetrical Ketones by Multicomponent Radical Reactions Using Unimolecular Chain-Transfer Reagents	421
2.5.3.1	Reactions Using Allyltin Compounds	421
2.5.3.2	Reactions Using Tin Enolates	423
2.5.3.3	Reactions Using Sulfonyl Oxime Ethers	424
2.5.4	Synthesis of Carbonyl Compounds by Multicomponent Radical Carbonylation Reactions Involving Group Transfer	425
2.5.4.1	Reactions with Organoselenium Transfer	425
2.5.4.2	Reactions with Iodine Transfer	427
2.6	Metal-Mediated Multicomponent Reactions	
<hr/>		
2.6.1	Stoichiometric Metal Participation C. Xi and C. Chen	
<hr/>		
2.6.1	Stoichiometric Metal Participation	439
2.6.1.1	Multicomponent Reactions Mediated by Main Group Metallic Reagents	439
2.6.1.1.1	Magnesium-Mediated Reactions	439
2.6.1.1.1.1	Vinylmagnesium Chloride Mediated Synthesis of 2-Vinylbut-2-ene-1,4-diols ..	439
2.6.1.1.1.2	Organomagnesium Chloride Mediated Synthesis of Furans	440
2.6.1.1.2	Indium-Mediated Reactions	441
2.6.1.1.2.1	Indium-Mediated Synthesis of Homoallylic Esters	442
2.6.1.1.2.2	Indium-Mediated Synthesis of <i>N</i> -Homoallylic 2-Amino Alcohols	443
2.6.1.1.2.3	Indium-Mediated Synthesis of <i>N</i> -Aryl-Substituted Homoallylic Amines	444

2.6.1.1.2.4	Indium-Mediated Synthesis of 2-Amino-4 <i>H</i> -1-benzopyrans	445
2.6.1.2	Multicomponent Reactions Mediated by Transition Metals	446
2.6.1.2.1	Titanium- and Zirconium-Mediated Reactions	446
2.6.1.2.1.1	Titanium(II)-Mediated Reactions	446
2.6.1.2.1.1.1	Titanocene(II)-Mediated Synthesis of Vinylallenes	446
2.6.1.2.1.1.2	Titanium(II) Alkoxide Mediated Synthesis of Benzenes	447
2.6.1.2.1.1.3	Titanium(II) Alkoxide Mediated Synthesis of Pyridines	448
2.6.1.2.1.2	Zirconocene-Mediated Reactions	450
2.6.1.2.1.2.1	Zirconacyclopentene-Mediated Synthesis of Cyclopentenones	450
2.6.1.2.1.2.2	Zirconacyclopentene-Mediated Synthesis of γ -Enones	451
2.6.1.2.1.2.3	Zirconacyclopentadiene-Mediated Synthesis of Cyclopentadienones	452
2.6.1.2.1.2.4	Zirconacyclopentadiene-Mediated Synthesis of Fused Cyclohex-2-ene-1,4-diones and Higher <i>p</i> -Quinones	453
2.6.1.2.1.2.5	Oxazirconacyclopentene-Mediated Synthesis of 3-Methylene-3,6-dihydro-2 <i>H</i> -pyran-2-ones	455
2.6.1.2.1.2.6	Azazirconacyclopentadiene-Mediated Synthesis of Pyridines	457
2.6.1.2.2	Chromium-, Molybdenum-, and Tungsten-Mediated Reactions	457
2.6.1.2.2.1	Multicomponent Reactions Mediated by Group 6 Fischer Carbene Complexes	457
2.6.1.2.2.1.1	Synthesis of Substituted Cyclopentanol	457
2.6.1.2.2.1.2	Synthesis of 1-Allylcyclohexane-1,4-diols	459
2.6.1.2.2.1.3	Synthesis of 1,2,3,4-Tetrahydro-1,4-epoxynaphthalene Derivatives	459
2.6.1.2.2.1.4	Synthesis of Functionalized Naphthalenes	460
2.6.1.2.2.1.5	Coupling of Carbene Complexes with Allenes	461
2.6.1.2.2.1.6	Coupling of Carbene Complexes with Alkynes	462
2.6.1.2.2.1.7	Coupling of Carbene Complexes with 2-Aminobuta-1,3-dienes	463
2.6.1.2.2.1.8	Coupling of Carbene Complexes with Nitrones and Isocyanides	464
2.6.1.2.2.1.9	Coupling of Carbene Complexes with Diazo(trimethylsilyl)methane and <i>tert</i> -Butyl Isocyanide	465
2.6.1.2.2.2	Synthesis of Polycyclic Ring Systems Mediated by Tricarbonyl(η^6 -cycloheptatriene)chromium Complexes	466
2.6.1.2.3	Organocuprate-Mediated Synthesis of 4-(Methoxycarbonyl)azetid-2-ones	467
2.6.1.2.4	Zinc-Mediated Reactions	468
2.6.1.2.4.1	Arylzinc-Mediated Synthesis of (Diarylmethyl)amines	468
2.6.1.2.4.2	Arylzinc-Mediated Synthesis of α -Amino Esters	470
2.6.1.2.4.3	Zinc-Mediated Synthesis of α -Branched Amines	471
2.6.1.2.4.4	Zinc-Mediated Synthesis of α -Amino Esters	472

