31.4.1.3.2.5.2.2 Method 2: Diacetoxylation of Alkenes ........................................... 272
31.4.1.3.2.5.2.3 Method 3: Oxidative Dearomatization of Phenols and Phenol Ethers .... 273
31.4.1.3.2.5.2.3.1 Variation 1: Oxidation of 4-Substituted Phenols ......................... 273
31.4.1.3.2.5.2.3.2 Variation 2: Oxidation of 2-Substituted Phenols ......................... 275
31.4.1.3.2.5.2.4 Method 4: Iodine(III)-Catalyzed Oxidations .................................... 276
31.4.1.3.2.5.2.4.1 Variation 1: Catalytic α-Functionalization of Carbonyl Compounds .... 276
31.4.1.3.2.5.2.4.2 Variation 2: Catalytic Lactonization Reactions ............................. 277
31.4.1.3.2.5.2.4.3 Variation 3: Catalytic Stereoselective Diacetoxylation of Alkenes .... 277
31.4.1.3.2.5.2.4.4 Variation 4: Catalytic Oxidative Cleavage of Alkenes and Alkynes .... 278
31.4.1.3.2.5.2.4.5 Variation 5: Catalytic Spirocyclization of Aromatic Substrates .......... 278
31.4.1.3.2.6 Preparation of Products with a New C—N Bond .................................. 280
31.4.1.3.2.6.1 Method 1: Azidations with Iodine(III) Reagents .............................. 280
31.4.1.3.2.6.2 Method 2: Aminations with Iodine(III) Reagents .............................. 280
31.4.1.3.2.6.3 Method 3: Reactions of Aryliodonium Imides .................................... 282
31.4.1.3.2.6.3.1 Variation 1: C—H Amidation ......................................................... 282
31.4.1.3.2.6.3.2 Variation 2: Aziridination of Alkenes ........................................... 283
31.4.1.3.2.7 Oxidations at Nitrogen ................................................................. 283
31.4.1.3.2.7.1 Method 1: Hypervalent Iodoarenes as Reagents for Hofmann Rearrangement ................................................................. 283
31.4.1.3.2.7.1.1 Variation 1: Hypervalent Iodine Catalyzed Hofmann Rearrangement .... 284
31.4.1.3.2.7.2 Method 2: Hypervalent Iodoarenes as Reagents for Generation of Nitrile Oxides from Oximes ......................................................... 285
31.4.1.3.2.7.2.1 Variation 1: Synthesis of Dihydroisoxazoles via Hypervalent Iodine Catalyzed Generation of Nitrile Oxides .............................. 286

31.41 Product Class 41: Arylphosphine Oxides

31.41.3 Arylphosphine Oxides and Heteroatom Derivatives ................................. 291
31.41.3.1 Arylphosphine Oxides ................................................................. 291
31.41.3.1.1 Synthesis of Arylphosphine Oxides ................................................... 291
Table of Contents

