Content

New: Science of Synthesis Knowledge Updates

SOS is continuously updated with high-quality content using clearly defined criteria for method selection as well as established editorial processes. The Editorial Board, in conjunction with the volume editors and expert authors, reviews the whole field of synthetic organic chemistry as presented in SOS and evaluates significant developments in synthetic methodology.

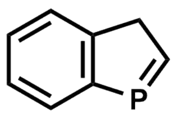
This release will see the addition of **one new update volume** comprising approx. **450** printed pages.

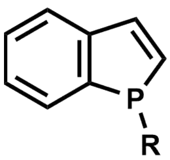
SOS Knowledge Updates 2022/2 highlights:

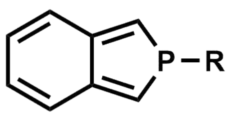
Revised and updated coverage of some classes of fused phosphorus heterocycles, namely **benzo[*b*]phospholes**, **benzo[*c*]phospholes**, and **phosphorus analogues of indolizines** (*R. A. Aitken)* including some new strategies for their synthesis.

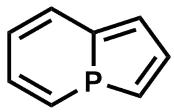
Advances in the synthesis of **quinolines** (*U. Sharma, R. Kumar, S. S. Gupta, and D. Chandra*), which covers strategies such as condensations, annulations, metal-catalyzed approaches, oxidations, cyclizations, and tandem reactions.

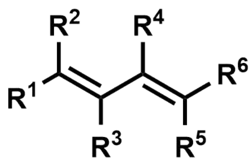
Reviews relating to strategies for the synthesis of 1,3-dienes:
one on **three-component coupling reactions that generate 1,3-dienes** (*S. E. Sloane, K. T. Behlow, M. D. Mills, and J. R. Clark*) and one on **conjugated diene synthesis by rearrangement of 1,3-dienes to 1,3-dienes** (*M. D. Mills and J. R. Clark*)

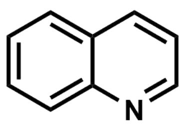










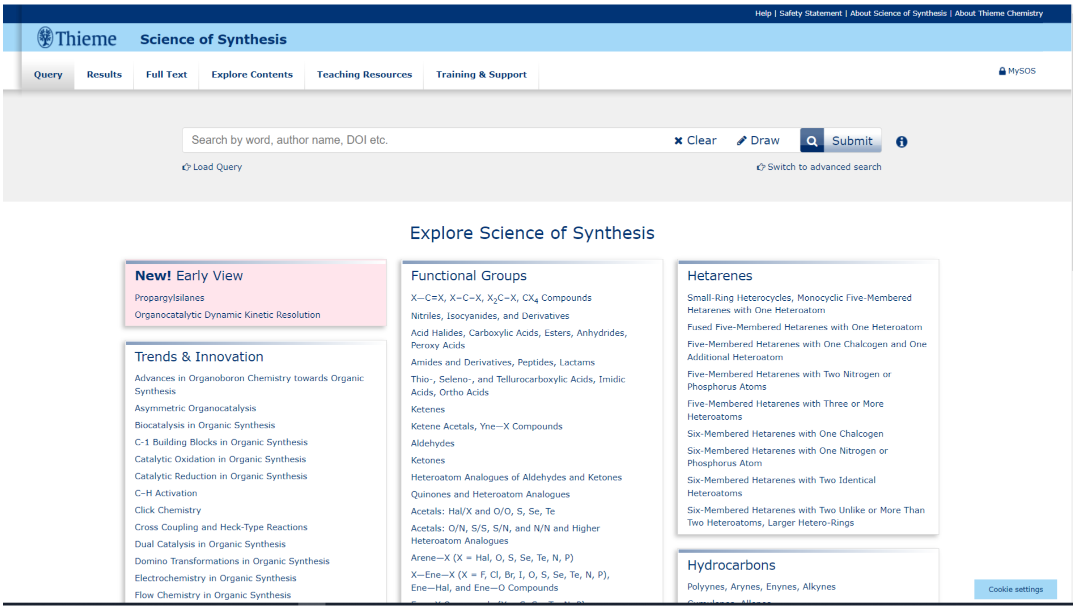


Early View Articles

Coming Soon!

Read selected new SOS reviews as soon as they have been edited.....no need to wait for a whole volume to be complete.

New SOS content will be released more often, allowing you earlier access to expert reviews of some of the most exciting and dynamic areas in organic chemistry.



To be informed every time new content is released, sign up for the *Science of Synthesis* Alerts **here**!
You will then receive an email whenever new content is added to SOS