2.6.2	Catalytic Metal Participation B. A. Arndtsen and J. Tjutrins	
2.6.2	Catalytic Metal Participation	475
2.6.2.1	Multicomponent Cross Coupling and Carbonylation Reactions	475
2.6.2.1.1	Cyclization of Alkene- and Alkyne-Containing Nucleophiles	475
2.6.2.1.1.1	Synthesis of 3-Alkylidenetetrahydrofurans	476
2.6.2.1.1.2	Synthesis of 2,3,4-Substituted Furans	477
2.6.2.1.1.3	Synthesis of 3-Methylenepyrrolidines	478
2.6.2.1.1.4	Synthesis of Imidazolidin-2-ones	480
2.6.2.1.2	Cyclization of Products of Palladium-Catalyzed Cross-Coupling Reactions	481
2.6.2.1.2.1	Synthesis of Pyrimidines	481
2.6.2.1.2.2	Synthesis of Trisubstituted Quinolines	483
2.6.2.1.2.3	Four-Component Synthesis of Pyrazoles and Isoxazoles	484
2.6.2.1.2.4	Palladium-Catalyzed Three-Component Synthesis of Isoxazoles	485
2.6.2.1.2.5	Synthesis of Pyrroles and Furans	486
2.6.2.1.2.6	Synthesis of 1,2,4-Triazoles	488
2.6.2.1.3	Fused-Ring Heterocycles from <i>ortho</i> -Halogenated Arenes	489
2.6.2.1.3.1	Synthesis of Indoles and Benzofurans from 2-Iodoanilines and 2-Iodophenols	490
2.6.2.1.3.2	Synthesis of 2,3-Disubstituted Indoles	491
2.6.2.1.3.3	Synthesis of Indoles from Dihaloarenes	492
2.6.2.1.3.4	Synthesis of 10 <i>H</i> -Phenothiazines	493
2.6.2.1.3.5	Synthesis of Substituted 3-Methyleneisoindolin-1-ones	494
2.6.2.1.3.6	Carbonylative Synthesis of Quinolines	496
2.6.2.1.3.7	Synthesis of Isoquinolines and 1,6-Naphthyridines from Aldehydes, Alkynes, and Ammonia	497
2.6.2.2	Metallacycles in Multicomponent Reactions	497
2.6.2.2.1	Nickel-Catalyzed Reductive Coupling Reactions	498
2.6.2.2.1.1	Synthesis of Allylic Alcohols from Carbonyl Compounds and Alkynes	498
2.6.2.2.1.2	Synthesis of Allylic Amines from Alkynes, Imines, and Boranes	500
2.6.2.2.1.3	Synthesis of Homoallylic and Alk-4-en-1-ols from Carbonyl Compounds and Dienes	501
2.6.2.2.1.4	Synthesis of Homoallylic and Alk-4-en-1-amines from Imines and Dienes	502
2.6.2.2.1.5	Synthesis of Alk-4-en-1-ones from Enones and Alkynes	504
2.6.2.2.1.6	Synthesis of 1,4-Dienes	505
2.6.2.2.2	Ring-Forming Reactions via Cycloaddition Reactions	506
2.6.2.2.2.1	Metal-Catalyzed [2 + 2 + 2]-Cycloaddition Reactions	506
2.6.2.2.2.1.1	Synthesis of Fused-Ring Arenes	507

2.6.2.2.1.2	Regioselective Synthesis of Tetrasubstituted Arenes	508
2.6.2.2.1.3	Cyclotrimerization of Arynes, Alkenes, and Alkynes	509
2.6.2.2.1.4	Cyclotrimerization of Three Unsymmetrical Alkynes Using Boron Tethers	509
2.6.2.2.1.5	Synthesis of Polysubstituted Cycloheptadienes via [3 + 2 + 2]-Cycloaddition Reactions	511
2.6.2.2.3	Early Transition Metal Catalyzed Cycloadditions	512
2.6.2.2.3.1	Synthesis of 1,4,5-Substituted 1 <i>H</i> -Pyrazoles	512
2.6.2.2.3.2	Synthesis of Quinolines	513
2.6.2.2.3.3	Synthesis of 2,3-Diaminopyrroles	514
2.6.2.3	Multicomponent Approaches to 1,3-Dipolar Cycloaddition Reactions	515
2.6.2.3.1	Azide and Alkyne Cycloadditions	516
2.6.2.3.1.1	Synthesis of 1,2,3-Triazoles	516
2.6.2.3.1.2	Synthesis of 1-(1-Alkoxyalkyl)-1,2,3-triazoles	517
2.6.2.3.2	Multicomponent Cycloaddition Reactions with Ylides	518
2.6.2.3.2.1	Synthesis of 2,5-Dihydrofurans and Tetrahydrofurans	518
2.6.2.3.2.2	Stereoselective Synthesis of Functionalized 2,5-Dihydropyrroles and Pyrrolidines	520
2.6.2.3.2.3	Synthesis of 1,2-Diarylpyrroles	523
2.6.2.3.3	Multicomponent Syntheses Using 1,3-Oxazolium-5-olates (Münchnones)	524
2.6.2.3.3.1	Synthesis of Pyrroles	524
2.6.2.3.3.2	Synthesis of Imidazoles	526
2.6.2.3.3.3	Synthesis of Dihydroimidazoles	527
2.6.2.3.3.4	Synthesis of β -Lactams	529