31.41.3.1.1 Method 1: Oxidation of Phosphines and Derivatives ................................ 291
31.41.3.1.1.1 Variation 1: Oxidation with Dioxygen or Air ................................... 292
31.41.3.1.1.2 Variation 2: Catalytic Oxidation .................................................... 292
31.41.3.1.1.3 Variation 3: Oxidation with Peroxides ............................................. 295
31.41.3.1.1.4 Variation 4: Photooxidation .................................................................. 297
31.41.3.1.1.5 Variation 5: Oxidation with Miscellaneous Oxidants ......................... 297
31.41.3.1.1.6 Variation 6: Oxidation of Chalcogen Phosphine Derivatives and Phosphine–Boranes ........................................ 300
31.41.3.1.1.2 Method 2: Addition of Secondary Phosphine Oxides to Unsaturated Bonds ..................................................... 301
31.41.3.1.1.2.1 Variation 1: Addition to Unsaturated Carbon—Carbon Bonds ............ 301
31.41.3.1.1.2.2 Variation 2: Addition to Imines ...................................................... 303
31.41.3.1.1.2.3 Variation 3: Addition to Carbonyl Compounds ............................... 306
31.41.3.1.1.2.4 Variation 4: Conjugate Addition to Activated Alkenes ...................... 309
31.41.3.1.1.3 Method 3: Nucleophilic Substitution at the Phosphorus Atom ................. 313
31.41.3.1.1.3.1 Variation 1: P–XBond Cleavage (X = Halogen) .................................. 313
31.41.3.1.1.3.2 Variation 2: P–OBond Cleavage ...................................................... 319
31.41.3.1.1.3.3 Variation 3: P–CBond Cleavage ...................................................... 321
31.41.3.1.1.3.4 Variation 4: Hydrolysis of Phosphonium Salts .................................. 323
31.41.3.1.1.3.5 Variation 5: Electrophilic Aromatic Substitution ............................. 327
31.41.3.1.1.4 Method 4: Nucleophilic Substitution with Phosphorus Nucleophiles .......... 327
31.41.3.1.1.4.1 Variation 1: Michaelis–Becker Reactions ....................................... 327
31.41.3.1.1.4.2 Variation 2: Michaelis–Arbuzov Reactions ..................................... 329
31.41.3.1.1.5 Method 5: Transition-Metal-Mediated P–CBond Formation .................. 332
31.41.3.1.1.5.1 Variation 1: Copper-Mediated Reactions ........................................ 333
31.41.3.1.1.5.2 Variation 2: Nickel-Mediated Reactions .......................................... 335
31.41.3.1.1.5.3 Variation 3: Palladium-Mediated Reactions ..................................... 338
31.41.3.1.1.5.4 Variation 4: Other Metal-Mediated Reactions ................................. 343
31.41.3.1.1.6 Method 6: Other Reactions ............................................................. 345
31.41.3.1.1.6.1 Variation 1: Phosphinylation of Ortho Esters .................................. 345
31.41.3.1.1.6.2 Variation 2: Manganese(III)-Mediated Free-Radical Phosphinylation .... 346
31.41.3.1.1.6.3 Variation 3: Palladium-Catalyzed Intramolecular Dehydrogenative Cyclization ......................................................... 347
31.41.3.1.1.6.4 Variation 4: Reaction of Elemental Phosphorus ............................... 348
31.41.3.1.1.6.5 Variation 5: The Wittig Reaction ...................................................... 348
31.41.3.1.1.6.6 Variation 6: The Appel Reaction ..................................................... 349
31.41.3.1.1.6.7 Variation 7: The Mitsunobu Reaction ............................................. 350
31.41.3.1.1.7 Method 7: Modification of Phosphine Oxides without Substitution at Phosphorus .......................................................... 351
31.41.3.1.1.7.1 Variation 1: Monoreduction of Bisphosphine Dioxides ...................... 351
31.41.3.1.1.7.2 Variation 2: Deprotonation Directed by the P=O Group ....................... 352
31.41.3.1.1.7.3 Variation 3: Nucleophilic Aromatic Substitution Promoted by the P=O Group ................................................................. 354
31.41.3.1.1.7.4 Variation 4: Alkene Metathesis ...................................................... 356
31.41.3.1.1.7.5 Variation 5: Cycloaddition Reactions .............................................. 357
31.41.3.1.1.7.6 Variation 6: Annulation Reactions ................................................. 360
31.41.3.1.1.7.7 Variation 7: Cross-Coupling Reactions .......................................... 361
31.41.3.1.2 Applications of Arylphosphine Oxides in Organic Synthesis

31.41.3.2 Arylphosphine Sulfides

31.41.3.2.1 Synthesis of Arylphosphine Sulfides

31.41.3.2.1.1 Method 1: Sulfuration of Phosphines

31.41.3.2.1.1.1 Variation 1: Using Elemental Sulfur

31.41.3.2.1.2 Variation 2: Using Polysulfide Reagents

31.41.3.2.1.3 Variation 3: Using Other Sulfur Sources

31.41.3.2.1.4 Variation 4: Via Sulfuration of Phosphine–Borane Species

31.41.3.2.1.5 Variation 5: Via Sulfuration of Other Chalcogen Phosphine Derivatives

31.41.3.2.1.6 Method 2: Addition of Secondary Phosphine Sulfides to Unsaturated Bonds

31.41.3.2.1.6.1 Variation 1: Addition to Carbonyl Compounds

31.41.3.2.1.6.2 Variation 2: Addition to Alkenes

31.41.3.2.1.6.3 Variation 3: Conjugate Addition to Activated Alkenes

31.41.3.2.2 Method 3: Nucleophilic Substitution with Phosphorus Nucleophiles

31.41.3.2.2.1 Variation 1: Transition-Metal-Mediated Substitution

31.41.3.2.2.2 Variation 2: Thio-Michaelis–Arbuzov Reactions

31.41.3.2.2.3 Variation 3: 

31.41.3.2.2.4 Variations 4: 

31.41.3.2.2.5 Method 4: Other Reactions

31.41.3.2.2.5.1 Variation 1: Reaction of Sulfides with Elemental Phosphorus

31.41.3.2.2.5.2 Variation 2: Cycloaddition of Strained Cyclic Phosphine Sulfides with Dienes

31.41.3.2.2.5.3 Variation 3: Wittig Reaction with Thiocarbonyl Compounds

31.41.3.2.2.5.4 Variation 4: Reaction of Ylides with Elemental Sulfur and with Thiiranes

31.41.3.2.2.5.5 Variation 5: Cycloaddition of (Alkylsulfanyl)(chloro)phosphines

31.41.3.2.2.5.6 Variation 6: Reaction of Butadienylphosphine Sulfides

31.41.3.2.2.6 Method 6: Modification of Phosphine Sulfides without Substitution at Phosphorus

31.41.3.2.2.6.1 Variation 1: 

31.41.3.2.2.6.2 Variation 2: Cycloaddition Reactions

31.41.3.2.2.6.3 Variation 3: Annulation Reactions

31.41.3.3 Applications of Arylphosphine Selenides in Organic Synthesis

31.41.3.3.1 Synthesis of Arylphosphine Selenides

31.41.3.3.1.1 Method 1: Selenation of Free Phosphines with Elemental Selenium

31.41.3.3.1.2 Method 2: Other Methods

31.41.3.3.2 Applications of Arylphosphine Selenides in Organic Synthesis
